30,095. I think you have something to say as to co-operation in farming?—Yes. With regard to co-operation in farming, as far as it has been attempted to be applied to arable farming, so far as I know it has not been successful. The margin for profit in regard to the cultivation of the soil is so very slender that there is no room for extra cost; and one cannot afford any book-keepers or any person of that kind; indeed, the margin is often the wrong way, and then, when the margin goes the wrong way, how is the co-partnership to be managed? Although it has not succeeded in regard to the cultivation of the soil, it has succeeded to a wonderful degree in regard to sheep-farming. I may say that on the borders in the North of England, and also in many counties in Scotland, the shepherds are all partners with their masters, and they get no money payments. They have so many sheep of their own, which go with their employers' sheep, and the householders have two cows, a patch of land for growing potatoes, and some land to grow hay for their cows. These men are very great successes, both for their employers and for themselves. I suppose possessing this property has given them habits of providence. They have mostly saved money to a considerable extent. For instance, I had an old shepherd died a few years ago who left 1,600*l.*, and I have several on my farms now who, I expect, have saved more than 1,000*l.*; not that they have such very high wages, for at present, when the prices of stock are low, they do not make very high wages, but they have got provident habits. They are the most skilful employés I know of in any industry whatever.

Co-operative sheep farming.

30,096. Would you say that the system improves their qualities as shepherds very much?—To an extraordinary extent; they are so intelligent, and the children soon begin to take an interest in the work.

30,097. How long have these co-operations existed?—Much longer than I can tell about.

30,098. Is it a common practice in Northumberland?—Yes, it is quite general. There are very few shepherds who have not their wages in that way. I may say that I have 12 shepherds in Northumberland, and 11 of them receive no money whatever from me. They are all partners.

30,099. How many members of a co-operation are there as a rule?—They are not members of a co-operation; it is merely that these shepherds are partners with their master. That is, they have so many sheep amongst the master's sheep. There is no further co-operation than that.

30,100. Take an average sheep farm; how many shepherds would be employed on it?—The size of sheep farms differs very much, perhaps an ordinary sheep farm might require three or four shepherds.

30,101. Take your own farm?—I have got a great many farms. I have 12 shepherds altogether, but then I have got five farms in Northumberland.

30,102. Twelve shepherds for 7,000 or 8,000 acres?—Yes, and they are all partners except one.

30,103 Is it optional with them whether they will join or not?—They are all willing to join, and they have mostly all capital to put on sheep. It would be almost impossible to start a thing of that kind at present, when times are bad, because the men would not have capital to do it.

30,104. (*Mr. Little.*) Has not the number of shepherds who are content to be paid in this way diminished very much?—No.

30,104*a*. Not in Peebles and Selkirk?—I do not know Peebles and Selkirk so well as the more adjacent counties, but it has not diminished. A few years ago there were some greedy farmers—I thought them very greedy—who rather grudged the shepherds the big wages they were making with their own sheep, and who reduced their shepherds to money wages, but these men, since the prices of sheep have gone down, would be glad to go back to the sheep partnership again.

30,105. (*Viscount Cobham.*) How do you fix the number of sheep they have?—A householder has the keep of 63 sheep, and he has the keep of two cows, and as I have said, he has got a patch of potato land, and he has got some land to grow hay for his cows. A single man, who lives in a house with a householder

Mr. H. H. Scott.
6 July 1894.

probably, gets the keep of 48 sheep as a rule. Those who shepherd on low country farms, where the class of sheep is different (I have been talking of hill—Cheviot—sheep), and where the stock is of a different nature, get much fewer sheep, so that it would only be delusive to fix on any special number. It depends on the quality of the sheep and the breed of the sheep how many they have.

30,106. (*Mr. Elton*) And the district?—Yes.

30,107. (*Viscount Cobham.*) Are they liable to dismissal like other servants?—Quite so, but they are not dismissed as a rule; they are very likely to remain in the same place, and their sons follow them, because they are such good men. There is no fault to find with them; they are honest, trustworthy, and intelligent, and they have got such skill that it is almost like hereditary instinct.

30,108. Do you not find a difficulty when their wages fall to a low level in consequence of a bad year?—We have not. Just now the prices are as bad as they possibly can be, as bad as we have ever known them, but we have had no difficulty. Possibly, if the present low prices continue for any length of time, the matter will have to be reconsidered as to whether a shepherd should not have more sheep.

30,109. Do you think that the system has distinctly improved the quality of the servant?—In the most striking degree. I do not know of any such success elsewhere. I do not know of any people I have come in contact with, in any class whatever, rich or poor, who are superior to the hill shepherds on the border counties. I think, considering their chances, they are the best people I know; I have always thought so. I have never seen any people so honest, so intelligent, and so skilful as employés.

30,110. (*Mr. Little.*) May I ask you whether it has not been found where a farmer has given up the shepherd's pack that the farmer himself is unable to keep any more sheep than he could before?—It has often been found so. The farmer, as you say, has thrown it up, and has not allowed the shepherd his sheep, but he has found from sad experience that he is able to keep no more sheep than he kept before, although the shepherd's sheep have been put off the ground; that is because he gets less skill.

30,111. The shepherd, being the owner of some of the sheep, exercises more skill in choosing pasturage, and so a larger flock can be kept?—That is so.

Reduction of rents.

30,112. (*Sir Nigel Kingscote.*) I think you said that, generally speaking, in Northumberland the rents have been reduced by the landlords about 25 per cent.?—Yes.

30,113. Do the tenants find it hard even now, with a 25 per cent. deduction, to meet their rents?—They find a difficulty in meeting their rents.

30,114. But you think a fairness has been exhibited on the part of the landlords in reducing the rents as they have done?—I think so. Perhaps I should explain this, as it may not be so evident to every one who is not connected with farming; some people have an idea that if rents fall 20 per cent., or say 25 per cent., and farm products fall 25 per cent., that the whole thing is balanced; but that is not so, unless there is an equal fall in wages and other expenses, because the rent is only one-third of the whole expenses. There is a prevalent idea that if rents fall as much as the fall which takes place in agricultural products, the tenants are on as good a basis as they were before, but that is not nearly so, because there are other expenses as well as rents—there are wages, and so on.

30,115. And labour, you say, has rather increased, if anything?—It has rather increased.

Sheep and cattle breeding.

30,116. I suppose, in the large way you farm, you do everything—you breed, and buy in, and sell out—or is it chiefly breeding that you go in for?—As I happen to farm, I scarcely buy anything except a few males; I breed everything. But I think I do that more than most people. I do not buy, as a rule, any cattle or sheep.

30,117. How do you generally sell your cattle or sheep?—I breed them on some farms, maintain them on others, and finish them off on others. Having so many farms I put them to different purposes, so that I breed the calves and the lambs and finish them off by selling them fat.

30,118. Do you sell them by weight?—I do not sell them by weight. I would like very well to see selling them by weight introduced; but there has not been much progress made in Northumberland in selling by weight. I suppose the farmer is rather conceited to think that he does know their weights, and the dealers do not approve of buying by weight; they would rather have the speculative element of taking their chance of getting an advantage possibly.

Mr. H. H. Scott.
6 July 1894.
Sale by live-weight.

30,119. Do you think, speaking generally, it would be to the benefit of the farmer if cattle were sold by weight?—It would to a certain extent, but not to a very great extent.

Slaughter of foreign cattle.

30,120. As regards cattle diseases, have you suffered much in former days from diseases?—We used to suffer a great deal from foot-and-mouth disease at one time, but it has been so well kept under now that we have not had a visitation for many years. There is less pleuro or other disease in the country now than I have ever known; that is due to the measures taken to keep out foreig. cattle, and other measures, such as slaughtering when there is any disease.

30,121. Do you desire to see the restrictions relating to the slaughter of cattle at the ports continued?—Certainly, I desire it ardently; I think it would be a great pity to do away with it.

30,122. In the interest of the farmers?—In the interest of the farmers.

30,123. Although sometimes it makes store stock a little dearer, it would be in their interest to have sound cattle, and to have no risk from disease?—Yes, certainly it would; it discourages breeding and farming generally when there is disease.

The Agricultural Holdings Act. Payments of compensation.

30,124. (*Mr. Clay.*) I think it was a very clear and plain definition that you gave of the Agricultural Holdings Act, and there is not much left for me to say to follow out your suggestions, but there are one or two points I would like to ask you upon. Your principal contention is, that the Act has not given sufficient compensation to keep up the fertility of the soil, generally speaking?—That is so; I think that the Act is of too hard and fast a nature. I think there is not much allusion to condition, and that it would be a great advantage if condition were valued, it would have such a good effect upon farmers in making them try to keep their farms in condition. What I am looking at is, the good of the farmer, and the good of the country generally, but particularly the good of the farmer; and I think in trying to benefit himself by keeping his land in condition, he would benefit the consumer as well, for he would produce more.

30,125. Then the question comes to this, that the man who has been only using cakes and manures for the last two years of a lease—call him the bad farmer—has been paid equally well, or perhaps more than the man who has been a really good farmer all through the term of the lease?—That is so, as I tried to explain. The good farmer does not require to put on any excess at the end of the time; he has got his land into good condition by farming consistently well throughout, and he does not require any excessive quantity applied during the last few years, and he does not require to buy an excess of artificial foods; therefore, he may use less than the bad farmer in the last few years; I would not put it so short as two years, but I would say the last three or four years, in which compensation is paid.

30126. But, the farmer who complains and gives in a claim for compensation should be able to show receipts for cakes and manures, and other articles which he has used on the farm for a good few years before?—I think he should be compelled to show vouchers for what he has spent upon the farm; but I would like to see an Act of Parliament which did not take these bills or vouchers as the exact basis on which he was to get compensation.

30,127. I do not mean to take the bills as a basis, but I only mean him to use the bills before the Official Referee, or whomsoever they are put before, as evidence that these things have been used, and then the Official Referee can use his own judgment on them?—Yes: I quite approve of that, because that would be an element to show that he was keeping the farm in condition.

Compensation for consumption of home-grown corn.

30,128 This point has not been touched upon by you; what is your opinion regarding the use of corn which is grown upon the farm?—I am sorry to say that I am

Mr. H. F Scott.
6 July 1894.

in rather a difficulty about the question. It would be so difficult to find out, or to check the use of home grown corn upon a farm, that it would be very difficult to put that into operation. Further, I do not think it is of so very much consequence, because the tenant may sell his corn, and he can buy much cheaper foods at present, in the form of maize and cake, than the home-grown corn he would sell, so that he gets rid of the difficulty by selling the home-grown corn, and buying these other foods, if he wants compensation; but if compensation were more on account of condition, rather than on the use of artificial foods, it would not make so much difference.

30,129. He may not exactly claim compensation for the corn that he has used upon the farm, but the proof that it had been used might also, the same as the receipts for foreign manures, be evidence which would go to strengthen the Official Referee's opinion about what has been used?—Yes, I think it would be very well that he should give evidence that he had used a certain quantity of home corn, but it would be rather difficult, I think, to give him compensation on such hard-and-fast rules as are in the Act for the home-grown corn which he said he had used at home. He has to keep an account, and how is it to be kept? I daresay farmers are as honest as other people, but it would be rather too much to trust them all to keep such accounts; they are not very good account keepers, at any rate.

30,130. Your opinion, then, would be that so far, if there were a sufficient check upon it—I grant you there are difficulties in checking it—you would have no objections to the use of this corn?—I do not think I would.

Notice of claims.

30,131. Regarding the claims, the tenant must make his claim on the landlord, according to the English system, two months before leaving, but in Scotland, as I think you understand, it is four months?—Yes.

30,132. A tenant has no chance of making up his claim four months before he quits, has he?—No, he has not; nor has he two months before, either; at least I cannot see how I could make up a claim. I have not yet had the misfortune to make one, for I have not been a quitting tenant, but I do not see how one is going to calculate beforehand exactly how much artificial food and manures one is going to use up to the date, so that I think it would be quite soon enough if the claim was put in at the time of quitting. I do not see why the landlord's claim should be later than the tenant's.

30,133. I am glad that you have not had the misfortune, but I think you know I have had the misfortune to face the difficulty in the House of Lords on this matter?—So I believe.

30,134. They have decided that the end of the tenancy was not until the way-going crop was removed from the ground?—That does not apply so much to England, I think, because there are not so many way-going crops; the terms are so different.

30,135. Still that is a point now fixed, that you do not require to make up your claim before you have used all your feeding stuffs that you have upon the farm until after Whit Sunday, the removal term of the grass in the fallow?—I saw an account of it.

Co-operation.

30,136. You have talked very largely about co-operative farming, especially for shepherds in a sheep farm?—Yes, I have, because I have been very anxious always to devise a mode in which the same system could be applied to cultivating the soil, but I am sorry to say that I have not been able to devise any system, and that I have not seen any devised which has been very successful. I suppose some day there may be a mode found out to make it co-operative, because these shepherds are so much superior to the class that work for us on the arable land.

30,137. I do not think you could have paid a higher compliment to any class of men than you have done to the Cheviot shepherds, and I think they are justly entitled to it for their care, their intelligence, and their industry in guarding their master's stock and their own at the same time; so that you may be perfectly satisfied that there are no other persons you have come across like the Cheviot men?—That is so.

30,138. You have never come across another class of men like the Cheviot shepherds?—No; they are the best class of employés I have ever come across, so you will see that for that reason I would be so anxious to see it applied to the arable department, if I could.

30,139. (*Viscount Cobham.*) Do they often rise to become sheep farmers on their own account?—Yes, a number of them do.

Mr. H. H. Scott.
6 July 1894.

30,140. (*Mr. Clay.*) I think you have given very important reasons why the law of distraint should be abolished; is it your opinion that it has assisted neither the landlord nor the tenant to have it hanging over their heads?—As I have stated, there is no good at all in the remnants that are left—they are so seldom acted upon—even looking upon it in that light.

The law of distraint.

30,141. (*Mr. Gilmour.*) Is there much competition for these farms in Northumberland, just now?—Yes, there is very good competition. I have not been so speculative as to try and find out the reason, but there is good competition for farms. If you will allow me to mention my own idea, I think it is this, that people have come to see that things are so bad that they think there must be some hope of improvement in them; I cannot account for it in any other way: there is a certain hope, no doubt, in the breasts of agriculturists at present.

Competition for farms.

30,142. From what you have said, do you believe from the rents these men are paying through that competition, they are not likely to be successful in the farms they have taken?—I do not know that I have quite said that.

30,143. I am judging from your own account that there is much competition for farms, and I suppose the rents certainly are not falling?—The rents have fallen considerably of late years, but they are not falling this year from what they were last year, by any means; I think it is rather the opposite way, but the rents have fallen, and taking a longer period, I say they have fallen 25 per cent.

30,144. Has this competition forced the rents of those farms up to such a figure that you consider these men have not a chance of being successful?—It is impossible to say. After one has been some years farming, as I have been, I find it very difficult to go into futurity. The times might improve, and the people might succeed, but if the times did not improve, probably they would not be very successful.

30,145. Have you heard of a proposal to lessen that competition by allowing a man to take only one farm or holding of a certain size?—I think I have seen it in print, but I have not heard of it in any reliable quarter.

30,146. Do you think that would be a practical mode of dealing with such a matter as letting farms?—I think that would be a mode of depriving agriculture of much of its capital.

The currency.

30,147. Has your club considered or discussed the matter of the present condition of currency questions?—Yes, to a certain extent. I may say that I took a great interest in that question a few years ago, and I found it a very knotty one. Then I came to the conclusion that there were abler brains than mine to work upon it, and I would let it alone as I have a good deal of other work on hand, and so I have grown rather rusty upon it.

30,148. I see, that according to Mr. Wilson-Fox's Report, you stated very plainly that you considered that the appreciation of gold exercises a very great influence on prices, and that you put a good deal of stress upon that?—Yes, whether it is a crude notion or not, I have certainly an opinion that the appreciation of gold has decreased prices. But the remedy I am not so sure of, whether it is bi-metallism or what it is. If my own opinion is worth anything, I think it would be a most sensible idea for the Bank of England to issue 1*l.* notes, and let gold lie as a reserve—the purpose for which it should be used. At any rate in that way we would save a good deal of the waste of gold, which takes place in circulation, I mean waste or wearing down of gold. I forget how much it comes to in a year, but it is a very considerable sum, and if the gold merely lay as a reserve probably it would not waste so much.

30,149. Do you think there is, in your part of the country, a desire to know more about this question among agriculturists?—Yes, there is certainly. Some agriculturists have thought a good deal about it, and spoken a good deal about it, but generally I do not think it is a subject that is understood by agriculturists.

30,150. Therefore you would consider it is such a subject, probably, that every opportunity should be taken to place it in a plain way before agriculturists, so that they might have a chance of understanding it?—Yes, I think that is so; they should understand it like all other subjects.

Mr. H. H. Scott. 6 July 1894.

30,151. Your object in advocating anything of this kind would be to raise prices?—That is so, if prices could be raised without doing damage to any other industry, or any other employment.

30,152. Do you think that could be done without affecting the interest of the working classes of the country?—That is just the point, there are so very many points of difficulty, that the more I have thought of the subject the more difficulty I have got into in regard to coming to a decision on bi-metallism. I happen to know one or two gentlemen who are very much interested in this question, whom I have heard lecture upon it, particularly Professor Nicholson of Edinburgh, who is a great friend of mine, and I am sorry to say—it was, perhaps, want of ability or brains—that the thing is not so clear to me as I would like it.

Prices and production.

30,153. (*Mr. Little.*) It has been suggested here that low prices do not decrease the production, is that according to your experience? I think that you gave evidence that you grew less because you reduced expenditure, and it was not worth while to spend money in order to farm so highly?—On account of prices being so low, there was less expenditure in trying to get increased production, that was so.

30,154. If that be the case very generally, then low prices must tend to diminish the amount produced?—Certainly. If there had been high prices there would have been much more produce. My idea is, in fact I am quite sure of it, that we could produce all the beef and mutton that is used in these islands, if it were at a certain price. I made some intricate calculations a year or two ago for a paper I was going to read, and I found out that under present circumstances you could produce beef at 7*d.*, and you could produce mutton at 6¼*d.* a pound, but that under those prices you could not produce them at a profit. I think these figures must be nearly correct, because we find that whenever prices go above that ratio the breeding of cattle and sheep increases, and whenever they descend below that breeding decreases.

30,155. At any rate farmers generally have an opinion that it is a greater economy to reduce expenditure than to increase production?—That is so, with the present low prices.

30,156. If 30*s.* spent on cultivation and manure would produce a quarter of wheat, it is scarcely worth the farmers' while to spend 30*s.* when wheat is at 24*s.*?—That is so; we cannot grow the wheat at 25*s.* a quarter, as it is at present, without a loss.

Labour.

30,157. You said that the labourer had deteriorated, and you gave us as one of the reasons that cows are not kept to the same extent as they were formerly; can you account for the labourer ceasing to keep cows?—Yes; at one time the labourers were paid a good deal in corn, and by allowing them a cow; but their ideas changed when they got money payments, and they thought that they would not have cows, and that they did not want them. I have always tried to give my people a cow, and in fact to buy a cow for them. I am so anxious for them to have cows on account of the good it does the families. But now the women part of the family do not care to have the trouble of milking a cow, and looking after a cow.

30,158. The difficulty is not on account of the farmer then?—I am sure there is not a difficulty on the part of many farmers. I think I am perhaps rather exceptional on this point.

30,159. Mr. Wilson Fox, reporting to the Commission on Labour, rather leant to the idea that the difficulty rested with the labourer than with the farmer?—I think I would put it so too, perhaps I spoke too strongly when I said I was exceptional; I should have said they might not all be equally anxious.

The Agricultural Holdings Act. Official valuers.

30,160. In regard to the Agricultural Holdings Act I think one of your objections was the expense attending arbitrations under the Act?—Yes, the expense is extreme. There are so many witnesses to be called that there is no end to the witnesses. For that very reason, in order to cheapen the thing and make it less expensive, I suggested official referees or valuers, who would not require so much evidence; in fact I expect like school inspectors they would be able to appraise the value without much evidence, and I would hope that their decisions, like those of the school inspectors would be quite uniform; it would be just appraising merit in agriculture instead of appraising merit in education.

Mr. H. H. Scott. 6 July 1894.

30,161. The scheme which you formulated contemplates the employment of a number of professional valuers, who are to be confined to that particular work and paid a fixed salary by Government?—It is my idea that it would be better that these inspectors or referees or arbitrators—or whatever they are called—should have nothing to divert their minds from their work. I do not think their decisions could be equally uniform or skilful if they had other work to divert them. I think they should be, as it were, inspectors, and in that way we would have them as a first court, and then if there was an appeal it would go to three or four of them, or whatever number should assemble together, and it would be decided by the majority. That would cheapen the whole process, and do away with the expensive part of the process.

30,162. These valuers would have to be highly paid men, I suppose?—They would have to be men of good position.

30,163. But would that not be shifting the expense from the parties to the State?—It would come to very little, because for an inspection of a farm I would propose that there should be a small fee per acre.

30,164. Do you think that would really reduce the total expense?—Immensely, I think. The expense just now is very serious, and a small farmer cannot afford to go in for it.

30,165. How could these experts dispense with evidence; how could they find the facts without evidence?—We know that sometimes a good deal more evidence in these cases is given than is necessary. When a case gets into the hands of legal gentlemen, they are very fond of evidence, but we would hope that the official referee would not be equally fond of it.

30,166. But there is no necessity for a legal gentleman, is there?—There would be no legal gentlemen as I propose it.

30,167. There is no necessity now?—There is, generally; in all the big valuations in our country legal gentlemen are present representing the parties.

Notice of claims.

30,168. Then upon the question of the two months' notice, you say it is impossible two months before quitting to give a proper notice of claim, but that notice is only to be so far as reasonably may be the amount of the claim?—That is so.

30,169. Is there any difficulty in adding to the claim for subsequent consumption?—I suppose that can be so corrected, but I do not see what is the need of hurrying the man; I cannot see the reason of hurrying the claim forward two months before the time of quitting.

30,170. That is one point; the other point, as I thought you seemed to think, is that a man could not possibly make his claim?—That is so.

30,171. He cannot make it exactly, but he can describe the nature of the claim, and he can—it has been held by every commentator on the Act, I believe—add to the amount according to his subsequent use?—I believe that is so, but there have been difficulties. It has been stated that the notice was not definite enough. I do not see that there is any necessity for the notice.

30,172. You think the two months' notice might be dispensed with, and that the claim might be made at or about the time of quitting?—I think so.

Time limit for compensation.

30,173. Then, another complaint that you make is that it treats good and bad tenants alike; is there anything in the Act that you can point to which limits the compensation for use within a definite period?—There is not; but the practice, or the application of the Act, has been that outgoing tenants have been paid upon outside manures or artificial foods brought on to the farm or applied to the farm, and in that way a good tenant may not have got more than a bad tenant, because he may have had the farm in good order before. That was my contention.

30,174. The complaint is rather against the way in which valuers have administered the Act than against the principle of the Act; the Act does not limit the compensation to any particular time?—I think it limits compensation to particular acts, or applications of certain things.

30,175. But with regard to those things—say the use of cake—one man uses cake for four or five years, and you argue that he improves his land to a greater extent than another man using cake for two years only, but that in practice they would both get compensation on

the same scale?—I should put it on the working of the Act, as interpreted or as practised.

30,176. That is the Act as it is administered by valuers; you complain of that?—Yes, and there is nothing given for increased fertility.

Scheme of compensation.

30,177. In the scheme of graduation which you, I believe, drew up, you assumed that the improvement was made within a certain period, and the compensation was based upon the original cost, with so much deducted for each year unexpired?—Yes.

30,177A. You assumed that an improvement would last for so many years, and you based compensation upon the original cost?—I do not think that that classification is perfect; I do not think it is sufficient.

30,178. (*Mr. Channing.*) In your original suggestion, I think you classified these improvements?—Yes.

30,178A. (*Mr. Little.*) In addition to those you divided farms into three classes; first, second, and third, and you gave the highest compensation to the first class and the lowest to the third class?—That is so.

30,179. But still you believe that system is not sufficiently elaborated?—No, we do not think it is.

30,180. But continuous good farming ought to be recognised to a greater extent than it is by any such scale?—Yes; increased fertility of the soil should be recognised.

30,181. Produced by continuous good farming?—Good cultivation, skilful farming, and the liberal use of artificial foods and manures.

The law of distraint.

30,182. About the law of distraint, are you not aware that your cattle could only be distrained upon for the amount of the price which you had agreed to pay for the keeping, and that the landlord could only recover upon those cattle the price that you had agreed to pay for the keeping?—I was going to prepay the price that I agreed upon.

30,183. Then he could only recover so much of the price that you had agreed to pay as was still unpaid?—Then he could not have recovered any of it; I must have been mistaken, and more than that, a lawyer must have been mistaken.

30,184. It seems perfectly clear by the 45th section of the Act of 1883, that your stock would have been exempt: "Where live stock belonging to another per-"son has been taken in by the tenant of a holding to "which this Act applies, to be fed at a fair price "agreed to be paid for such feeding by the owner of "such stock to the tenant, such stock shall not be "distrained by the landlord for rent where there is "other sufficient distress to be found, and if so dis-"trained by reason of other sufficient distress not "being found, there shall not be recovered by such "distress a sum exceeding the amount of the price so "agreed to be paid for the feeding, or if any part of "such price has been paid exceeding the amount re-"maining unpaid, it shall be lawful for the owner of "such stock at any time before it is sold to redeem "such stock by paying to the distrainer a sum equal "to such price as aforesaid, and any payment so "made to the distrainer shall be in full discharge as "against the tenant of any sum of the like amount "which would be otherwise due from the owner of "the stock to the tenant in respect of the price of "feeding"?—If that is so, and I have no doubt it is as you say, I was under a mistake, for I did think, and have thought all along, that if a man prepaid rent, and if there was a distraint by the landlord, he had to pay the rent over again. It is rather curious, but I am not the only man to think so, for my lawyer is under the same mistaken impression.

30,185. (*Lord Rendel.*) The stock would be liable to distraint?—It would be, evidently.

30,186. Although the distrainer might, under the Act be unable to recover anything upon such distraint, the fact would be that your cattle would be liable to distraint, and your lawyer, in advising you that the stock would be liable to be distrained, was advising you within the meaning of the Act?—Yes, but there would be no results in the way of having to pay.

30,187. Nothing but the expense and inconvenience?—Apparently that would be so. I am sorry that I was under a mistake.

Description of farms.

30,188. (*Mr. Chaplin.*) What is the character of the farm that you occupy in Northumberland?—I happen to occupy five, some of them hill farms, some of them combined hill and fields, and one of them fields altogether.

30,189. Would the same description apply to the farms you occupy in the north of Scotland?—No, they are altogether sheep runs.

30,190. Purely sheep farms?—Purely sheep runs.

The depression in Northumberland.

30,191. In Northumberland they are what?—Partly arable, partly hill, and partly old pasture.

30,192. I observe you say that the depression has existed since 1875?—To a certain extent.

30,193. But is more severe of late years, and that last year was the worst of all. What was the cause of that? I thought that in the north of England the depression had been less severe?—When I mention a year, it does not quite mean from the 1st of January to the 1st of January, because we generally balance our accounts at the end of June, so that "last year" would be up to June of the year past, not this last June. The prices of stock were so very bad on account of the drought all last year that it was the worst season we have had for a very long time—the worst season we have had in my time, certainly.

The currency.

30,194. You said in your evidence in chief that although the fall of prices was the main cause, there were other causes of depression, and amongst them you named the increase in the price of labour. Is there anything in addition to that which you want to put before us as a cause of depression?—Yes, I have thought that the appreciation of gold had a considerable effect upon prices.

30,195. I observe that in the Report of our Assistant Commissioner, Mr. Wilson Fox, you met him on one occasion and you expressed that opinion, he mentions you by name?—Yes.

30,196. I think you expressed the opinion that the depression was greatly due to the appreciation of gold, and that this subject was much overlooked by those who discussed the causes and remedies of agricultural depression; is that your opinion?—That was more my opinion probably then than it is now. The more I worked at the subject of bi-metallism the more I got doubtful about it. I suppose my brain was not clear enough to take it in, or something. Consequently my opinions are not quite as strong now as they were then; but still I am under the impression that the appreciation of gold has done very much to lower prices.

30,197. Is that a subject which is beginning to engage attention among agriculturists in your part of England?—Yes, there is a certain very limited number, I think I am amongst that limited number, but it is only a limited number, I believe, that take any trouble to think about it.

30,198. Would you say it was growing in interest?—I really could not be quite sure. I think, perhaps, there was more excitement about it a little while ago than there is now. I would like to be correct in anything I state in this matter; perhaps I am talking of my own feelings a good deal.

Compensation for improvements.

30,199. With regard to the question of land tenure, I understand you that if farmers were assured by law of receiving compensation for improvements that is all they ask for in your district?—That is all they would ask for; we do not want any fixity of tenure or anything of that kind, we only want to know that we will get full compensation if we improve a holding, and that a man is never to be denied full compensation, and that he may get it cheaply and easily; then there will be a tremendous improvement in farming.

30,200. You want, in fact, a really effectual Agricultural Holdings Act?—That is so.

Land courts.

30,201. But you do not recommend the appointment of land courts to fix rents or to give fixity of tenure?—No. I recommend official valuers, but I think they should have nothing to do with the question of the amount of rent.

Compensation for deterioration of farms.

30,202. You also maintain that the farmers ought to be compelled, and they ought to know that they would be compelled, to pay compensation for the deterioration of their farms?—I think as a clause should ensure the tenant compensation it should also ensure the landlord compensation, if there has been deterioration of the holding by the acts of the tenant.

30,203. Do you not see a considerable difficulty in ensuring that compensation to a landlord in the case of a tenant who has farmed badly, and got his farm into bad order, and who gives notice to go; the probabilities

Mr. H. H Scott.
6 July 1894.

are very often, I think, are they not, that it would be rather like getting blood out of a stone?—That might be so; but probably other people might lose by the tenant as well, and the landlord should not be exempt from losing. If the landlord does lose he had a good deal to do, probably, or his agent, in putting the tenant there, and he should have made a better selection, it might be said. There is no reason why his claim should be preferred, or that there should be any preference whatever in getting what the tenant owes him, and one of the matters due might be a depreciation to the holding.

30,204. And even in a case where it has not been a matter of selection, we will say, where a tenant has been on the farm, or his family, for many years, would you say that the landlord has been somewhat to blame for having allowed things to go so far without interference?—I should say he has been. I do not see that there is any good in any landlord showing such an excess of mercy as that, because it is not likely if the tenant is so bad as that, and has got his farm wrong, and his pockets empty, that he is ever going to recover, and it is only keeping him in misery—the bad day will come for him.

30,205. Surely there are a good many cases in these days where deterioration of a farm is really owing more to want of funds than to indolence on the part of the tenant, are there not?—If the landlord lost the compensation, is that not what you mean, that he would not be able to pay it?

30,206. Yes?—If the landlord lost it in that case it might be on account of his having to obtain too much rent for the land, and that made the tenant so poor; so that the landlord would not be very much to be pitied even if he did lose some of the compensation for deterioration.

30,207. That is not altogether what I meant. Your evidence pointed to this: That if a farm was going the wrong way, we will say, the landlord must not be disappointed if he loses when the tenant goes, and he has no right to complain because you would say that he ought to have interfered and stopped him before?—I would say so.

30,208. Would not that be rather hard in some cases where a tenant has been losing money, and where the farming is less well done, not because of indolence or neglect, but because really he has not the means of doing it better?—I suppose he has lost his means.

30,209. Yes, and a landlord would naturally wish to give him a chance if there was any prospect of times improving?—I think it would be very well that he should have his chance, and it would be very good of the landlord to give it to him, but I cannot see that the landlord is to be very much pitied if in the end he does not get the compensation.

Notice of claims and counter-claims.

30,210. Now, upon the question of notice for compensation for improvements, is there any necessity for any notice of claim being given?—Prior notice?

30,211. Take the case of a tenant who is leaving a farm. He is quite certain to be entitled to receive compensation for some improvements, at all events. Is there any necessity in such a case for a tenant being compelled to give notice that he is going to make a claim for improvements before the time comes when he has to leave?—No, I think not if it had not been for the counterclaim the landlord has to put in; but as the Act goes now the landlord only puts in a counterclaim if there is a claim made by the tenant, so I suppose that is the reason of the notice by the tenant, so that the landlord may know whether to put in a counterclaim.

30,212. Do I interpret your view correctly to be this: That a tenant ought to be able to make a claim for compensation for his improvements at any time that he pleases before quitting, and that a landlord ought also to be able to give notice of a claim for deterioration?—Yes.

20,213. Both irrespective of each other?—That is quite my opinion; the landlord should just have equal rights with the tenant to make a claim. I think the time would have to be limited in which a claim would be made—whether it would be the day of quitting or whether it would be two months after, or when. I do not know the best time.

30,214. Have you any suggestion to make upon that point? Of course there must be a limit; what should that limit be?—I think the limit might be a matter of almost weeks after quitting. I think it should be very close.

Mr. H. H. Scott.
6 July 1894.

30,215. That the claim on either side ought to be made within a limited time after quitting?—Within a month, say.

30,216. But apart from that there is no real necessity for any notice being given at all?—No.

30,217. I want to know whether you see any objections to that?—I see a necessity for it as the Act is at present, because the landlord cannot know whether to make a counterclaim unless he receives notice.

30,218. I am assuming that the Act might be altered?—If it were altered, at first sight I do not see any reason why there should be any notice of claim.

30,219. (*Mr. Channing.*) Did your not express an opinion in favour of notices on both sides being given on the same day?—At the same time. There is no reason why one should be earlier than the other. I did not mean that it was necessary to fix on any certain day. There is no reason why the landlord's claim should be later than the tenant's if it is done away with as a counterclaim.

30,220. (*Mr. Clay.*) The fact of the matter is that it comes to this: That the tenant and the landlord could give in the claim on the same day, and need not see each other's claims until lodged?—I think that would be an important improvement.

30,221. (*Mr. Channing.*) Even so you would have to fix a day for the notice, otherwise it would defeat itself?—Yes.

30,222. (*Mr. Chaplin*) Then in that view you would think that there must be a notice?—I would correct that. I said, "at first sight." I think now it will be better that a certain day should be fixed, and I agree with what Mr. Clay says, that neither should know what the other's claim is.

30,223. Either party to make their claim independently of any knowledge of what the other party is going to do?—Entirely.

Basis of compensation.

30,224. With regard to compensation under the Act, at present the basis of that compensation is the value to the incoming tenant, is it not?—That is so.

30,225. I want to ask whether, in your opinion, it would be better or not, that instead of the basis being the value to the incoming tenant it should be the outlay, or some proportionate part of the outlay, which has been made by the outgoing tenant?—That is the Act now, as I understand it. Such improvement as has taken place by the application of certain manures, or the use of certain foods, and at the value at which it is to the incoming tenant.

30,226. Would there be any difference in putting it the other way?—Yes.

30,227. Are you asking me that?—Yes. I do not quite see the difference of putting it the other way, because it is the outlay by the outgoing tenant.

30,228. As a matter of fact, I apprehend that is the way in which the valuations usually are conducted, but where farms are not held under the Agricultural Holdings Act they are sometimes held under agreements, or under certain customs in different counties, which provide that the outgoing tenant shall be allowed for a certain specific portion of the same expended on certain improvements?—I think that is more objectionable than the present Act. The fault I find with the present Act is that it is on too hard and fast a basis, and that it does not sufficiently take into account the improved condition or fertility of the soil. If it were enacted that a certain portion of what the outgoing tenant had spent would be repaid to him, that would be still worse than the present Act, so that that would be going entirely against what I contend for, for I think the present Act gives too much for certain applications or certain things purchased, and too little on the principle of compensation for improvement and fertility.

30,229. From your point of view then it would be better in framing any fresh legislation, or any amendments of existing legislation, to adhere to the principle of the existing Act with some extension of it?—Yes, with a considerable extension as to fertility and with improvements in regard to the operation of the Act in order to make it cheap, by having official valuers, say.

Mr. H. H. Scott.
6 July 1894.

30,230. (*Mr. Dalton.*) I think you said that the year ending last June 12 months was the worst year you have had?—Yes.

The seasons.

30,231. What sort of year has it been during the last 12 months?—I have not made up my books yet, and I do not know whether I will get out of paying the income tax for another year or not, but the profit will be very small, if any, I think.

Average rents.

30,232. What are the average rents per acre in your county of hill farms and the other farms?—I do not think I could answer that question at all usefully, because sometimes the rent is not 2*s.* 6*d.* an acre of hill land, and sometimes hill land may be worth 10*s.* an acre.

30,233. Can you give me the maximum and minimum in each, would the hill land be from 10*s.* to 2*s.* 6*d.* the acre?—We always pay by the number of sheep that the land will keep. We know how many sheep each farm in the district will keep, and we know how much rent it is worth by the number of sheep, and we do not take into account the acreage at all. I had to go to my leases the other day to see my acreages, as I knew that I was to be examined here on the point. I had thought that it was no consequence what acreage I had, it was how many sheep I was able to keep.

30,234. In those parts of the county which are not hill land, what is the rent; what does it vary from?—From about 15*s.* to 30*s.* for the field land, I think.

Rates.

30,235. What are the rates now in the pound; I mean the total rates in your union?—Down at Alnmouth, where I have one farm, or part of one farm, they are very high.

30,236. What would be the high ones?—I think they are 4*s.* in the pound in Alnmouth, but in Rothbury, where I have another farm, they are not more than half.

30,237. They are very much less than that in Rothbury, are they not? I have a Return here, according to which the poor rate in Rothbury was only about 3*d.* in the pound in 1890 and 1891?—Was that a year when some handsome subvention came in from the Government?

30,238. It is the average of two years, 1890 and 1891?—That is one rate, it does not include the school rate.

30,239. It is the rate, excluding the precept rates; what is the highway rate?—The highway rate will be about 7*d.* probably.

30,240. And the county rate?—5*d.* or 5½*d.*

30,241. That would bring it to about 1*s.* 3*d.* in Rothbury; on your farm at Rothbury, what do they come to altogether?—I am sorry to say I did not look up this point, but I think the whole rates come to something under 2*s.*, perhaps 1*s.* 6*d.* It is more than 3*d.* for the poor rate; that must have been an exceptional year.

30,242. It was the lowest in England?—It is more than that on the average, if you take more than one year.

30,243. I have only got the average for two years?—I think it will be double that; I think it will be 6*d.*

30,244. Has it gone up as compared with what it was 20 years ago?—A little, but not much.

30,245. In a return here, I have, comparing 1868 with 1890 and 1891, I find that the average rural rates in Northumberland have fallen from 2*s.* 1½*d.* to 1*s.* 7½*d.* The figures for 1868 are taken from Mr. Goschen's return, and the other figures are taken from Mr. Fowler's return?—When did these heavy subventions from the spirit duties come in?

30,246. The first lot of increased subventions under the Local Government Act came in 1889, the spirit duties, I think, came one or two years later?—I think that must have exercised an influence, in fact, I know it did, on the county rate.

30,247. No doubt. You are rather of the impression, I think, that the rates in your county have risen to some extent?—So they have; I am speaking more, perhaps, of the Alnwick district; in Rothbury, I should think, they have not; they have risen to me in Rothbury, but that happens to be from a change of the law putting the parishes into unions.

30,248. According to the figures Mr. Wilson-Fox gives from the Alnwick, Berwick-on-Tweed, and Glendale unions, which you may have seen in his report——?—I saw them.

30,249. There seems to have been no rise?—Apparently not, from Mr. Fox's evidence.

Mr. H. H. Scott.
6 July 1894.

30,250. You say that the poor rates and the road rates were put on, you think, because of the protection duties in former times?—I think the burdens on the land were no doubt put on on account of the landed classes being protected against the other class by an import duty.

30,251. Surely historically that is not the case. Has not the expense of the roads always been borne by the locality, and by the land? Originally the roads were made by the owners of the land, and they have always been a burden upon the inhabitants, except in the days of the turnpikes?—I thought the burden was met by tolls.

30,252. The highway expenses were paid by the parishes very much earlier than any turnpike tolls, and the turnpike tolls were abolished long after the abolition of the corn duties?—Of course, I might have extended my answer by saying that in those days land was the source of the principal income, but now there are other sources, much greater than land, which do not get their fair share of the burdens; I mean shipping, and some other industries.

30,253. What would your plan be of making the other properties pay more?—I would make it an Imperial question perhaps; I do not know.

Government subventions.

30,254. You have got subventions?—And I disapprove entirely of subventions. I have a great deal to do with local matters, and I think subventions are the worst things in the world; they are lost sight of after a few years in extravagance and disappear. I object to them very much

30,255. What would you substitute for them? How would you bring the other property under contributions without subventions, because that is the difficulty?—I suppose there might be a general tax, might there not?

30,256. A local income tax?—No, an Imperial tax over the empire.

30,257. But if that was handed out to the local authorities, that would be of the nature of the subventions that you object to, and you could not have a local income tax, for though the point has been investigated a great number of times, the difficulties have been found to be insuperable?—Of course I cannot tell, not having gone into that matter.

30,258. But you do not approve of subventions?—I should think it is only fair that these other industries should pay part of the rates, because I suppose that ships make part of the paupers, and I do not see why they should not pay for them, when those paupers go to the workhouse.

30,259. To what union would the shipping contribute?—I have not worked out the thing, I am sorry to say.

30,260. For instance, taking a tax on consols, if you make consols contribute, what union would the money go to?—I have not worked it out.

30,261. But you are against subventions?—I am against subventions; I think that is the worst form in which we could get the money.

30,262. But you have no other form to suggest?—I did not think of working it out; it did not occur to me that there would be any very great difficulty in taxing such industries.

30,263. Take your own county of Northumberland; what property in Northumberland, apart from shipping, escapes taxation; the railways pay it, the mines pay it?—The shipping does not pay it, and shipping is a great industry. Personalty pays nothing, does it?

30,264. Railway property is personal property, is it not?—So it is, but a great many forms of personalty do not pay.

30,265. A great many do pay, such as railways, waterworks, canals, gasworks, and mines; but you have no other scheme?—No, I have not thought out a scheme of getting the money.

30,266. That has always been the practical difficulty, has it not, to give it in any way so that it is not an Imperial subvention?—Very likely.

Tenure of farms.

30,267. (*Mr. Channing.*) How do you hold your farms; on lease, or from year to year?—I hold three farms from the Duke of Northumberland, and there is no lease; I think it is half a year's notice, if I remember

Mr. H. H. Scott.

6 July 1894.

correctly; it is a year's notice in the Act, but it can be reduced to six months.

30,268. Then it is really from year to year by agreement?—Yes. Another farm I hold to the end of the century. It was a 21 years' lease. Then it was extended, and I hold it to the end of the century. But another farm I hold for two years from now.

Rates.

30,269. I understood you to say that your rates, I am not speaking of rates generally, but of the rates on your own farms, that you have to pay, have increased since you entered upon them?—I did not mean to say that they have increased much, because they have increased only very little, but I think the tendency has been for rates to increase. I am afraid I am not the best witness for that, because my rates have increased very much, but that is on account of the change in the law in putting a lot of townships together in a union for the working of the Poor Law.

30,270. Indirectly?—Indirectly they have increased very much; they have trebled, probably. My impression from my books is that rates for the last 10 years are higher than they were the previous 10 years, to a certain extent, but nothing of any importance.

30,271. But taking the fact that directly or indirectly the rates that you personally pay have increased, the question I want to ask you is, whether your rent has been reduced in proportion to the rates, and on account of that heavier incidence of the rates, either directly or indirectly with you?—No, I do not think there has been any increase in the rates sufficient to cause a decrease in rent. We would never think of asking for a decrease of rent on account of any infinitesimal increase in the rates which has taken place. The reason that the rent reduction is asked for is on account of the low prices of produce.

30,272. I understood you to advocate a division of the rates between the owner and the occupier?—Yes, I should like very much to see that; but that is more a matter of sentiment, and of working smoothly. I should say here that I did not intend that the tenant should benefit financially by the change to the landlord paying half the rates; it was merely a different way of putting it. The tenant does not benefit now by the alteration in the collection of the tithe.

30,273. Is it not the usual theory of the rent of agricultural land, that the rates ultimately fall on the landlord, and is not the general argument for the division of the rates that that process takes too long in accomplishment for justice to be done between the parties?—The effect on people's minds of paying directly is very different from the effect of leaving the payment over for a certain number of years, and then having to pay it indirectly.

30,274. Still, if a new rate, for instance a School Board rate, is sprung upon you since you considered the first terms of your tenancy, you would think it only fair, would you not, that that rate should be considered in a revision of the rent, if it is a new rate?—Yes, only the other matters are so big that one forgets all about the increase of rates. I have not given sufficient attention to the rate question, not thinking it sufficiently important.

Reduction of rents.

30,275. You said something in cross-examination as to the reduction of rents in proportion to prices not being sufficient, because the outgoings were not reduced in anything like the same proportion?—That is so.

30,276. Is it your opinion that rents have not been sufficiently reduced, having that argument in view?—I did not by any means intend to say that the landlords had not reduced their rents in a reasonable manner. I meant to say that a reduction of rent by 25 per cent., say, did not compensate the tenant, although the prices had only gone down 25 per cent.

30,277. If it did not compensate the tenant, would he not be paying a portion of his rent out of capital, and not out of the earnings of the land?—He would if he did not make ends meet.

30,278. Is it your opinion that part of the agricultural depression is due to tenants having been paying their rent out of capital, and therefore losing funds?—That is the reason of a certain amount of deterioration in farming operations.

Prices and production.

30,279. Mr. Little asked you some questions about meeting low prices by cutting down expenditure; I suppose you would qualify your answer on that point, would you not; I understand that you advocate keeping up the high cultivation of the farms; you would cut off the extravagances, but you would not cut down the essentials of keeping the land in good heart, would you?—No; I cannot believe that in the end it can be good policy to reduce the condition of the soil, even although it does not pay for a year or two at present; I should believe in good cultivation and liberal cultivation.

Mr. H. H. Scott.

6 July 1894.

30,280. And in keeping the best stock, the best seeds, and generally in being up to the mark, so long as you were not extravagant?—That is so, and I believe in doing everything well.

Freedom of cultivation.

30,281. Have you expressed any opinion as to freedom of cultivation, and freedom to sell hay and straw, so long as you return sufficient manure?—I think that it would be better if there were more freedom of cultivation, but I do not think it could be unlimited. There would have to be some provisions whereby an ill-disposed tenant, or a poor tenant, might be prevented from injuring the land, that is, as you say, he must replace hay and straw by buying in manure, or something of the kind—by returning manure in place of the produce sold off.

30,282. If sufficient security is attained by forcing the tenants to replace manure enough to keep the land in good condition, do you think it would be fair under the present conditions of agriculture that tenants should then be free to sell their produce?—Yes, as long as provision is made that the land is not deteriorated, I think it would be quite fair and quite right to give them freedom of sale.

The Agricultural Holdings Act. Rent upon improvements.

30,283. Now, as I understand your evidence, your very interesting evidence, if I may say so, about the principle of compensation under the Agricultural Holdings Act, it comes to this, that the best tenants really get the least compensation?—They might.

30,284. Is it not also true with regard to the best tenants, the tenants who spend most on their land, that in keeping up the value of their land they have also kept up the amount of their own rents?—Yes, and there is also the disadvantage that their land is much more lettable, that is they could be made to pay increase rents upon their own improvements at the present moment.

30,285. That is, it is land which attracts a great deal of competition?—Yes, it attracts competition from being in good order.

30,286. Does that not, in your opinion, lead to an improving tenant being in practice rented on the value of his improvements?—No; I do not think it is acted upon as a rule I am glad to say, but it might be, and it is a grief to a tenant, and makes it unpleasant for him, to think that it might be rented; but, in practice the landlords of England have behaved very well in that respect, better, I think, perhaps than my countrymen in Scotland, and they do not generally rent on improvements.

30,287. You think the good tenants have got a reduction of rent which allows for the value of their improvements?—No, I do not think that good tenants get reductions easier. It is rather more difficult for them to get reductions; it is worse for them to prove their cases.

30,288. In that case they are rented on their improvements, are they not?—I should rather say that they are not very often in practice, but sentimentally it makes many a tenant unhappy to think that he may be rented on his improvements; and, no doubt some of them are, I would not like to say that they are generally.

30,289. Is it not your experience that tenants who have really kept up their land are practically compelled to pay the rent which other farmers would be willing to give for that land?—No, they are not compelled in every case to pay the rent which other farmers would give for this land; because, if the landlord is a reasonable, good landlord, he would not force them to that. They are liable to be compelled but they are not in all cases compelled, nor in very many cases probably.

30,290. Supposing one farmer has neglected his farm, and brought down the value, he would very possibly get a reduction based upon the deteriorated condition of his farm, because other farmers would not give more than a certain value for it?—I have seen cases of that kind where a man farms so badly that he could get any reduction, because nobody would take his land, the land is so dreadfully depreciated.

Mr. H. H. Scott. 6 July 1894.

30,291. Similarly, a good farmer, farming on the same estate, who really kept up the value of his land, would not get his rent reduced to the amount which would allow him the value of his improvements, would he?—No, he would not; the tendency would rather be that his rent would be kept up.

30,292. (*Mr. Dalton.*) Mr. Channing asked you before whether that was not renting the man on his own improvements; what do you say?—That would be renting him on his own improvements, but I wanted to bring it out that generally the landlord did not wish to rent the man on his own improvements.

30,293. (*Mr. Channing.*) You wish to state a thing which I thoroughly agree with, namely, that the greater part of the English landlords have tried to meet their tenants as fairly as possible?—That is so.

30,294. On the other hand, these cases do occur, and your assertion that the best man fares worst is not only true with regard to compensation, but also, to a certain extent, with regard to rent?—Yes; I have proved that in my own case. On one of my farms on one occasion I happened to have a difference with my landlord, and I felt what a fool I was to go on and improve this place, which would now let quite readily, and that there would be a dozen tenants for it.

Railway rates.

30,295. Just one question about railway rates; you are a member of the Northumberland County Council, are you not?—Yes.

30,296. You passed some resolutions which reached me the other day. One of your points is, I think, that the trader could not prove his case under the Government Bill, or rather that he would not be able to get proof easily of what the rates of 1892 were, and thereby prove that he was paying an increase; I think that was one of the points, but perhaps if you have not it fresh in your mind, I need not trouble you with it?—It should be fresh in my mind, for I have been working at it pretty well. There is a difficulty in getting at the old rates; is that the point?

30,297. The point would rather arise in getting an increased rate reduced to a reasonable amount, and I am asking you whether the agriculturist who has paid overcharges in the course of last year would not find a very great difficulty in proving his case, because he would not have access to the necessary documents?—That is quite so; it would be very difficult. Most of us farmers have paid these rates, and I do not think we shall ever get back the money. It would be very difficult to prove at any rate, as they have removed the old books from the stations.

30,298. You have not access to the old books now of 1892?—No, they have taken them away; we had them.

30,299. If you have not access to the old books of 1892, you would not be able to prove your case?—That is so. I have thought over that a good deal. We will get none of it back, whatever the rate is that is fixed ultimately.

30,300. Do you think any such Bill would be of any use unless it enabled the farmers who had actually paid overcharges in the last year to recover part of those overcharges?—It would be very good if the overcharges were recovered, but I think it would be still more important that we should have a Bill to deal with the companies in the future.

30,301. (*Captain Owen Thomas.*) How long have you been engaged in farming?—Since I could walk probably, more or less; I have been engaged in farming all my life. I am engaged in something else now as well.

30,302. How much per acre are you paying now for your farms in Northumberland?—These hill farms are, I should think, about 2,300*l.* altogether.

30,303. Have they been reduced?—Yes, most of them have, all except one, I think.

30,304. When did you first feel the effects of this depression?—After 1874 or 1875.

30,305. Since that, I suppose, prices have gradually fallen?—No. In 1882 and in 1883 there were very high prices for stock.

Low prices.

30,306. Have you, during your long experience, ever seen prices so low as at present?—Never.

30,307. I think you said prices had fallen 35 per cent.?—I think so on stock.

Mr. H. H. Scott 6 July 1894.

30,308. As compared with 30 years before?—The last three years I hold to be 35 per cent. lower than the preceding 30 years' average.

30,309. And as compared with 1883?—The present prices are not more than half the prices of 1883. In 1883 there was a boom.

30,310. I think you said that the rents had not been reduced in proportion to the reduction of prices?—No, they have not in this way; that rent does not represent the whole outgoings of the farm, and the other things have not been reduced, except artificial foods and manures. The rent with me only represents one-fourth.

Tenants' capital.

30,311. What is the capital necessary to enable a man to stock a farm in your neighbourhood?—That is a very difficult question to answer. On arable land, and good field land, probably it would be from 7*l.* to 10*l.* an acre; but then with the hill lands it is impossible to calculate how much per acre, because they are so diverse. Sometimes they are only worth 1*s.* or 2*s.* an acre, and sometimes they are worth 5*s.* or 10*s.*

30,312. Do you keep accounts?—Yes, I keep books.

30,313. What would be a fair interest for a farmer to get on his capital, or what did he get, rather, previous to the depression?—They were very good times for sheep farmers before 1875, as a rule, and farmers made some money then. I should think sheep farmers were getting from 8 to 10 per cent., quite.

30,314. Are they making anything now?—No; I made less than nothing last year, and I think I will make very little this year, if anything. I think, generally, they are certainly not making anything.

30,315. Do you see any prospect of prices going up?—I am like most people; hope is never dead in my breast, and I do hope for prices going up.

Prospects of farming.

30,316. Have you anything you can point to to justify your hopes?—Yes, to a certain extent. The Americans make it pretty clear that after so many years they will require all they can produce. When I was out in America a few years ago, and travelled over America to see the country, I was thoroughly astonished. If agriculture is bad in this country, it was worse in America. It was less profitable in America, and it was the most wretched business that ever I saw. I do not think myself that it will go on, and even if other countries send to us, they will not.

30,317. You have suggested certain remedies in your brief. Do you think that if they were all carried out there would be any chance of things improving?—Yes, I think they might do good at any rate.

Co-operative sheep farming.

30,318. (*Mr. Everett.*) In regard to the shepherds, have they sheep of their own running with the master's, or do they take a percentage of the profit of the whole flock?—They have sheep of their own, and they are ear-marked for themselves, and they sell the produce themselves if they like; or if they like to ask the master he generally allows their sheep to be sold with his. Their sheep are entirely distinct, and they have capital of their own invested in the sheep.

Women's labour.

30,319. The women's wages, I think you said, were 18*d.* per day?—With a higher wage in harvest, when they have 20 days at 3*s.* per day.

30,320. What hours do they work for the 18*d.*?—I think they work about nine hours.

30,321. (*Mr. Little.*) They work for the same hours as the hinds, do they not?—Generally the same, but on some farms they work a little less. I think the hinds just work about nine hours now.

Co-operative sheep farming.

30,322. (*Mr. Elton.*) About the shepherds, you said it was a system that had gone on for some time?—Yes, very long I think.

30,323. Practically it has been going on ever since there has been a county of Northumberland. I suppose?—I suppose since sheep farming began in Northumberland; I should say it probably had.

30,324. I think I have noticed it in other parts of the country, where a shepherd looks after what they call the town flock. In Northumberland, I suppose, the parish would be held by one farmer only, is that so, or would it be worked for more than one farm?—I do not understand the term town flock.

30,325. It is a local term?—Is it a south country term?

Mr. H. H. Scott. 6 July 1894.

30,326. It is a midland county term. It is the same as the parish flock. It means that shepherds look after all the sheep of the combined farms of the parish?—Is that on common lands?

30,327. No, but it is a system which is very like yours, because the shepherds run their own sheep with the flock. It is a very ancient system; it is not a modern form of co-operation?—No.

Labour.

30,328. When you talk about the price of labour, may I ask whether you recollect what the labour was worth before 1888. I think you have mentioned that it has risen since 1888?—It has risen since 1888. At that time the labourer would be getting 3*s.* a week less, I should think, quite.

30,329. A rise of 3*s.* a week is a very large item of expenditure?—Yes, I think they would be getting three to four shillings less.

Condition of labourers.

30,330. Are there a good many labourers still in employ?—Yes, there is a considerable number of labourers.

30,331. Would a rise of 3*s.* per week per labourer compare largely with the amount of rent. Take a farm with a rent of so many hundreds a year; would you say that on that farm the 3*s.* extra per week for the labourers would be a small item or a very large one?—It is a very considerable rise in the labour bill. I am sorry that I did not look out the figures, but my impression is that the labour bill equals the rate.

30,332. I would put it very shortly: Would not a rise in the price paid for labour, speaking very generally, say a rise of 25 per cent., have very much the same effect as cutting 25 per cent. off the rent; that is, could it be paid for by cutting 25 per cent. off the rent?—I do not think labour has risen 25 per cent., but it has risen probably 10 per cent. since 1888.

30,333. Ten per cent. will do just as well?—I do not look upon it in the same light as a cutting off of rent, or a raising of rent, because when labour rises we expect to get a certain benefit from it, because labour does not rise to the farmer unless it rises over the country generally, and we always find that high wages make the recipients consume more agricultural produce. So that high wages are rather a source of profit to us than otherwise.

30,334. There is a source of profit about that rise?—Yes, but there is not in the other case.

30,335. When you estimate 23 or 24 shillings per week as the amount of the labourer's wage, you took the cottage at about 3*s.* or 3*s.* 6*d.* I think, did you not?—Yes, I think so.

Cottages and gardens.

30,336. Do the cottages with a garden let at that rate. I only want to know on what your statement is based, whether it is based on actual payments made for other cottages or not, because it is a large price?—We charge 4*s.* and 4*s.* 6*d.* for colliery cottages, and I was comparing the hind's wages with the miner's wages.

30,337. Miners' cottages, of course, are very good as compared with ordinary agricultural labourers' cottages?—Our cottages in Northumberland now are about as good as the miners' cottages; they are very good cottages.

30,338. Very well, I will take that answer, that the reason why you put the cottages at 3*s.* to 3*s.* 6*d.* is because they are very good?—Yes, they have a very good garden, and a good-sized garden.

30,339. In the parts of the country I am familiar with we should charge what you are speaking of at under 18*d.* a week, garden included. We should charge 1*s.* for the house and 3*d.* for the garden?—We do not know anything about letting cottages. When I mentioned 3*s.* to 3*s.* 6*d.* I was calculating the hind's wages against the miner's wages.

30,340. You say altogether it is worth to him 23*s.* or 24*s.* a week?—I was putting it that if the miner paid 3*s.*, or his house cost him 3*s.* a week, the hind's cottage should be based on something like the same footing.

Mr. H. H. Scott. 6 July 1894.

30,341. If the hind had to hire a cottage would he have to pay that amount?—I think so.

30,342. (*Mr. Little.*) What accommodation do these cottages contain?—My own principally have two rooms below and two bedrooms above, but some of them have three.

30,343. On the estates of the Duke of Northumberland?—Yes, and on Sir John Haggerston's estates. I think they are much the same.

30,344. But that is not the general run, is it?—That is rather better than the general run. They are very much improved. Some of them only had one room when I knew them first, and there are very few now of two rooms.

30,345. (*Mr. Elton.*) You would not value those at 3*s.* a week?—No.

30,346. The potato ground you put at 1*s.* 6*d.* a week throughout the year, I think?—Yes.

30,347. How much ground is it? 1,000 square yards?—No, 1,000 lineal yards of drill; sometimes it is 1,200 lineal yards.

30,348. What sort of space does that represent?—It would be just about the fifth of an acre. It is planted by the farmer, with the farmer's seed and work.

30,349. Do you think an acre prepared by a farmer is worth 20*l.* a year?—Yes.

30,350. It is a very high price, is it not?—No, not for potatoes. It may be in such a year as this has been, but taking the run of years it is not.

30,351. By taking the run, you mean taking the common years?—Yes; it is not a very high price.

30,352. Do you think that is a proper price at which to estimate the potato ground for the cottages?—Yes, I think so. There are some other perquisites. I do not know that I gave them all. For instance, coals are led for the hinds from the pits to the railway stations.

30,353. The reason I am asking you this question is that it appears to me to alter the relative situation between the Northumberland hind and the southern labourer very much, because the things that we in the south say are worth 10*l.* a year for so much potato ground, and 1*s.* 6*d.* to 1*s.* 9*d.* for cottage and garden are counted at double the value up in Northumberland; and, therefore, the wages appear very much higher, though they are not so much higher. You consider that that is a right way of estimating the value of the potato ground, by putting it at 20*l.* an acre when it is prepared by the farmer, sown with his seed, and everything?—Yes, that is the ordinary calculation that we make.

Labour.

30,354. (*Lord Rendel.*) I think, in attempting to assess the value of the wages in money, you did so for the purpose of comparing the cost of the hind with the cost of the miner?—Yes, that is just what I was trying to state.

30,355. And you wish to point out that the miners' wage more or less determined the wage of the agricultural labourer?—That was so. Then I went on to contrast their cottages, but perhaps the figure I stated would be too much rent to pay in another district where there was not the element of competition by miners. That was what I was wishing to correct in the learned Commissioner's mind, as I should be sorry if there was any mistake in that way; when I was mentioning the price of cottages I was contrasting the hind's wage with the miner's wage.

The witness withdrew.

Adjourned to Thursday next at 12 o'clock.

Fifty-second Day.

Thursday, 12th July 1894.

PRESENT:

THE RIGHT HON. GEORGE JOHN SHAW-LEFEVRE, M.P., IN THE CHAIR.

The Right Hon. Viscount COBHAM.
The Right Hon. BARON RENDEL.
The Right Hon. HENRY CHAPLIN, M.P.
Sir ROBERT NIGEL FITZHARDINGE KINGSCOTE, K.C.B.
ROBERT GIFFIN, Esq., C.B.
Captain OWEN THOMAS.
FRANCIS ALLSTON CHANNING, Esq., M.P.
JOHN CLAY, Esq.
CORNELIUS NEALE DALTON, Esq., C.B.
ROBERT LACEY EVERETT, Esq., M.P.
JOHN GILMOUR, Esq.
GEORGE LAMBERT, Esq., M.P.
WILLIAM CUTLACK LITTLE, Esq.
WALTER HUME LONG, Esq., M.P.
CHARLES WHITEHEAD, Esq., F.L.S.

HERBERT LYON, Esq., *Secretary.*
R. F. CRAWFORD, Esq., *Assistant Secretary.*

Mr. G. Muirhead.

12 July 1894.

Mr. GEORGE MUIRHEAD called and examined.

Mr. G. Muirhead.

12 July 1894.

Area of estates.

30,356. (*Chairman.*) I believe you are the agent of Lord Aberdeen for his estate in Aberdeenshire?—Yes.

30,357. What is the size of that estate?—The total extent of the estates for which I am agent belonging to Lord Aberdeen is 53,000 acres, of which 43,705 are arable, 2,007 are pasture, 3,105 waste, roads, and streams, 3,717 plantations, and 466 mosses—in all 53,000 acres. About 1,000 acres of arable land are in the occupation of the proprietor.

Rental.

30,358. The rental of that property, so far as it is let, amounts to about 40,000*l.* a year?—Yes.

30,359. I see that it has not varied very considerably; in 1872 it was 35,000*l.*, in 1873, 36,000*l.*, and in 1874 38,000*l.*; then it rose gradually to 41,800*l.* in 1884, and since then there has been a very slight reduction of about 1,000*l.* a year, and it now amounts to about 40,700*l.*?—Yes.

30,360. Apparently the rental actually received has approximated very closely to the agreed rental?—Yes, it has so. Of course there have been arrears, but these arrears are not taken into account in the figures you have read.

30,361. There is a column in this table which I have before me of rent actually received?—That means the actual rent that the tenant should pay, exclusive of arrears, of which there are always some.

30,362. (*Mr. Channing.*) Does it include the temporary remissions?—The remissions are shown separately in the table. In 1892 about 2,000*l.* were given to the tenants who, on account of bad weather during harvest, could not get their crops secured in good order that year. In 1880 Lord Aberdeen gave a remission of rent amounting to 19,791*l.* on account of the agricultural depression existing at that time.

30,363. (*Chairman.*) For how long a period?—In 1880.

30,364. For that one year was it?—Yes. He gave about half the rental. The rental of that year was 40,882*l.*, and he gave abatements amounting to 19,791*l.*

30,365. That was after the very bad season of 1879?—Yes. Agricultural depression at that time was apparently felt severely in Aberdeenshire. There was a proposal about that period to bring a new branch line, from Udny Station on the Great North of Scotland Railway to the village of Methlick, on the Haddo House estates, and Lord Aberdeen intended, I understand, to give a very large subscription to the proposed new line of railway with a view of getting better facilities for his tenants with regard to carriages, but the scheme fell through. He was, however, so good as to substitute for the subscription an abatement of rent, and so half a year's rent was given back to the tenants in 1880. Then in 1886 Lord Aberdeen gave an abatement of 5,068*l.* on a rental of 42,030*l.*, and in 1892 he gave another abatement of 2,039*l.* on a rental of 40,728*l.* That was on account of the bad harvest of 1892; in many cases the crop could not be got in at all, and when it was got in it was worth very little money on account of the continuous rains, which fell from the month of August on to the month of November.

30,366. Then in 1893 what was done?—In 1893 there was no abatement.

Re-valuation of farms and reduction of rents.

30,367. Then with those three exceptions, 1880, 1886, and 1892, the rents have been fairly collected?—Yes, I may mention that in 1886, or about that time, Lord Aberdeen arranged to allow what is called a re-valuation of the farms to every tenant who would apply for it. A considerable number of farmers took advantage of this re-valuation, which was done by arbitration, and there was a fall on the farms whose occupants had applied for re-valuation, of about 23 per cent. on a rental of about 11,000*l.*

30,368. (*Mr. Channing.*) Can we have the number of tenants who applied for the re-valuation?—Yes. 158 tenants, involving a rental of 15,575*l.*, applied, but as 12 of these had got a re-valuation of their holdings in 1882, and a number of others had only recently entered into new leases, or had withdrawn their applications, the above number was reduced to 125, involving a rental of 11,045*l.*

30,369. (*Mr. Everett.*) What reduction did the re-valuation result in?—It resulted in a reduction of about 23 per cent. on a rental of about 11,000*l.*

30,370. (*Mr. Channing.*) That would be on about one-third of the estate?—It might be about one-fourth of the rental of the estate, and include about one-sixth of the tenantry.

30,371. (*Chairman.*) Was that re-valuation allowed to the tenants who had leases?—They all have leases; Lord Aberdeen was so liberal as to allow it to all the tenantry, with the exceptions which I have mentioned.

30,372. Were they 19 years' leases?—Yes. All that the tenants had to do was to intimate that they wanted a re-valuation, and the arrangements were made by an arbitrator appointed by the tenants, and an arbitrator appointed by Lord Aberdeen, with an oversman. Lord Aberdeen arranged that the reduced rents should continue for five years; then when the five years came to an end matters were looking rather better in Aberdeenshire, and the reduced rents were re-arranged, with the result that they were raised 12 per cent., and that brought them within 11 per cent. of the old rents.

30,373. You mean those particular farms that were re-valued?—Yes. The other farms were allowed to remain at the rents stipulated in the leases.

30,374. That reduction was given for five years I think you said?—Yes. The last year in which it was given was 1890. Those farmers who got a re-valuation in 1886 continued to get the reduction for five years until 1890, when Lord Aberdeen re-considered the

Mr. G. Muirhead. 12 July 1894.

question, and their rents were then raised 12 per cent., making them, as I have said, still 11 per cent. below the original rents; those rents they have continued to pay since 1890.

30,375. Then practically the result is that, looking over the whole, the rents have been reduced by 12 per cent. on about one-third of the rental?—Yes, on about one-fourth of the rental.

30,376. And the tenants of two-thirds have not applied for abatements?—They did not apply for a revaluation; they were satisfied with their bargains.

Small holders.

30,377. It appears from the figures before us that a very large proportion of the tenants are small tenants?—A very large proportion.

30,378. Of 800 tenants only 130 have holdings of over 100 acres?—Yes.

30,379. And 111 of those have holdings between 100 and 300 acres, and 17 have holdings from 300 to 500 acres?—I find from my notes here that there are 62 tenants whose holdings extend from one to five acres each.

30,380. Those, I suppose, are really labourers?—Yes, generally speaking. They cultivate their crofts, and they take work besides; they do work for the larger farmers and harvest work where they can get it.

30,381. Then I see there are 180 tenants holding from 5 to 10 acres?—Yes.

30,382. What are those men?—They are much in the same way of doing as the tenants who occupy the smaller holdings. They take such farm and other work as they can get in the neighbourhood.

30,383. Then there are 143 tenants holding from 10 to 20 acres, what are those, do they live wholly by the land or what?—These tenants include tradesmen, such as masons, carpenters, and blacksmiths, and some of them take additional farm work if they can get it; probably they keep a horse and get some work in the neighbourhood.

30,384. What is the case when you come to those tenants who hold between 20 and 50 acres?—These tenants generally speaking are wholly occupied with work on their own holdings.

30,385. Do they live wholly upon the land?—Speaking generally they do. Of course they may have some carting or ploughing to do for their neighbours; but when a farm comes to about 30 or 50 acres, it takes the tenant all his time to cultivate and attend to it.

30,386. Are these smaller tenants at all the class you would call crofters or no?—They have all leases, but I suppose they would be called crofters, although they really are not; they are just small tenants. A number of those tenants hold from year to year under a yearly lease.

Particulars of houses and buildings.

30,387. (*Mr. Little.*) Have they generally houses on their holdings?—Yes, they have a house with a small arrangement of offices to suit requirements. I have brought with me some details of their houses and offices, which I can lay before the Commission (if the Chairman wishes me to do so), setting forth what is given in the way of buildings on the various sizes of farms on Lord Aberdeen's estates, from 1 to 5 acres, from 5 to 10 acres, from 10 to 20 acres, from 20 to 50 acres, for 100 acres, for 300 acres, and for 500 acres. These details bring out very important information; for instance, for farms which extend from 1 to 5 acres it takes 42 years' rental to provide the necessary buildings.

30,388. (*Chairman.*) Have the houses been erected by the landlord?—I am speaking of the cases of houses erected by the landlord, and I have with me the actual plans that have been in use. In the case of farms from 1 to 5 acres, the plans for the farmhouse give accommodation for a kitchen, two bed-rooms, a scullery, and a milk-house; the cost is about 133*l.*, and the cubical air space is 5,453 cubic feet, which costs about $5\frac{1}{12}d.$ per cubic foot. The farm offices include a barn for straw and turnips, a byre for one cow, one stirk, and one calf; the cost is about 47*l.*, the cubical air space 3,354 cubic feet, at a cost of about $3\frac{4}{12}d.$ per cubic foot. The total cost of the farmhouse and offices is 180*l.*, which is equal to about 42 years' rental of land at 17*s.* per acre.

30,389. Has the landowner erected all these buildings himself or have the tenants erected them?—The old houses and offices originally were built by the tenantry with the help of the landlord, but now in the case of new offices the proprietor erects them himself, and either the tenant pays interest or there is an arrangement in connection with the rent, as the case may be. Then with regard to a 10-acre holding, I see that the farmhouse is on the same plan as the farmhouse for a five-acre holding, that it costs about 133*l.*, and that it has the same cubical air space. The farm offices of course are a little larger and the accommodation includes a barn for straw and turnips, and a byre for two cows, two stirks, and two calves. The cost is about 60*l.*, the cubical air space being 4,415 cubic feet, or about $3\frac{8}{12}d.$ per cubic foot. The total cost of farmhouse and offices is 193*l.*, which is equal to about $22\frac{7}{12}$ years' rent at 17*s.* per acre. That is on a 10-acre holding. In the case of a 20-acre holding, the farmhouse accommodation includes kitchen, two bed-rooms and milk-house on ground-floor, and two bed-rooms upstairs; the cost is about 150*l.*, the cubical air space is 6,350 cubic feet, which comes to about $5\frac{8}{12}d.$ per cubic foot. Then the farm offices for a 20-acre holding include barn, byre, for nine cattle, turnip-shed, stable for two horses, and a cart shed; the cost is about 150*l.*, the cubical air space being 15,340 cubic feet, or about $2\frac{11}{12}d.$ per cubic foot. A holding of this size has generally two horses, the tenant working the smaller crofts. The total cost of farmhouse and offices is 300*l.*, which is equal to $17\frac{7}{12}$ years' rent at 17*s.* per acre. In the case of a 50-acre holding the farmhouse accommodation includes kitchen, parlour, bed-room, milk-house, and scullery on ground flour, and two bed-rooms and closet upstairs. The cost is about 210*l*; the cubical air space 8,840 cubic feet, which comes to about $5\frac{8}{12}d.$ per cubic foot. The farm offices for a 50-acre holding include barn, byre for 20 cattle, turnip-shed, stable for three horses, farm servants' sleeping apartment, and a cart-shed. The cost is about 304*l*, the cubical air space being 36,514 cubic feet, or about 2*d.* per cubic foot. The total cost of farmhouse and offices is 514*l.*, which is equal to about 12 years' rent at 17*s.* per acre. In the case of a 100-acre holding the farmhouse accommodation includes kitchen, parlour, living room, bed-room, scullery, and milk-house on ground floor, and two bed-rooms and closet upstairs. The cost is about 225*l.*, the cubical air space being 9,941 cubic feet, which comes to about $5\frac{5}{12}d.$ per cubic foot. The farm offices for a 100-acre holding include barn, byre for 36 cattle, turnip shed, stable for four horses, farm servants' sleeping apartment, and a cart-shed. The cost is about 480*l.*, the cubical air space being 62,782 cubic feet, or about $1\frac{10}{12}d.$ per cubic foot. The total cost of farmhouse and offices is 705*l.*, which is equal to about $8\frac{3}{12}$ years' rent at 17*s.* per acre. For a 300-acre holding the farmhouse accommodation includes three rooms, kitchen, scullery, servants' bed-room, pantry, milk-house, &c., on ground floor, and six bed-rooms and two attic-rooms upstairs. The cost is about 560*l.*; the cubical air space 24,150 cubic feet, which comes to about $5\frac{7}{12}d.$ per cubic foot. The farm offices (which also would be suitable for a holding of 250, 275, or 300 acres) include barn, byres for 100 cattle, stable for eight horses, colts and pony stable for six horses, farm servants' sleeping apartment, cart-shed, and turnip-sheds. The cost is about 1,014*l.*, the cubical air space being 131,812 cubic feet, or about $1\frac{10}{12}d.$ per cubic foot. The total cost of farmhouse and offices is 1,574*l.* which is equal to about 6 years' rent at 17*s.* per acre. In the case of a 500-acre holding the farmhouse accommodation includes dining-room, drawing-room, parlour, nursery, kitchen, servants' bed-room, pantry, &c., milk-house, all on the ground floor; five bed-rooms upstairs, bath-room, and two closets. The cost is about 800*l.*, the cubical air space being 34,550 cubic feet, which comes to about $5\frac{7}{12}d.$ per cubic foot. The farm offices for a 500-acre holding include byre for 129 cattle, three loose boxes, cattle-shed, stable for 12 work-horses, colts'-stable for eight horses, riding stable for three horses, turnip-sheds, cart-shed, gig house, tool-house, hay-house, implement-shed, poultry and pig houses, farm servants' sleeping apartments, engine-house, &c. The cost is about 1,700*l.*, the cubical air space 279,800 cubic feet or about $1\frac{6}{12}d.$ per cubit foot. The total cost of farm-house and offices is 2,500*l.*, which is equal to $5\frac{1}{2}$ years' rent of land at 17*s.* per acre.

Mr. G. Muirhead. 12 July 1894.

Net rental.

30,390. I perceive from the statement you have laid before us after accounting for all outgoings, including repairs and improvements, expenses of management, local rates, and so forth, the net income of Lord Aberdeen has been very fairly maintained for the last 20 years?—Yes.

Mr. G. Muirhead.

12 July 1894.

30,391. And that it has averaged about 28,000*l.* a year —it does not appear to have fallen off from that?—Not appreciably, speaking generally.

Applications for farms.

30,392. When the farms are vacant are there plenty of applicants for them?—At the present time I have a hundred applications lying in my office for holdings on Lord Aberdeen's estates which I cannot supply.

30,393. For holdings of all sizes?—Of all sizes; at least a hundred applications.

30,394. (*Mr. Channing.*) Which you are not in a position to meet?—Which I am not in a position to meet. I have a printed form which, in the case of an application being made to me, is put in use in this way; the form sets forth the size of the farm and the position of it, and also states what rent the applicant will offer for it; the form also states the requirements of the applicant in the case of his offer being favourably considered.

30,395. Are these men who have made applications to you men of sufficient capital?—I am proceeding to explain to you what occurs. When a man sends to me an application for a farm, I forward to him one of these offer forms, which contains a column for bankers' references, and also a column for references as to the applicant's character as an agriculturist. I collate the offer forms when they are returned to me, and communicate with the bankers and also with the gentlemen to whom the applicants have referred with regard to their character, and I keep the completed forms all ready in my office for immediate use. In the case of a lease coming to an end on Lord Aberdeen's estate he always arranges for the sitting tenant getting the farm if this can be done at all, and I may mention that I have, within the last five years, let no fewer than 400 farms, principally to sitting tenants.

30,396. That is to say, on the termination of leases?—Yes.

30,397. Do you give a preference to the sitting tenant?—Yes. Very few tenants leave.

30,398. When a vacancy occurs through the death of the tenant or his unwillingness to continue the lease, what happens then?—I then take the offer forms, which I have by me, and choose from them, say, half-a-dozen men with the requisite capital, and I send notice to these men that the farm has been given up by the tenant, and ask them to offer for it. These half-dozen men are suitable in every way with regard to character and also financially to take the farm. After the offers come in I look carefully over the requirements of the offerers, and lay the offers before Lord Aberdeen, who then selects the applicant which he prefers as a tenant for the farm.

30,399. Does it generally result at present in your getting a larger rent than you got from the outgoing man?—Within this last year rents have been advancing. I should say that, generally speaking, with a smaller holding I can perhaps get an advance of from 10 to 15, or even almost 20 per cent. I do not like to induce the tenants to give more than a reasonable rent for the land.

30,400. You do not require a competition rent exactly?—What Lord Aberdeen wishes is to let the land at its fair letting value in such a way that the tenant can live comfortably upon it. Without any pressure on the part of the proprietor I find that advances of from 10 to 15 per cent. are now being made.

30,401. Without pressing?—Without pressing. Supposing there was a farm of 20 acres to be let, I would send to, say, half-a-dozen or a dozen applicants for holdings notice that such a farm had been given up, and the offers that would come in to me would be probably from 10 to 15 per cent. higher than the old rent, that is the best of them; the most suitable man with regard to capital and character would probably offer about 10 or 15 per cent. more than the old rent.

30,402. Do you find plenty of men with sufficient capital making applications?—Yes.

30,403. Is there no difficulty?—I have applications in my office from men with capital from 50*l.* to 3,000*l.*

30,404. In the case of the larger farms do you still find plenty of applicants?—No, I do not think that I could with the same facility let the larger farms. There is not the same demand for larger farms. I have not recently had experience with a large farm in the market, that is to say, in inviting offers for it, but I have been re-letting a number of the larger farms at a small reduction on about the old rent.

Mr. G. Muirhead.

12 July 1894.

20,405. But those are to the existing tenants I suppose?—Yes.

30,406. Where there is a larger farm vacant do you find that you can get men with capital to take it?—I have applications from men who have from 50*l.* to 3,000*l.*, but I find of late years that in the case of a large farm becoming vacant a number of the tenantry have no hesitation in agreeing to take it at the estates' land valuator's valuation. About six months ago the tenant of a 300-acre farm could not carry it on; he got into difficulties, and had to give up farming. Lord Aberdeen instructed me to give this tenant a smaller holding, which he has now got. I have almost never known a case where a tenant has been turned off the estate when he has got into difficulties. A smaller holding suitable for the means which the tenant still has is generally offered to him if such can be got. The tenant of the 300-acre farm mentioned was succeeded by another of Lord Aberdeen's tenantry, who expressed his willingness to take the farm at the estates' valuator's valuation. The tenantry are apparently willing to take larger farms in that way.

System of cultivation.

30,407. What is the general nature of the cultivation there?—The general nature is arable and the crops are chiefly oats, grass, and turnips; barley is also grown, but no wheat.

Demand for farms.

30,408. I see that at a meeting which was held in Dalkeith within the last few days with a view to communication with Mr. Hope, the Sub-Commissioner appointed by this Commission, the various speakers are represented to have been unanimous in holding that the competition for good arable farms in Scotland was never keener than it is just now; do you say the same thing for your district?—I can say the same thing with regard to the smaller holdings. I have had no recent experience with regard to the larger holdings on the Haddo House Estates. These speakers evidently referred to farms advertised in the newspapers for public competition. I hear on all sides that the demand in the south of Scotland for large farms is very great. I was for twenty years an agent in the south of Scotland—in Berwickshire—and gave evidence before the last Commission with regard to that part of the country. then experienced the difficulty of falling rents.

30,409. Does your own experience in Aberdeenshire tally with those I have quoted?—Yes, so far as the smaller farms are concerned.

30,410. Up to what average-sized farms would you say?—Up to about 100 acres.

30,411. Beyond that you have not had much experience in re-letting?—Not in re-letting to new tenants.

30,412. The tenants have gone on?—Yes. In the case of the 300-acre farm which I have mentioned the tenant has taken it on the estates' valuator's valuation, and the farm has been valued lately, and the fall has been about 9 per cent.

Condition of labourers.

30,413. As regards the labourers of your district; what is their condition?—The farm labourers to a large extent on the Haddo House Estates are unmarried young men, and on the larger farms they live in what is called, in Aberdeenshire, a bothy. They have their food chiefly in the bothy, but a part of it in the farmer's kitchen. On the smaller holdings, however, the young men get all their food in the farmer's kitchen, and sleep in a chamber at the farm offices at night. A demand of late years has been rising for increased accommodation in the shape of labourers' cottages and the Earl of Aberdeen intimated to his tenantry about two years ago that he would be prepared to erect whatever labourers' cottages were required by the farmers on his estates at a rent of 3*l.* for each labourer's cottage. I have taken the liberty of bringing here, to lay before the Commissioners, a plan which Lord Aberdeen recently adopted for cottages, and which is found to be very suitable.

30,414. I think you said that the labourers generally living in these bothies are young men?—Yes.

30,415 Are they the sons of these smaller tenants—Yes, principally.

30,416. What are their wages?—They get partly money and partly meal and milk, with lodgings, the monetary value of all which is about 17*s.* or 18*s.* a week.

30,417. Has the rate of wages been maintained?—It has been maintained so far as I know.

Mr. G. Muirhead.
12 July 1894.

30,418. Of course the farmer feeds them?—Yes.

30,419. Seventeen shillings a week do you say?—Of course that would include everything—a farm servant who is fed and housed would, if you reckon all his advantages, be in the receipt of something like 17*s.* to 18*s.* a week.

30,420. But when a man gets paid in wages in full?—He gets 17*s.* or 18*s.* a week.

30,421. Comparing that with 15 or 20 years ago, I presume the labourer is a good deal better off?—I should imagine so.

30,422. On account of the fall of prices?—Besides, the appreciation of the value of money in which he is paid has to be looked to; the money is more valuable now.

30,423. He gets more for his money?—Yes.

30,424. And so he is better off?—I suppose so.

30,425. Should you say, looking at it as a whole, that the condition of the labourers has improved of late years?—Yes, financially I should say so. The demand for cottage accommodation is rising, but it is difficult to meet a great demand of that nature, the expenditure being very heavy.

30,426. Then it would seem that the tenants of the estate have had to pay the same wages that they did formerly and very much the same rent, with a very small reduction?—Yes.

30,427. And they have been able to do so in spite of the fall of prices?—Apparently so.

Demand for farms.

30,428. At all events their condition is such that other persons are ready to come in and take their place?—Yes, that is so.

30,429. And there is plenty of demand for farms in the district?—Yes, there is a great demand for holdings under 100 acres.

Prices in Aberdeenshire.

30,430. How do you account for their being able to do that in spite of the fall of prices?—I believe that probably what is called the depression in agriculture has not been so severely felt in Aberdeenshire, at all events on the Haddo House estates, as it has been felt in the south of Scotland. Our agricultural produce, I think, has not fallen in price so much as wheat, for instance. I may mention that the Haddo House tenantry are, generally speaking, very industrious, and endeavour to keep their rents well paid up.

30,431. Other prices have not fallen so much you say, but they have fallen, have they not?—Yes, they have fallen. I made an abstract of the fiars prices of Aberdeenshire for the seven years previous to 1886 and for the seven years previous to 1893. From that I find that the first quality of oats with fodder on the average of the seven years previous to 1886 was 28*s.* 9*d.*, and on the average of the seven years previous to 1893 was 26*s.* The first quality of oats without fodder—that is, without the straw—for the seven years previous to 1886 averaged 19*s.* 7*d.*, and for the seven years ending with 1893 the average was 17*s.* 4*d.* The second quality of oats with fodder for the seven years previous to 1886 was 26*s.* 3*d.*

30,432. Do you mean by oats with fodder, oats with straw?—Yes, with straw; they have that custom in Aberdeenshire in striking the fiars prices. The second quality of oats with fodder for the seven years ending with 1893, was 23*s.* 9*d.* The second quality of oats without fodder was 17*s.* 1*d.* for the seven years ending with 1886, and for the seven years ending with 1893 it was 15*s.* 1*d.* The first quality of barley with fodder for the seven years ending with 1886 was 34*s.* 1*d.*, and for the seven years ending with 1893 it was 31*s.* 4*d.*

30,433. In all these cases apparently there has been a reduction of about 10 per cent.?—Yes.

30,434. Of course the smaller tenants feed themselves and they grow their own food, and therefore have not felt in that respect the depreciation of prices?—It would appear so; they have not the outgoings in the shape of wages for labour which obtain in the cases of the larger farms where the farmer has to put his hand into his pocket and pay gold for his labour. Gold has appreciated in value very much.

30,435. (*Mr. Channing.*) May we have the rest of the figures on your table?—Yes; the second quality of barley with fodder for the seven years ending 1886 was 31*s.* 4*d.*, and for the seven years ending 1893 it was 28*s.* 9*d.*; the second quality of barley without fodder for the seven years ending 1886 was 23*s.* 1*d.*, and for the seven years ending 1893 it was 21*s.* 5*d.*; the first quality of bere with fodder (they grow bere in Aberdeenshire to a considerable extent) for the seven years ending 1886 was 32*s.* 2*d.*, and for the seven years ending 1893 it was 28*s.* 8*d.*; the first quality of bere without fodder for the seven years ending 1886 was 23*s.* 11*d.*, and for the seven years ending 1893 it was 21*s.* 5*d.*; the second quality of bere with fodder for the seven years ending 1886 was 29*s.* 6*d.*, and for the seven years ending 1893 it was 26*s.* 3*d.*; the second quality of bere without fodder for the seven years ending 1886 was 21*s.* 3*d.*, and for the seven years ending 1893 it was 19*s.*; beans for the seven years ending 1886 were 28*s.*, and for the seven years ending 1893, 25*s.* 7*d.*; pease—pease and beans are grown to a small extent only—for the seven years ending 1886 were 30*s.*, and for the seven years ending 1893, 31*s.* 10*d.* That is the only produce that has risen in price. Oatmeal for the seven years ending 1886 was 14*s.* 9*d.*, and for the seven years ending 1893 it was 14*s.* 1*d.*

Mr. G. Muirhead.
12 July 1894.

30,436. (*Chairman.*) In all these cases it seems that the reduction of price would be about 10 per cent.?—It would appear so.

Position of tenants.

30,437. As I pointed out just now the tenants have had to pay the same rate of wages, and they have paid the same rent within a trifling amount?—With the exception of the abatements that they received.

30,438. And they have been able, I presume, to make the two ends meet?—Apparently so.

30,439. At all events there are a good many people ready to come in and take their places?—Yes, I think that probably arises to a considerable extent from the well-known liberality and kindness of Lord Aberdeen to his tenantry.

30,440. We may presume that the land has been fairly rented, or rather under-rented than otherwise?—Yes.

30,441. The result is that there has been no real pressure upon the tenants?—That is so. I may mention that Lord Aberdeen is exceedingly kind to his tenantry.

30,442. It does not seem to me under those circumstances that you have very much to complain of in your district in regard to agriculture?—Everything at the present moment is going on very comfortably between the proprietor and the tenants.

30,443. Then you do not come here to complain of agricultural depression?—I have no experience of it so far as the rental is concerned. The tenantry may feel it and would probably be able to speak about it, but so far as my experience as an agent goes, with regard to the rental of the estates, I have no experience of it.

30,444. I presume the best test of whether a tenant is doing well is whether there are plenty of applications on the part of other persons to take his place?—That is so.

Tenants' associations.

30,445. (*Lord Rendel.*) Is there any association amongst the tenants as tenants?—They have several local agricultural associations with regard to cattle shows. I may mention that there are some very fine herds of cattle on Lord Aberdeen's estates. There are one or two well-known breeders there, including Mr. Duthie, Collynie, who breeds shorthorn cattle, and has, I believe, one of the best herds of shorthorns in the kingdom. There is also Mr. Mar, Uppermill, who breeds shorthorns largely, and there are likewise several breeders of Aberdeen Angus cattle.

30,446. In so far as the tenants associate for those objects, do they unite with them in objects with reference to the general condition of agriculture?—I have had no experience of any movement of that nature since I went to Haddo House. I went there five years ago.

30,447. There is certainly no combination in reference to the question of rent?—There has been no such combination since I became Lord Aberdeen's agent.

Rents.

30,448. I did not quite gather, from your detailed account of the rents, whether the smaller holdings were rented differently per acre from the larger ones?—I have an abstract here which may probably be interesting to you. In the case of holdings of from 1 to 5 acres, I find there are 62 of them, giving a total of 230 acres—the rental is 340*l.*, or 29*s.* 6*d.* per acre: in the case of holdings of from 5 to 10 acres, there are 180 upon the Haddo House estates, their acreage being 1,355, and the rental 1,252*l.*, or 18*s.* 5*d.* per acre; in the case of holdings of from 10 to 20 acres, there are

143 of them, with a total of 1,991 acres, the rental being 1,648*l.*, or 16*s.* 7*d.* per acre; in the case of holdings of from 20 to 50 acres, there are 168 of them, with a total of 5,264 acres, the rental being 4,151*l.*, or 15*s.* 11*d.* per acre; in the case of holdings of from 50 to 100 acres, there are 119 of them, with a total of 8,607 acres, the rental being 5,271*l.*, or 12*s.* 3*d.* per acre; in the case of holdings from 100 to 300 acres there are 111 of them, with a total of 19,010 acres, the rental being 17,257*l.* or 18*s.* 1*d.* per acre; in the case of holdings from 300 to 500 acres, there are 17 of them, with a total of 6,229 acres, the rental being 6,577*l.*, or 21*s.* 1*d.* per acre. There are two farms larger than 500 acres; their acreage is 1,018 acres, their rental 934*l.*, or 18*s.* 4*d.* per acre. Altogether, there are 802 holdings, extendig to 43,704 acres, the rental being 37,430*l.*, or 17*s.* 1*d.* per acre.

Particulars of houses and buildings.

30,449. I think you gave us, with some detail and great clearness, the cost of the houses and buildings required for these different holdings, and you brought out the fact that in the smaller holdings the capital involved in the buildings amounted to about 40 years' rent?—Yes.

30,450. Whereas in the largest holding that cost was reduced to something like five years' rent?—Yes. The cost is reduced to about five years' rent.

30,451. Apparently the variations in the ratio of rent per acre follow in many of the smaller holdings about the ratio of the capital value of the buildings compared with the land. Is that so?—Apparently so. I was somewhat surprised when I found that the five-acre holdings gave a rental of 29*s.* 6*d.* per acre. That can only be accounted for by the capital value of the buildings. You cannot, of course, let a five-acre holding without giving the tenant buildings; you must put up a house for him, which costs something like 130*l.*; then you must put up a byre, a barn, and so on, which would cost another 50*l.* probably, and bring it up to 180*l.* Wherever a tenant would go he would have to pay about 2*l.* or 3*l.* for a house, and you must credit the buildings with about 3*l.* of rent. So that if you take this 2*l.* or 3*l.* off the rent, then find what the rent of the land is, you would find that it would probably be about 17*s.* an acre, so that, practically speaking, that higher rental for the five-acre land is caused by what you say.

30,452. Are these smaller holdings under lease?—Yes, they are.

30,453. Even the small ones?—Yes, I may mention that I have instructions from Lord Aberdeen upon no account to reduce the number of small holdings upon the Haddo House estates, but rather to increase their number.

30,454. Does the cost of repairs upon buildings fall upon the lessees?—The cost of repairs upon the buildings falls partly upon the proprietor and partly upon the tenant in this way: in the case of buildings requiring repair the proprietor supplies the wood and the slates free, and the tenant repairs the building and puts on the slates. That is, generally speaking, what is done with regard to repairs. In the case of internal fittings the proprietor gives the wood free, and the tenant does the repairs. In the case of a new byre, for instance, sometimes the tenants would come to me and say that if the proprietor would give them wood and slates free they would put up the walls. It used to be the custom long ago on the Haddo House estates for the proprietor to supply the wood and slates free, and the tenant to erect the building.

30,455. Then the net profit on the smaller holdings is to the landlord subject to a larger deduction in regard to repairs than is the net profit on the larger ones?—It would naturally be so because the buildings of a larger farm are not so extensive in comparison with the acreage as those on a smaller farm.

30,456. And that is a set-off in reference to the rent?—I should imagine it would be.

Labourers' cottages.

30,457. In the larger holdings I think you told the Commission that an offer had been made to the tenants to erect cottages of a settled character at three per cent. upon their cost?—The offer that Lord Aberdeen made was that he should supply these houses for a rent of 3*l.* a year to the tenant; it would cost the proprietor much more than 3*l.* for such cottage in the shape of interest on the expenditure. I have taken the liberty of bringing here a plan of these cottages in order to lay it before the Commission. Lord Aberdeen requested me some time ago to go very carefully into the subject of cottage accommodation and to lay before him a series of plans, as well as, if possible, a model plan prepared to meet the requirements of the present day. This is the plan which Lord Aberdeen finally approved of (*producing plan of cottages*). The cost of each of these cottages is about 140*l.*

Mr. G. Muirhead. 12 July 1894.

30,458. So far as my question was concerned, my object was to ascertain whether if the desire of the labourers who are at present accommodated in bothies to obtain cottages was satisfied that would form, in your opinion, any considerable extra capital outlay in reference to the large farms:—Yes, it would, because the larger farms require more cottages; for instance, a 500-acre farm would take eight cottages or nine cottages.

30,459. If that want were satisfied, and satisfied by the landlord, larger farms would be saddled with the extra capital in building and with the extra expenditure in repairs which now applies in so much higher a degree to the smaller farms?—Yes.

30,460. That would be so?—Yes, but not to the same degree.

30,461. But it would?—It would to a certain extent be so.

30,462. To a substantial extent?—To a substantial extent it would.

30,463. On the other hand, the smaller farms have the advantage at present that the occupants get the benefit of reduced prices and have less need to spend money?—Yes.

30,464. And the larger tenants have the disadvantage of having to find more money in order to conduct farming operations?—Yes.

Existence of depression.

30,465. (*Mr. Everett.*) I gather from your evidence that depression does not exist to any very serious extent upon the part of Aberdeenshire that you have to do with?—Judging from my experience with the rental of the estate and from the demand that I have for holdings it would appear not. I mentioned a few minutes ago that I have a hundred applications for holdings on Lord Aberdeen's estates from people in the neighbourhood. If depression existed to a considerable extent at the present moment there would not, apparently, be the same demand for holdings at an increased rent up to 100 acres.

30,466. Have you had to do with these estates long?—For five years.

30,467. You had not to do with them in what we call the good times?—No.

30,468. And you are not able personally to contrast between now and then?—Not personally.

30,469. I gather also from your evidence that such measure of depression as there is arises from the fall of prices?—I have no experience of what is called agricultural depression. I can only judge from my experience as agent in the collection of the rents. I have no doubt probably if the tenantry were spoken to some of them might take a different view.

Fall of prices.

30,470. (*Mr. Channing.*) I believe you have had a considerable experience of agriculture in different parts of Scotland?—Yes, I was an estate agent in Berwickshire for 20 years, when I had much experience of what is called agricultural depression. I let some farms at a fall of 65 per cent. in Berwickshire before I came to Aberdeenshire: the average fall was about 25 per cent. on the farms in Berwickshire which I was letting, when I became agent for Lord Aberdeen about five years ago. The produce is, however, somewhat different there.

30,471. (*Mr. Everett.*) Has there been the same fall in the prices of agricultural produce in Aberdeenshire?—It would appear so. I took the fiars prices for the seven years ending with 1886 and the seven years ending with 1893—I thought that was the best way to get at the actual figures—and have given to you the results.

The currency.

30,472. I gather that your opinion is that that fall is connected with the appreciation of gold?—My opinion is that what is called agricultural depression is owing to the appreciation of the value of gold.

30,473. Has that appreciation come about mainly by natural or by legislative means?—My opinion is that it has come about by natural means—by the want of the gold. From 1851 to 1871 I believe there was a very

large quantity of gold produced and introduced into the currency; from 1871 to 1891 there was a very great falling off in the production of gold, and a much smaller quantity was introduced into the currency. Then coincident with that there was a large increase of agricultural products, and the population increased. Taking these things together, one must allow that the prices of produce would be likely to fall. My reason for thinking that the cause of agricultural depression is the appreciation of gold is because what we call agricultural depression has obtained all over the world; it does not obtain in Scotland, England, and Ireland only, but in Europe and Australia and the United States of America and Canada—everywhere in fact. Now, to find out the cause of agricultural depression we must look for some universal cause—some cause that affects the whole world, and the only cause that I can see that would have that effect would be the appreciation of gold. I have held that opinion for a long time.

Labourers' cottages.

30,474. (*Mr. Channing.*) About these cottages—the cost of each cottage, I understand, was 140*l.*?—The new cottages were about 140*l.*

30,475. So that the return, the interest in the form of rent, would be slightly less than two per cent.?—About that. The proprietor gets a rent of 3*l.* per annum for these cottages which cost 140*l.*, but he pays a high rate for the money which is expended on improvements under the Board of Agriculture.

30,476. In estimating what the probable repairs to these cottages will be, say in the next 30 or 40 years, do you think there will be much interest on the outlay?—Not much. My own opinion is that the indirect benefit of the cottages would be great. It is reasonable and proper that the farm servants should have suitable houses in order that they may get married and settled; at the present time they move about from place to place, and are not very comfortable as regards house accommodation.

30,477. You think it would be desirable socially?—Yes, highly desirable.

30,478. I should like to know whether, in reference to the houses and buildings on the holdings of various sizes, the amount spent is merely the amount expended by the landlord and whether there would have to be added to it an estimate for the labour of the tenant contributed thereto?—There would. The figures I have given do not include the carriages, and you would have to add to them probably from 10 to 15 per cent. to cover carriages. The tenants on the Haddo House estates drive the carriages and also dig out the foundations, but the proprietor does all the other work. In many cases the tenant finds stone, which can generally be easily got on every part of the estates.

Tiends.

30,479. I do not know whether this question is of any importance but I notice considerable variation in the amount of the tithe rent charge or teinds paid by the owner?—That would arise from the variation of what is called the fiars prices. What we call the teinds in Aberdeenshire are calculated upon the prices which I have been detailing to you and as these prices vary considerably from year to year the teinds vary accordingly.

30,480. I thought they were uniform?—No. The reason why the clergymen of the Church of Scotland are affected by agricultural depression is because a fall in the price of grain lowers their stipends.

Rates.

30,481. Then I see there is a very considerable drop in the rates payable by the owner from 1887, when they were 3,347*l.*, to 1892, when they were 2,379*l.*?—That may be explained in this way:—Until Whitsunday, 1890, the proprietor paid the whole of the road rates, &c. direct to the collector, and the tenants repaid one-half of these rates to the proprietor along with their rents. The tenants began in 1891 to pay their proportion of these rates direct to the collector, and have continued to do so since then.

30,482. Is there any allowance in the rent to the tenants, or does that come upon them in the form of addition to the rent?—The tenants have always paid their proportion of the road rates, &c., and the payment of this direct to the collector has not made any alteration in their rents.

Rise in rents.

30,483. You said that the advances of rent have been going on for a year or two; could you state in which year or about what time the rents began to rise again?—I think probably from the end of last year and this year up to now, say, during the last half of last year and the first half of this year.

Mr. G. Muirhead. 12 July 1894.

30,484. Last year Scotland was in rather a better position than England as regards crops, was it not?—Last year, I believe, we were in a better position, because we did not suffer, as you did in England, from the protracted drought.

The letting of rents.

30,485. You stated that when a farm falls in you give notice to some of the applicants on your list and that they usually offered an increase of rent of from 10 to 15 per cent., I believe?—That is when a farm is given up and the tenant does not want to take it again. I may mention that I have let about 300 farms within the last four or five years. In the case of a farm coming out of lease the estates' valuator walks over the farm and puts a reasonable valuation upon it; this valuation is laid before the tenant for his consideration, and it is also laid before the landlord for his consideration, and I may say that very few of these 300 tenants have left their farms.

30,486. The point I want to clear up is this, that where the sitting tenant—the old tenant—is willing to continue at what you consider to be a fair valuation of the farm, you do not give notice to those others?—No; it is only when the farms are given up. I would not consider it to be fair to the four or five men who had made an application for a holding if I were to select one of them, without giving the others an opportunity of offering for the holding. I prefer to give the whole of them an opportunity of offering for it. Supposing that there are five applicants, each having 1,000*l.*, and these five are all equally suitable, their characters all good, and that they are all well recommended men, I give them all an opportunity of offering. In the case of a farm of 100 acres which the sitting tenant has given up, I let each of the men who have privately applied to me for a holding of that size know that such holding is vacant, and I invite each of them to give me an offer for the holding and to state in his offer what rent he would be willing to give for it, and what improvements he would want. When their offers come in, I lay them before the Earl of Aberdeen for his consideration, and he selects the applicant whom he prefers. We do not always take the highest offer, we take the man who is the most suitable for the holding, and who has the most capital and the best reputation as a practical farmer.

30,487. The point I wanted to clear up was that there was not, even indirectly, a competition with the old tenant—that you do not consider that fair, if he was a reasonably good tenant, and would take it at a fair valuation?—Generally speaking, the land is always let to the old tenants. Of course, I sometimes have a difficulty in getting the old tenant to see the necessity of giving a fair rent for the land, but, as a rule, we get everything satisfactorily arranged.

Re-valuation of farms.

30,488. How is the valuation made? Is it based on what would be offered for the farm, or is it based on a calculation of the productive power of the farm and the fiars prices?—It is based on a number of data, including the quality and fertility of the soil, the state and suitability of the buildings, and the relative situation of the farm to railways, while the demand for land in the neighbourhood is also kept in view.

30,489. It is a real valuation then and not merely the market price?—It is a real valuation. When the estates' valuator goes over a farm to value it the tenant accompanies him with a spade, and the valuator examines the quality of the soil and sub-soil of every field. He also looks carefully over the buildings, and hears all the tenant has to say about his requirements. He then sends to me his report on and valuation of the farm, which I lay before Lord Aberdeen.

Importation of foreign cattle.

30,490. Now we have had a great deal of evidence with regard to the importation of store cattle; I will not ask you to give evidence upon this point in any detail, but what is your opinion on that subject?—I am of opinion that every reasonable precaution should be taken to prevent the introduction of disease from foreign countries amongst cattle.

30,491. Do you think that the average farmer in Scotland who wants to fatten stock, can get sufficient store cattle without importation?—I would not like to give an opinion on that point.

30,492. Have you any knowledge of the state of Aberdeenshire some years ago, and of the attitude of the farmers then; can you give any evidence as to the

Mr. G. Muirhead. 12 July 1894.

action taken by the farmers in the eighties to obtain a change in the terms of their leases?—I had no experience with regard to Aberdeenshire previous to the time that I went there.

30,493. You could not give any evidence on that point then?—No, not at a date before I went to Aberdeenshire.

Competition for farms.

30,494. I see that you expressed a very strong opinion before the Richmond Commission, that excessive competition had raised rents in some parts of the country far above the real agricultural value of the land, considering the fall of prices and the bad seasons; I should like to ask you, having regard to your general knowledge of Scotland, this one question—whether you think, in some parts of Scotland, not in the Haddo estate, this competition in the last few years has resulted in making the tenants pay rent out of capital?—So far as I have been able to judge the demand for farms in the south of Scotland is only a very recent growth. My experience of the south of Scotland was such that it was almost impossible to get a farm let at anything like the old rent before I came away, and I had a very long experience, I think, 20 years' experience as an agent in Berwickshire for five or six estates there. I had the greatest difficulty in letting; probably the fall would be about 25 per cent.; I have even let farms at 65 per cent. fall. At the commencement of my experience in Berwickshire, now 25 years ago, in the case of a farm of say 150 acres we would probably have 35 offers, and each offer higher than another.

Rents.

30,495. Do you think that farms in the south of Scotland, in the parts that you know have been over rented, and that that has contributed to the loss of the tenants' capital?—Over-renting is a comparative term. It depends upon the price the tenant gets for his produce. The rent is only what remains over after all legitimate expenses are paid. The farms which were let in Berwickshire from 1867 to 1872 or 1873, I cannot look upon as being over-rented until 1880, when prices fell; then, of course, they became what is called over-rented.

Terms of leases.

30,496. Can you tell us whether there has been any alteration in the terms of the leases to the advantage of the tenants of the Haddo estate?—Yes. We have had, lately, a modified lease prepared, giving the tenants, as far as we can, full advantages in arranging for the repayment of unexhausted improvements. The clause that we have adopted is as follows: "And it is "hereby declared that in the event of the tenant wishing "to apply to the holding during this lease any dissolved "or undissolved bones or lime, or purchased artificial or "other purchased manures, or to consume on the land "by cattle, sheep, or pigs any feeding stuffs not produced "on the holding, for which he intends to claim compensation from the proprietor, at his away-going he "shall give timeous notice to the proprietor or his factor "of the purchase of said manures and feeding stuffs, and "also of the date or dates when, and the fields and crops "to which the said manures are to be applied in order "that the proprietor or his factor may satisfy himself "that the said manures and feeding stuffs are actually "applied and used; and if the said manures and feeding "stuffs are of a value equivalent to the price paid for "them, and are applied and used to the satisfaction of "the proprietor or his factor, the proprietor hereby "agrees to pay compensation for the same to the tenant "according to schedule annexed and signed by the parties "as relative hereto." Then the schedule is as follows: "Schedule referred to in the foregoing lease: Scale "upon which it is agreed compensation will be paid "under the foregoing lease for unexhausted manures "and feeding stuffs. (1) Lime applied to the holding "to be held to last for ten years, and the price to "be paid as at the nearest railway station." I may mention that in Aberdeenshire the farmers apply a very small quantity of lime compared with the south of Scotland, probably not more than one ton per acre; in the south of Scotland from five to six or even up to eight tons per acre are applied—"five tons per "acre to be the heaviest dressing applied and for "which compensation will be paid. The rate of "exhaustion to be held to be one-tenth for each year "after lime is applied. (2) Undissolved bones to be "held to last for four years, and the rate of exhaustion "to be held to be for the first year after they are "applied four-tenths; for the second year three-tenths; "for the third year two-tenths; and for the fourth "year one-tenth. Six hundred-weight per acre to be "the heaviest dressing for which compensation will "be paid. (3) Dissolved bones, bone phosphates and "guano to be held to last for two years, and the rate "of exhaustion to be held to be, for the first year after "they are applied, three-fourths; and for the second "year one-fourth. Four hundred-weight per acre to "be the heaviest dressing for which compensation will "be paid. (4) Nitrate of soda and sulphate of ammonia "to be held to exhaust themselves in the first year of "their application—no compensation being payable "for them. (5) Feeding stuffs. The manurial value "of feeding stuffs, whether eaten on the ground or at "the steading, to be held to be one-third of the prime "cost of the same, and to be held to last for two years. "Two-thirds of the manurial value to be held to be "exhausted with the first crop taken from the land "after the feeding stuffs have been eaten thereon, and "the remaining one-third to be held to be exhausted "with the second crop taken from the said land. No "compensation to be allowed for unexhausted manurial "value of feeding stuffs after two crops have been "taken from the land on which they may have been "eaten [ ], to be held to be the largest sum "expended upon feeding stuffs in any one year for "which compensation will be paid."

30,497. Do these new leases, or the leases now in force, give the tenant the option of giving notice of breaking the lease at any period of the 19 years, and further do they give freedom of cultivation, or of selling the produce?—In many cases the tenantry are now arranging for five years' breaks, and Lord Aberdeen is quite willing to give them; but in most cases they want a full 19 years' lease. With regard to the clauses you have mentioned there is a cropping clause in the lease which I think is very beneficial.

30,498. Can you give us the substance of it?—The land is generally cropped upon the five, six, or seven course rotation. I dare say if the tenants were allowed to crop as they like they would not alter the cropping from these courses very much.

30,499. Do you allow them to sell hay and straw?—To a certain extent we do. There is in each lease a clause allowing them to sell hay and potatoes. It runs: "And further the tenant binds and obliges himself to consume the whole fodder and turnips upon "the said holding, and to lay out upon it the whole "manure made therefrom yearly, and not to sell or "carry off any manure or article capable of producing "manure excepting only potatoes and hay and of these "not exceeding [ ] acres of hay, and [ ] "acres of potatoes in any one year." Arrangements are made with the tenant on a liberal scale if he wants permission to sell hay and potatoes. The tenantry, according to my experience, generally prefer to have all the produce consumed upon the land. Their great difficulty is to get a sufficient quantity of straw.

Expenditure on improvements.

30,500. (*Mr. Dalton.*) In this table I see you have included new buildings under repairs and insurance. Can you say what proportion of capital expenditure on new buildings is allotted to repairs and insurance?—I am afraid I could not do so without referring to the factory books.

30,501. It varies very much in different years, does it not?—It varies very much; roughly speaking, these are for new buildings.

30,502. Very largely?—Yes, very largely for new buildings.

30,503. Is that expenditure likely to increase or diminish in future years?—I think that it will be likely to go on for a number of years. The demand for buildings upon the Haddo House estates is very great. Lord Aberdeen does what he possibly can, but the expenditure has been very heavy. You will see that during last year it was about 10,000*l.*, and the previous year 11,000*l.*; this year it will be about 8,000*l.*

Particulars of estates.

30,504. (*Mr. Chaplin.*) What is about the acreage of Haddo Estate?—53,000 acres, of which 43,000 are arable.

30,505. What is the average rent for the arable land per acre now?—17*s.* 1*d.*

Existence of depression.

30,506. How do you account for the fact of there being practically no depression at all in that part of Aberdeenshire as contrasted with the very severe depression in Berwickshire of which you spoke?—Probably it may arise from the comparatively greater fall in the value of agricultural produce in Berwickshire. In Aberdeenshire no wheat is cultivated, while in Berwickshire 3,764 acres were under wheat in 1892.

Mr. G. Muirhead. 12 July 1894.

Mutton and wool, which are relatively produced in Berwickshire to a much greater extent than in Aberdeenshire, have like wheat fallen greatly in price. It is also probable that the land in Berwickshire before 1880 was relatively more highly rented than the land in Aberdeenshire. It must also be kept in view that in Aberdeenshire there is a very large number of small tenants who do not pay gold for labour; they conduct the farming operations themselves with the help of their families, and they do not have the outgo of gold which the Berwickshire farmer has. In Berwickshire all the farms are worked by paid farm labourers, and the farms are generally all large, some of them extending to 1,200 acres arable. The average size of a farm in Berwickshire may be about 190 acres, while in Aberdeenshire the average size is 47 acres.

30,507. I believe I am right in saying that there may have been some of the same causes of depression in Aberdeenshire, but they have not been felt so much because of the small character of the holdings?—Yes. I may, however, mention that the Haddo House estates have always been, so far as I know, very moderately rented; consequently, when prices fell as they did about 14 years ago, the tenantry did not apparently feel it so much as the tenantry in the south of Scotland who were relatively more highly rented, the farms there being advertised and let by competitive offers being taken for them.

30,508. For the last 20 years there appears to have been a small change in the rental?—A very small change.

Fall of prices.

30,509. Where there is depression, or has been depression, in your experience, I understand, you attribute it to the general cause of the fall of prices?—Yes.

The currency.

30,510. That fall being due to the appreciation of gold?—Yes.

30,511. I did not hear your examination in chief, and therefore if you have already answered the questions do not repeat them; have you suggested any remedies for agricultural depression?—No.

30,512. Have you any remedies to suggest?—The only remedy which has occurred to me would be an increase of the quantity of gold in circulation—the introduction of more gold.

Small holdings.

30,513. (*Mr. Little.*) The figures which you have given us seem to shew that so far as the landlord is concerned the larger holdings are much more profitable?—Yes, apparently so, from a financial point of view.

30,514. I find, from the figures which you have given us, that the tenants of from one to five acres pay on an average 5*l.* 10*s.* a year, and you estimate the cost of buildings necessary for such a holding at 180*l.*?—Yes.

30,515. That at 5 per cent. would be 9*l.*?—Yes.

Rent.

30,516. The rent being from 5*l.* to 10*l.* on the average?—Yes.

30,517. So that on all the smaller holdings interest at 5 per cent. on the sum, which you have named as necessary to equip those farms, would be greater than the actual rent?—It would.

30,518. Therefore the land would be given in, but when you get to the larger farms that is not the case?—No.

30,519. If you take the farms from 100 to 300 acres, I find the average rent is 155*l.* Five per cent. upon the value of the buildings is 78*l.*, which is only about half the rental; whereas in the smaller holdings in every case the interest on the value of the buildings is greater than the actual rent?—Yes, that is the difficulty that obtains with regard to the increasing of the number of the smaller holdings. The difficulty about it is the supply of buildings for these small holdings. With regard to general improvements, I think it would be highly desirable if landed proprietors could have money at a cheaper rate of interest than they have it at the present moment.

State loans.

30,520. Would you approve of the suggestion which has been made that the Government should advance money to landowners to build cottages?—I would approve of money being got in that way, and the repayment of principal along with the interest being extended over a greater number of years than it is at present. I may mention that I am an Inspector under the Board of Agriculture. I have not done much work in Aberdeenshire since I went there, but I did a considerable amount of work in Berwickshire. At the present moment the rent-charge is over 25 or 31 years—about 25 is the general rule; and this involves a very considerable payment yearly to meet interest and repayment of capital. A farm-house, for instance, does not fall down in 25 years: indeed my own experience is that at the end of 25 years a well built house is about as good as it was when newly erected. If proprietors could have the repayment of the capital as well as the payment of the interest spread over a longer period than 25 years it would enable them as well as tenants to get the money at a lesser rate of interest—proprietors in the first place and tenants in the second place—for tenants as a rule pay some of the interest upon the expenditure on buildings. I think that would enable the proprietor to give the tenants new buildings at a less rate of interest than they can just now. They pay about five per cent., just now, for interest.

Mr. G. Muirhead. 12 July 1894.

30,521. Is it not six?—I understand that they have to pay 6*l.* 14*s.* per cent. and the tenants have to pay 5 per cent. If the proprietor could have money at 3 or 3½ per cent., with payments spread over, say, 40 or 50 years, it would, in my opinion, be very advantageous to estates.

30,522. If the Government could lend the money to the owners for a period of 50 years at something like 4½ per cent. including repayment of capital it would be a great benefit to the country?—I think it would at 4½ per cent. of rent-charge.

30,523. And if they lend the money to the Irish local authorities on those terms, probably they would be able to lend on the same terms to others?—Yes, I think it would be a great benefit to them.

Rents.

30,524. (*Mr. Clay.*) I gather from your evidence that the Haddo estates' tenants have never been highly rented, in a sense?—Not so far as I know; the estate has always been what is called moderately rented.

30,525. The present Lord Aberdeen, all along, and the Earls of Aberdeen before him have dealt very leniently and kindly towards the tenantry?—Yes.

Rack-rents.

30,526. In Berwickshire, which you know so well, rack-renting has been a very serious question, has it not?—I cannot blame the proprietors for taking the high rents. If I have a commodity to sell in the market I want to sell it at the highest price which it will bring. It was the same way with the proprietors in Berwickshire. In those years when there was a great great demand for land—from about 1866 until 1873 or 1874—there would be perhaps 20 applicants for a farm, and every applicant offering a higher rent than another for it; the proprietor would say to himself: "I do not "know the value of this farm; these men know the "value of the land and this man offers me 2*l.* for one acre "of it, I am not going to take 1*l.* for it; I will let agri-"cultural use of my land to that tenant for 2*l.* per acre." Then the difficulty occurred; no man foresaw in those days that there was going to be such a great fall in the prices of agricultural produce as obtained 10 years afterwards. The tenant who had taken his farm before the prices fell was bound by his lease to pay 2*l.* for each acre of land which he had taken. He came to the proprietor and said: "Unfortunately I find that I have "got to pay 2*l.* per acre for this land, and it does not "now yield me the profit that it did when I took it "from you 10 years ago; therefore I hope that you "will give me a reduction of rent;" and it lay with the proprietor to say whether he would give the reduction or not. If he would not give the reduction the tenant had to pay as long as he could do so.

30,527. You, as well as other people know, by experience, that the system of rack-renting has never yet been profitable to either landlord or tenant in the long run?—No doubt. I do not think that anyone was to blame for the high rents that were paid. It was just like the high price that obtained for wool during the American Civil War. When prices rise, everything else, or at all events the produce of land, rises in price, and when the produce rises in price the medium from which it is produced rises in value.

30,528. I am not saying who is to blame, but I am saying that the outcome now has proved this, that it is unwise to rack rent; that is all?—I would say that it would have been desirable, to have kept the rents at a moderate figure.

Expenditure on improvements.

30,529. (*Mr. Giffen.*) You show in the tabular statement, with reference to the Haddo estate, which is before us, that in addition to the expenditure upon agricultural improvements, Lord Aberdeen has spent

Mr. G. Muirhead. 12 July 1894.

about 75,000*l.* since 1872 on the general improvement of the estate?—Lord Aberdeen has spent, since 1872, 125,000*l.* upon agricultural improvements, and altogether about 200,000*l.* in the general improvement of his estates during that period, of which 100,000*l.* have been expended since 1883.

30,530. If it is not being too inquisitive, have you any objection to state what is the nature of the other improvements?—Planting, road-making, and improvements on the mansion house and policy grounds.

30,531. I only wish a general statement, to give us some idea of what the nature of the improvements is — whether they are fairly likely to have been expended in connection with the agricultural part of the estate or not?—The expenditure on planting was not included in the agricultural figure. Lord Aberdeen has been at a considerable expense in the formation of new plantations which are of great benefit to the estates for the land is very bare and very much exposed to the weather.

30,532. It is merely the most general idea I wish to have?—He has planted a good deal of wood since he became proprietor of the estates.

30,533. That is a permanent improvement of the estate, and not, strictly speaking, an agricultural improvement?—Yes, but we want more planting than we have now. It is very bare, and there is very little shelter on the estates. The greater part of the old plantations are about the policy ground, which extends to about 2,268 acres around Haddo House. It would be an advantage to the estates if they had more shelter from plantations.

30,534. What is the main explanation of the great fluctuations in that column for repairs, fences and insurances, which includes buildings and other improvements — column 8, for instance, in 1890 the expenditure is 1,824*l.*, and in the following year it is 6,717*l.*, and in 1892, 8,268*l.*?—That is accounted for in this way; there are, roundly speaking, 800 different farms on the estates, and these farms do not all fall out of lease in the same year or in any series of years; sometimes 100 farms come out in one year and sometimes only 26. I have had experience of as many as 175 farms coming out in two years. When the tenants of these farms have got their new leases they apply to have the improvements undertaken by the proprietor carried out at the beginning of their leases, and that varies the expenditure from year to year. In 1892 the proprietor spent 8,268*l.* upon new buildings and repairs, and in 1890 only 1,824*l.* as you mentioned, but in 1890 there were very few farms which came out of lease; there fell out of lease in 1892 and 1893, 175.

30,535. The result is that the variation in column 12, shewing the net income from the property after the payment of out-goings is to some extent accidental?—Yes, that is so.

30,536. To make a proper calculation we should have to allow for this conflicting element?—Yes.

30,537. There is not the same variation in the net income in reality?—No; it much depends upon how the farms fall out of lease. Only about 30 farms will fall out of lease yearly for some time to come.

30,538. Although the net income appears in the last year of all, 1892, at 25,000*l.* it would not be fair to take that year alone, but we should take an average of two or three years?—Yes.

Prices in Aberdeenshire.

30,539. You gave us the fiars' prices for Aberdeenshire. Can you give us any information as to the prices of other articles of agricultural produce not included in the fiars' prices?—I can. I brought some notes with me about beef.

30,540. Can you give us similar figures for beef to those that you gave us for these fiars' prices?—I have long advocated the advantage of what I would call meat fiars; that is to say, that we should have fiars of beef and fiars of mutton as well as fiars of grain, to let us know at what prices beef and mutton are sold in various parts of the country. That would be a great benefit, because we could at once see from the fall and rise how matters stood. The table which I have here, has been prepared not from my own experience but from some statistics which I consulted.

30,541. Does it give the figures for Aberdeenshire?—I am afraid not. The first part gives 20 years' prices of farm produce, ending with 1892, compiled from the agricultural returns issued by the Board of Agriculture. The second part gives the market prices of stock—the average wholesale prices of live stock per stone of 8 lbs at the Metropolitan Cattle Market.

Mr. G. Muirhead. 12 July 1894.

30,542. I wanted to get Aberdeen prices not prices of that official kind which we have access to ourselves?—I may mention that prices here rule the prices in Aberdeenshire. A great many cattle are sent to the London market.

30,543. Perhaps you will just state generally what you think the fall in beef has been?—I could not give an opinion.

30,544. Not without going into the prices?—No. I find from this schedule which I have prepared that in 1878, first class beef was selling at 6*s.* per stone of 8 lbs.

30,545. (*Chairman.*) Are these metropolitan prices?—Yes. In 1890 first class beef was selling at 4*s.* 10*d.*, so that there was a fall of 1*s.* 2*d.* on that quality of beef during that period. I regret that I cannot give you such figures for Aberdeenshire. So far as I can judge we have no easy way of getting at the actual selling price of beef in the county, and that is why I say it would be of great advantage to agriculture generally if we could have beef fiars and mutton fiars.

30,546. (*Mr. Giffen.*) My object is purely to get an explanation of why it is that Aberdeenshire suffers so little compared with other parts of the country?—I think I gave some explanation about that.

30,547. (*Chairman.*) Do they send their cattle up cheaper than they did?—No; I do not think that the railway rates have been decreased of late years. There was some talk about that some time ago, but I do not think the rates have been reduced. I think that I gave some explanation as to why in my opinion agriculture on the estates of the Earl of Aberdeen has not relatively suffered so much as it has done in the south of Scotland.

30,548. Still, if possible, I wish you to supplement it by some statement as to prices corresponding to those fiar prices which you gave, applying to the other products?—I tried very hard to get that before I came away, but had very little time to prepare the evidence. Of course, I did my best. Perhaps I could get it and supplement my evidence with it when I have more time. When I get home I could do that, probably.

30,549. I think perhaps that would be interesting, especially if you could give your Aberdeenshire figures?—With your permission I will do what I can to supply the Aberdeenshire prices.

(*Note by Mr. Muirhead.*) Since I returned to Aberdeenshire I have collated the whole of the weekly top prices of fat beef sold in the Aberdeen cattle auction marts from 1880 until 1893, from the columns of "The Daily Free Press" during that period, and find that the weekly average top prices for fat beef per cwt. of 112 lbs. were as follows:—1880, 78*s.* 9*d.*; 1881, 72*s.* 7*d.*; 1882, 81*s.* 4*d.*; 1883, 80*s.* 8*d.*; 1884, 78*s.* 2*d.*; 1885, 70*s.* 7*d.*: 1886, 65*s.* 7*d.*; 1887, 58*s.* 9*d.*; 1888, 65*s.* 6*d.*; 1889, 64*s.* 1*d.*; 1890, 64*s.* 2*d.*; 1891, 64*s.* 8*d.*; 1892, 64*s.*; 1893, 63*s.* 1*d.* The average top weekly price for seven years ending 1886 was 75*s.* 4½*d.*, and for the seven years ending 1893 it was 63*s.* 5½*d.* The average fall in the price for the seven years ending 1893, as compared with the seven years ending 1886, has been about 16 per cent.

The currency and the fall of prices.

30,550. With reference to your opinion that the fall of prices may be ascribed very much to the diminished production of gold since 1870 or thereabouts, compared with what it was in the 20 years before, are we to understand that you attach no importance to the improvement of the means of communication, the opening up of new countries, and the progress of invention, and causes of that kind, as bringing about a change of prices?—No; I think, that these may have had their effects also, but that the chief cause of what we call agricultural depression, is the appreciation of gold. I think the chief cause is that, and my reason for thinking so is because agricultural depression is universal, and has been universal; if it were confined to one country then I would look for the cause in that country, but it is all over the world, and we must look for a universal cause, like the price of gold.

30,551. But I suppose prices would not be at the present level if you had not had that improvement of communication and that opening up of new countries?—Probably, they would not have been so low as they have been; when a farmer has to pay me 100*l.* of rent, he takes into the market, say 120 quarters of oats, whereas 20

Mr. G. Muirhead. 12 July 1894.

years ago he would have required to take into the market only about 100 quarters to get the 100*l.* He cannot say to his land, "My rent is still going on, and I "require to take to market a much larger quantity "of oats to pay it than I had to do 20 years ago, and "you must therefore produce more oats per acre than "formerly." He cannot do that, the soil does not respond, therefore, he has now to take a larger quantity of oats into the market to get the money to pay his rent, and he exchanges the oats for gold, and pays his rent in gold, and he also requires to pay his labourers to a large extent with gold.

30,552. Suppose the process of opening up new countries and the increase of inventions and all the other causes which have been referred to of that kind had been arrested 20 years ago and there had been no further improvement from that point, would you have had a fall of prices at all?—I should say that if the importation of agricultural produce had been stopped, and if the population had increased at the rate at which it had done during the last 20 years, probably the prices would have been much higher than they are at present. I believe that foreign competition has had a considerable effect, but my opinion is that the appreciation of gold is the chief cause of the agricultural depression.

30,553. Are the two things, properly speaking, separable at all; can you distinguish between the one and the other, and ascribe so much to the one and so much to the other?—I should say it would be very difficult to do that.

Re-valuation of farms.

30,554. (*Mr. Whitehead.*) You told the Commission that in 1886 Lord Aberdeen offered a re-valuation of his farms to his tenants, and that that offer was accepted only by a proportion of them?—Yes.

30,555. Could you say what that proportion was composed of, whether small holders or large holders?—Three tenants holding under five acres, 11 holding 5 to 10 acres, 14 holding 10 to 20 acres, 32 holding 20 to 50 acres, 26 holding 50 to 100 acres, 33 holding 100 to 300 acres, and six holding 300 to 500 acres.

30,556. There was no difference in the applications?—No. I think, speaking generally, that farmers of all kinds applied for re-valuation.

30,557. Could you say why the other proportion did not accept the offer; was it that they were afraid their rents would be raised?—I think it was because they felt themselves in fairly comfortable circumstances, and that they did not need it.

30,558. They did not trouble themselves about it?—I think that they did not do so because they did not wish to have their rents altered. They have continued to pay the same rents as they did before 1886, and they do so now.

Small holders.

30,559. In your opinion, are the small holders as prosperous as the large ones?—I think so.

30,560. In the case of the very small ones, how do they supplement their income?—They work for their neighbours who have larger holdings, and do general work in their neighbourhood.

30,561. I think you said they have no special crops, and that they cultivate simply the ordinary crops?—Simply the ordinary crops; the small tenants generally cultivate oats, and turnips, and grass; they are very industrious.

30,562. A man cannot live on five acres, can he?—I should suppose that he cannot do so. Some of the tenants are very frugal in their living, and make it their aim to hoard as much money as will enable them to take a larger holding. A farm labourer will sometimes come to me and make an application for a holding, and I will find that he has 70*l.* or perhaps 100*l.* in the bank. The farm labourers in Aberdeenshire are generally very economical in their habits.

30,563. (*Sir Nigel Kingscote.*) Do you think, as a matter of fact, that a man can live and bring up his family—for I suppose they have families—on five acres of land?—No, I do not. I do not see how he could do so; the produce of such a small holding as that would not be sufficient to keep him and his family.

30,564. They must have some other outside employment?—Yes. A number of the tenants who have from five to twenty acres or so of land are shoemakers, tailors, joiners, and blacksmiths, and of other trades.

30,565. What amount of land do you think a man could live upon and cultivate?—I should think not less than about 30 or 50 acres.

30,566. What would be the rental of that?—About 17*s.* or 18*s.* an acre; it would be about 25*l.* or 45*l.*

Mr. G. Muirhead. 12 July 1894.

30,567. I think I understood you to say that you could build a single cottage of rather more modern style than has been built hitherto, for 140*l.*?—Yes, I have the plans of a cottage which has been erected at that cost.

Particulars of houses and buildings.

30,568. Does that 140*l.* include labour and everything?—Everything for one of a block of two cottages, except the cafriage of materials, which the farmer drives free of charge. The plan is for a two-storey block of two cottages, and gives to each a kitchen, scullery, pantry, and coalhouse on the ground floor, and three bedrooms up stairs. It provides 7,000 cubic feet of air space for each of the two cottages at a cost of $4\frac{5}{12}d.$ per cubic foot of air space; whereas an ordinary Aberdeenshire farm servant's cottage of one storey, and with all the apartments on the ground floor, affords only a kitchen, two bedrooms, scullery, and pantry, with an air space of 5,573 cubic feet at a cost of $4\frac{11}{12}d.$ per cubic foot of air space.

30,569. (*Mr. Whitehead.*) Are there two or three bedrooms?—Four rooms.

30,570. (*Sir Nigel Kingscote.*) You say 140*l.* for a single house, but you build them in blocks of two?—Yes.

30,571. (*Mr. Channing.*) It is 280*l.* for the two?—Yes.

30,572. (*Sir Nigel Kingscote.*) That makes a difference. I suppose you have got the very best material at the door?—Yes; the best material.

30,573. I mean the stone?—The best of stone; it is granite.

30,574. You have it at the door?—Quite near.

30,575. Is the tenants' labour thrown into that; does he do the hauling?—The tenant drives what we call the carriages, and also digs out the foundations free of expense to the proprietor.

30,576. I suppose you do not charge anything for fences?—There is nothing charged for fences. The price of the fencing of the two is 11*l.*, but I did not include the fencing.

30,577. Are outhouses included in the 140*l.*?—No. A privy, and an ashpit, and a small hen-house for poultry have been erected with home grown timber for each cottage. It is desirable to give the farm labourers a facility for keeping some poultry, if possible.

30,578. (*Viscount Cobham.*) It would come to 20*l.*, more would it not?—Yes, each cottage in the double block cost about 20*l.* more than a single Aberdeenshire farm servant's cottage, and for that 20*l.* the proprietor can give one room additional. The usual Aberdeenshire cottage has only three rooms; with the new plan four rooms are provided for only 20*l.* more.

30,579. You abolish the sleeping on the ground floor; you do not have it in these cottages?—Not in these cottages. The occupants can, however, put a bed into the kitchen in winter if they wish to do so.

Labourers' cottages.

30,580. (*Mr. Gilmour.*) Might I ask if your farm labourers prefer two stories instead of one storey?—Probably some of them would prefer to have the old Aberdeenshire cottage with all the rooms on the ground floor, but the families who have been occupying the new cottages are very highly pleased with them. I may mention that Mr. Clay has seen them; he has been in the cottages, and has questioned the occupants, and they have said that they were very much pleased with the accommodation.

30,581. Is it your experience that they keep fires going in those upstairs rooms in the winter?—I do not think they keep them always fired. Lord Aberdeen gives explicit instructions that all the bedrooms in the cottages are to have fireplaces. Many of the cottagers in Aberdeenshire get peat at a cheap rate, and they burn it in their fire-places.

30,582. I can only say that in other parts of Scotland there are very great difficulties, if you give them rooms upstairs, in making a man or a woman put a fire there, or to put their children up there. They will have it with a room off for their children downstairs; they keep the downstairs rooms in much better order, and use the upstairs places for stores probably, and not as bedrooms at all?—That is so. I have, however, been very much pleased with the way in which many of the tenants on Lord Aberdeen's estates keep the upper rooms. They

Mr. G. Muirhead.

12 July 1894.

have, generally speaking, well kept bedrooms, fitted with a nice arrangement of furniture.

30,583. Ever since you went there what state have those people kept those up stairs rooms in?—Since I went there a number of the tenantry have got rooms upstairs, and they keep them very nicely, wherever the houses are new and facilities are given for their doing so, but in the old houses they are sometimes not well kept.

30,584. I am speaking purely of farm labourers' houses?—I have not had much experience as yet of farm servants' houses in Aberdeenshire, for the farm servants there generally live in bothies.

Particulars of houses and buildings.

30,585. (*Viscount Cobham.*) As to the prices, I do not think you quite understood my question with regard to the extra 20*l.*; I meant that it would cost 20*l.*, in addition to what you have on the paper there, to provide fences and outhouses, would it not?—With regard to the cost of the fences—there was a wall built for 11*l.*, and then the expense of putting up the outhouses would be probably about 3*l.* or 4*l.*, the proprietor puts up the outhouses with wood. The outhouses which were erected consist of a privy and an ashpit, and a small poultry-house for each tenant; Lord Aberdeen is anxious to encourage the people to keep poultry, and the tenants are generally pleased to allow their farm labourers to keep some poultry, which is a great advantage, for the labourers get some eggs in this way for the use of themselves and their families.

30,586. Your pair of cottages comes to more than 300*l.* with all appurtenances?—No, what I have stated was the actual cost of them. The mason work cost 114*l.*; carpenter work, 97*l.* 10*s.*; slater work, 30*l.*, and plasterer's work, 38*l.*; in all 279*l.* 10*s.* The cost of the fencing was 11*l.*, and of the wooden outhouses about 5*l.*

The letting of large farms.

30,587. (*Chairman.*) I think you told us you have not had any experience of letting any of the larger farms to fresh tenants during the last few years?—Lately there was a case of letting a large farm to a new tenant. A tenant who occupied a 300 acre farm on the estates unfortunately became bankrupt and could not carry on the farm. Another tenant on the estates, who occupied a smaller farm, applied for a lease of the 300 acre farm, and offered to take it at a rent to be fixed by the estates' valuator.

30,588. That is to say, at the old rent?—Not at the old rent, but at the rent that the valuator would consider the farm is worth. To show you what Lord Aberdeen does in these matters, he arranged that the tenant who went out of the large farm should have a small farm on the estates, and he has now got a holding of about 50 acres on the property.

30,589. We do not want to hear about him, but with regard to this larger farm, was it let at an advance of rent?—No, the estates valuator's valuation is about 9 per cent. under the old rent.

30,590. With that exception you have not had any instance of letting a larger farm?—Not recently.

30,591. With that exception you have had no experience of re-letting the larger farms to fresh tenants?—Not recently.

30,592. You have re-let them to the old tenants?—I have had, in five years, about 300 lettings, and nearly all the old tenants.

30,593. Do those include a certain number of large farms?—They do, some up to 500 acres.

30,594. In those cases have you re-let them at the old rents?—Generally speaking, at a fall of rent.

30,595. Of how much?—I should say, speaking generally, perhaps 9 or 10 per cent.

30,596. I think you said you had a great number of applications for new farms?—Yes, I have about a hundred.

30,597. Including men with capital up to 2,000*l.*?—Up to 3,000*l.*

30,598. What amount of capital should you say is required per acre for a large farm?—I like to have 10*l.* an acre, if I can get it, but I have been letting at 6*l.* or 7*l.*

Mr. G. Muirhead.

12 July 1894.

Tenants' capital.

30,599. Then there must be men with capital enough to farm 200 acres ready to come in?—Yes.

The letting of large farms.

30,600. Then it would not appear that there was any great difficulty with respect to the larger farms?—I think there is considerable difficulty in getting the old rents for the larger farms, because there is less demand.

30,601. I understood you to say that the farms were re-let to their occupiers at the same, or perhaps a little less rent?—The larger farms would be let at a little less rent. On farms of 200 acres and upwards I should say the fall has been about 10 per cent.

30,602. In the case of the farms from 100 to 200 acres, have they been let at the old rents?—Something like the old rents, or probably at a little fall upon them. Up to about 100 acres, I think they would command the old rents.

Condition of farmers.

30,603. Is there any indication on Lord Aberdeen's property that the farmers have lost any portion of their capital?—I heard about some having lost capital, but judging from the rental and the demand for farms, it would appear that, generally speaking, the farmers are in comfortable circumstances. The farmers are a very hard working and industrious class of men.

30,604. And generally in comfortable circumstances?—Generally; I would suppose so, so far as I can judge.

Reduction of labourers.

30,605. Has there been any reduction in the number of labourers in the district?—Not to my knowledge.

30,606. Not to your knowledge?—I do not think so.

The currency and wages.

30,607. On the assumption that the appreciation of gold is the cause of whatever depression there is, how do you account for the fact that the wages of labourers have not been reduced?—Because I think, as a rule, the farmers consider the labourers should be well paid for the work they do; I think the general feeling on the part of the farmers is, that the labourer does not receive more wages than he is entitled to have.

30,608. I understood you to say that the labourers were much better off because their wages went much further?—So they are.

30,609. Therefore the labourers might have had a small reduction of wages, and still have been where they were?—Yes, but still, so far as I can know the farmers have made no movement towards the reduction of labourers' wages in Aberdeenshire; the purchasing power of the labourers' wages now is greater than what it was 20 years ago.

30,610. Does it not strike you as a somewhat remarkable fact, on the assumption that the appreciation of gold is the cause of the depreciation of prices, that the wages of labourers have been maintained?—It does so, but I think that the general feeling on the part of the Aberdeenshire farmers is, that the labourer is well worth the wages which he receives; there is no indication of a desire on the part of the tenants to reduce the labourers' wages, so far as I know.

Covered yards.

30,611. (*Mr. Lambert.*) Do you find covered yards for dung advisable?—On Lord Aberdeen's estates, there are very few farms which have covered yards upon them. All the cattle are fed in "byres," and are all tied by the neck.

30,612. Is there a demand for covered yards: do you think them advisable; do you think they save manure?—There was a demand for covered yards in Berwickshire, but in Aberdeenshire the farmers appear to prefer byres for cattle feeding. I think covered yards are advisable where straw is as plentiful as it is in the south of Scotland, and I am of opinion that the manure made in them is of better quality than that made in open cattle courts.

The witness withdrew.

Mr. C. Hoare.

Mr. CHARLES HOARE called and examined.

Mr. C. Hoare.

12 July 1894.

12 July 1894.

30,613. (*Chairman.*) You are a banker connected, I believe, with the firm of Hoare and Co., Fleet Street?—Yes.

30,614. You also own and farm land in Kent?—Yes.

30,615. Whereabouts in Kent?—At Staplehurst.

30,616. You have about 700 acres in hand?—Yes.

30,617. Have you also land let to tenants?—A very small amount.

30,618. You have got very nearly the whole of your land in your own hands?—Yes.

30,619. How long have you had it in hand?—About 15 years.

Experience of farming.

30,620. What has been your experience as a farmer?—It has been an unfortunate one as far as financial results go. I think part of the loss that I have sustained, might be fairly credited to the improved value of the freehold.

30,621. You found the land in a bad condition, and you have brought it up into a good condition, I presume?—Yes.

30,622. Do you grow hops?—Yes.

Hop growing.

30,623. What has been your experience in that?—The hops, I should say, have paid; in some years they have paid very well, and taking the whole series of years, I should imagine that the hops, to use a Kent expression, have held their own.

30,624. What amount of acreage in hops have you got?—It is now, I think, 100.

30,625. That is a large amount?—Yes; in the Weald of Kent about 10 per cent. is the average and reasonable amount, but I have made it rather more, because I found that hops were the only things that paid and had any chance of paying.

30,626. What is the condition of the agricultural labourers in your district?—I should say that they were as well off as in any part of England. I have often asked the question, and my bailiff has told me that a good worker, with a healthy wife, would earn nearly 23*s.* or 24*s.* and sometimes as much as 25*s.* per week. The wife is able to do easy work from the 1st of April to October.

Wages.

30,627. In tying hops?—In tying hops, fruit-picking, haying, and hop-picking.

30,628. Has there been any reduction in the wages of labourers in your district since you have farmed?—They were raised and now they are slightly lower.

30,629. When were they raised?—I could not tell you accurately.

30,630. How much were they raised?—From what dates would you take?

30,631. Say, compared with 15 or 20 years ago?—More than 20 years ago, I suppose, the average wage was 2*s.* a day.

30,632. Then what did they rise to?—At least 2*s.* 6*d.* A man would earn more by piece-work, of which there is a great deal.

30,633. What have they gone down to now?—I think last winter they were down to 2*s.* a day, 12*s.* a week.

30,634. Is that the average; do you say they have gone back to the old rate fully or not?—Not fully, I should think. I would not like my evidence on this point to be taken as positive, because I never paid the wages myself.

30,635. Of course it is important, in order to know the general condition of the different classes of agriculture, what the effect has been upon the labourer?—Certainly. I should say within the last few years in Kent the condition of the agricultural labourer has improved enormously.

30,636. Although the wages may have been slightly reduced after the rise, I presume they get more for their money?—Certainly.

30,637. Then the low prices have been a great advantage?—A very great advantage to the agricultural labourers, because their wages have not been commensurately reduced.

Fall in prices and appreciation of gold.

30,638. Then what is your opinion of the causes of the agricultural depression?—I should say the great fall in prices.

30,639. What do you consider the fall in prices due to?—Putting it shortly, it is the appreciation of gold due to the demonetisation of silver, and I think the prolonged peace is not to be lost sight of. The appreciation of gold affects prices because the proportion between produce of all kinds and the volume of currency has been upset, owing to the large increase of the former, and the concurrent diminution of the latter.

30,640. Have you formed an opinion yourself as to what is the average appreciation of gold or depreciation of prices?—I should like to say as a preliminary to that, that I do not pose here as a professor of these difficult questions. I have considered this question as a farmer.

30,641. Yes, but you are also a banker, and one would like therefore to know how far your study of this interesting question has proceeded from that point of view as well as from the point of view of the farmer?—I think the scientific evidence (and you will require a scientific answer to that to do it justice), has been so well given by Professor Foxwell that I would rather leave it in his hands, also in the hands of Mr. Everett, who has given you scientific evidence on the same point. I could only give you evidence as an amateur, so to speak. I was led to take an interest in this question because I had to take the chair at an agricultural meeting, and there the chairman is always expected to make a speech on agricultural subjects. I thought it was no good telling them about bullocks, and sheep, and corn, and grass, and I tried to think of something to say that would interest them particularly, viz., the question of prices. The fall in prices was just then beginning to become a very pressing question.

30,642. When was it you addressed this meeting; the fall in prices began in 1878?—I am not quite sure.

30,643. You said just now you had to attend an agricultural meeting, and to make a speech, and you thought it well to enter upon the subject of prices. I just ask you when that occurred?—I should imagine about seven years ago.

30,644. You then entered upon the subject?—And gradually began to think more and more about it. At first one was very doubtful about the cause of agricultural depression, whether it was due to the appreciation of gold, but when I came to think of it, and to give more and more attention to it, it appeared to me that what a farmer does when he sells his wheat is to buy gold with it, and that he has now to give two sacks of wheat to get the same quantity of gold that one sack of wheat got before. So I came to the conclusion that as that fall of price, or rise in the value of gold, was general, as *e.g.* in the case of wheat, or wool, or iron, or sugar, or tea, and other articles in general use, the appreciation of gold was affecting the agricultural interest more than anything else.

30,645. Do you consider the depreciation of prices wholly due to the appreciation of gold?—No; I think as I said before that it has something to do with the prolonged peace, and I think it also has to do with improved means of communication.

30,646. Increased communications?—Yes; fall of freights, and the very large increase of productions of all kinds also has to be borne in mind, and that all added to it. We ought to have had concurrently an increase in the currency, instead of that we have had a contraction of currency.

30,647. Have you formed an opinion at all as to the relative importance of those two different causes, namely, on the one hand the prolonged peace and the greater production, and on the other hand the appreciation of gold?—I think the currency question is much the larger and greater cause. I say, in my proof, that "during the last 20 years population has grown, and "productions of all kinds have enormously increased, "but gold, our standard of value, has not increased in "proportion, because though the annual output from "mines is larger than it was, it has been in special "demand for currency purposes owing to the demone-"tisation of silver." I have got a letter here from my bailiff dated 1882, showing the fall of lambs. He sold his lambs then, in February, at 68*s.* a head; I suppose we should be very glad now to sell them for 38*s.*

Fall in the price of lambs.

Mr. C. Hoare. 12 July 1894.

30,648. (*Mr. Lambert.*) The same weight, the same breed and precisely similar lambs?—I imagine that is about the price.

30,649. Would you say that lambs have gone down two-thirds in price?—Yes, I should think so.

30,650. (*Mr Everett.*) Should that not have been 48*s.* instead of 68*s.*?—It is 68*s.* "Lambs sold very dear, we marketed some good lambs as high as 68*s.*"

30,651. (*Mr. Lambert.*) Would they be 12 months old?—This is dated February.

30,652. The lambing season comes on about February would they be 12 months old?—They would be nearly 12 months old. It comes on in March and April.

30,653. (*Mr Everett.*) They would have to be what we call hoggets?—They would have to be a year old?

30,654. Yes?—They were not quite a year old.

30,655. (*Mr Whitehead.*) The Kent lambs are born about April?—Yes.

Production of gold and commodities.

30,656. (*Chairman.*) You consider that while the production is greatly increased owing to prolonged peace and so forth, and inventions, and fall of freights, that the production of gold has not increased in the same ratio, that is your view?—My view is that gold is different from all other produce, wheat, and wool, and sugar, and tobacco, which are consumed in the year, so that an increase we will say of 10 or 15 per cent. of the produce that is consumed in the year would have a very great effect. It is said that the output of gold from the mines has risen from 19,000,000*l.* to 25,000,000*l.* a year; that you would naturally suppose would have an enormous effect. But, if I am right, gold is not a thing like wool, and cotton, and coal, which is produced and consumed, but it is added to the enormous stock already existing in the world. So that an increase of 20 per cent. in the annual production is an infinitesimal increase in the entire mass of gold that is available for commerce or as the standard of value; so that this apparent considerable increase of gold, to say nothing of the largely increased use of gold in the Arts, has not anything like the effect that a person would expect it to have; besides which the demonetisation of silver has had an enormous effect.

30,657. I do not quite understand the analogy which you have drawn or intended to draw; in the case of wheat and other produce, the production is for the year and it is consumed within the year?—Yes.

30,658. In the case of gold, the production every year is added to the stock?—Yes.

30,659. I rather wish you to explain more fully what deductions you draw from that?—I wish to draw the deduction that the increased production of gold that is now going on will have a much slower effect than anybody would imagine, because instead of being such an increase as that of a similar quantity of wool and of wheat would be, it is added to the enormous existing stock, and so it is only an increase (we will say that the stock is 1,200 millions), which would make it 1,226 millions instead of 1,200, and that is an infinitesimal addition compared with what it would be, were it consumed in the year. Supposing, for the sake of illustration, that that the whole annual production of wheat is so many millions of quarters, if there was an increase (as in the case of gold) of from 19 to 26 million quarters, that would have an enormous effect, because it is consumed in the year. But each year's output of gold is not consumed in the year, it is added to the stock.

30,660. It rather occurs to me that the fact that the gold continues to remain in existence, and is not consumed in the year in which it is produced, would rather make its effect go further, because whatever is produced each year is continually adding to the fresh amount of the existing stock, whereas in the other case of the mutton and wheat and other produce, whatever increase is produced in the year is consumed in the year; but you do not hold that view?—No. Take wheat; if the whole consumption of last year was 19 millions, produced and consumed, and we suddenly add to the yield an increase of seven millions it would have a very great effect.

30,661. (*Mr. Chaplin.*) You mean it would have a great effect on prices, that large sudden increase of one year's consumption?—I imagine it would. Another cause generally stated is that we have constantly had over production. My idea is that if over production is the cause of the agricultural depression of the last 15 years, if we had had over production year after year, by this time we should have had enormous stocks—granaries would be bursting; there would be enormous stocks all over the world. What is the fact? I believe the stocks now are extremely low, as is proved by the extremely small demand for money. There is no demand for money at all. Why is money usually wanted? It is to hold stocks and to discount bills. The smallness of the demand for money proves the very small amount of stocks held, and that is what you would naturally suppose would be the case. Anybody who held stocks for the last 15 years has lost money enormously, because stocks are constantly depreciating. In a depreciating market any trader holds as little stock as he possibly can; and therefore I say there cannot be any accumulation of stocks because there is no demand for money. Therefore the idea that there has been over production year after year is mistaken—at all events the outward and visible sign of it is non-existing. I should like to say that it is commonly said that you cannot have any scarcity of gold because of the stocks of gold in London and Paris and elsewhere. I should like to give you rather a homely illustration. Years ago we heard of a great famine in Egypt—the famine was sore in the land. At the same time there were enormous stocks of corn; Joseph had as much corn as he wanted, and more than he could do with, but the famine was sore in the land. And I say that is an illustration of the present situation. We have got enormous stocks of gold in the banks of France, England, Berlin, St. Petersburg, and various other places, but the famine for currency is very sore in the land. We can always get gold it is perfectly true; all you have got to do is to go to the bank and tender your banknotes. How do you get your notes? By exchanging a double amount of produce to get the same quantity of currency; but that, I say, proves the fact that the famine is sore in the land for currency.

Fall of prices and appreciation of currency.

30,662. (*Chairman.*) You state in your note here that when prices fall from the abundance of crops they are a benefit—to the world, I suppose—but when they fall from the appreciation of the currency there is damage. Will you explain what you mean by that?—I should like Professor Foxwell to do that. I think, generally speaking, the explanation is that when you have got an abundant harvest you can afford to take a lower price for your produce; but supposing, as last year, you have a famine harvest it is ruination to take the current prices.

30,663. Supposing the abundance is due to the opening out of fresh countries, or of the lowering of freights, so that the produce of other countries can come more easily here, do you consider that a benefit or not?—I think it is a benefit as Free Trade is a benefit. I am thoroughly in favour of Free Trade.

30,664. I only want to know your view?—Would you ask me the question again.

30,665. You say here: "When prices fall from abundance of crops there is benefit" and you explain that you mean by that where there is a good harvest and the abundance results from that, that is a benefit to the country. I then put to you the question: Where the prices fall from the opening out of fresh countries and from increased production of that kind, and from the lowering of freights, do you consider that to be a benefit to the country?—I do not think I am prepared to give an answer straight away. I have not thought about it enough.

30,666. I think you said just now that you considered there was over production?—No, excuse me, I said just the contrary. I said there were no signs of over production. I said the signs of over production would be accumulation of stocks, granaries bursting, and money dear to hold them.

30,667. You go on to say that where the fall of prices is due to the appreciation of the currency that there is damage to the country?—Yes. My idea is that that shows the appreciation of debt. Every person carrying on a business does so to a large extent with borrowed money or with credit, and when prices fall your debts become more onerous. That is partly what I mean.

30,668. Then do you consider that agriculture has suffered equally with other trades from the appreciation of gold?—Yes.

Protection.

30,669. Do you regard that Protection as a remedy is impracticable?—Protection I regard as utterly hopeless and impracticable, because I consider that Protection is more or less a class benefit. If our remedy is to be an

Mr. C. Hoare.
12 July 1894.

effective remedy it must be one that will benefit all producers. What is commonly called Protection means Protection for agriculturists only, and to that we should have the antagonism of all other producers as well as of all the people with fixed incomes. So I think even if agriculturists were to agitate all they possibly could—say that they are in the proportion of one out of ten—they would have nine against and one for them; it would be a hopeless crusade.

30,670. Then you discard protection as a remedy for the depression?—Certainly.

Burdens on the land.

30,671. Have you considered the other remedies which have been suggested, such as the reduction of the burdens on land and so forth?—Other remedies suggested before the Commission, such as a further reduction of the burdens on land, seem to me most absurdly inadequate in view of the magnitude of the crisis, though they may be useful and beneficial so far as they go. I would glady accept them if they were given to us. They may be beneficial, but I consider they are also, to a certain extent, selfish. Because if I shift my burdens from my farms and put them on to the people with fixed incomes or on other producers, I am shifting my burdens on to other people's shoulders and to that extent it is like Protection, and we should have the opposition of other producers as well as of the people with fixed incomes. But, of course, there is a certain amount of equity in this, because when these burdens were put on the land, land and real estate was the only capital, and so there is a certain amount of justice in shifting those burdens.

Bimetallism.

30,672. Then you have come to the conclusion that the best remedy for the depression is by operations affecting the currency?—Yes.

30,673. And by increasing the volume of the currency?—Yes.

30,674. Have you come to the conclusion that it is in the direction of bimetallism that we must seek for a remedy?—In conjunction with the other civilised powers of the world. I would not attempt it by ourselves.

30,675. By bimetallism you mean the re-adoption of the double standard at the old fixed ratio of 15½ to 1?—Yes.

Establishment of a ratio between gold and silver.

30,676. Do you consider it an essential feature of your scheme that we should re-establish the old ratio at 15½ to 1?—I believe it to be; I am very sorry I have not brought the reference, but I have no doubt you have seen it in the "Times"—a letter from a French gentleman pointing out that any other ratio would be more difficult than the ratio of 15½ to 1. We will take the Bank of France. The Bank of France now has something like 50 millions sterling of silver which stands in her books at 5*s.* an ounce, 5*s.* an ounce is the ratio of 15½ to 1. So that if any other ratio were adopted it would involve the Bank of France in an enormous loss. Supposing you took the present value of silver which is, I suppose, about 2*s.* 2*d.* or 2*s.* 3*d.* it would involve the Bank of France in a loss of about 30 millions sterling, equal to her whole capital, and more. As regards England, I do not exactly know what the amount of circulation in silver is in shillings and halfcrowns and so on—say 20 millions; if we had to re-coin our silver and revalue it at any other ratio than 15½ to 1 we should be involved in that loss, whatever the loss would be. Supposing we took the present prices it would mean a loss of 10 millions and more—12 millions. So that all nations are interested in going back to the old ratio of 15½ to 1, because they have already got an enormous quantity of silver, even the gold standard countries.

30,677. Then you do not agree with Mr. Foxwell in recommending that the ratio in future should be 20 to 1?—I would submit to Mr. Foxwell's better judgment, I only give you my own opinion, and I told you particularly it was not a scientific opinion, it was the opinion of a farmer.

30,678. It is the opinion of a banker, too?—Well, I am a farmer here.

30,679. Then I think I am entitled to ask you whether, as a banker, you consider it is possible to go back to a ratio of 15½ to 1?—I should say yes.

30,680. You think it is possible?—Because you see we are interested already, as I told you before, in our present silver currency; the Bank of France is interested to the extent of 50 or 60 millions, and those two instances, I think, are sufficient.

30,681. What, in your opinion, would be the immediate effect of establishing the ratio between gold and silver at 15½ to 1; would it be to raise prices immediately?—I do not suggest that it would be desirable to establish at once the 15½ to 1. These are only my own amateur thoughts, we must go by degrees. I say bimetallism, or the re-adoption of the double standard at the old fixed ratio of 15½ to 1 is, in my judgment, the only possible method of achieving the result. To obtain it, a conference of the civilized powers should again be summoned with the view to the adoption of measures for the increased use of silver for currency purposes, with the intention of paving the way to bimetallism. It might be necessary for different powers to adopt different tentative measures; for instance, England might agree to issue three millions of 20*s.* and 10*s.* notes, based on coined silver, per annum for three years, which should be legal tender for all purposes up to 10*l.* I do not think there is any practical doubt that such notes, made payable in silver, would be extremely popular, as is proved by the enormous use of postal orders and the large circulation of 1*l.* notes in Scotland and Ireland.

Mr. C. Hoare.
12 July 1894.
Immediate effect of establishing a ratio.

Effect of raised prices on the country.

30,682. Is your object, and your expectation by such a measure, to raise prices?—Yes.

30,683. To raise prices considerably?—Yes, as they have considerably fallen.

30,684. Do you think that would be to the advantage of the country?—I would not say to every individual in the country, because I consider the country is divided into two classes, producers and people with fixed incomes, and there you have got war, I say, and the war will become more acute.

30,685. It will be an advantage to the producers then?—Of all kinds.

30,686. And not to consumers?—Not the people with fixed incomes, I say, from the Chancellor of the Exchequer down to the policeman, including all fund holders and debt owners.

Effect of raised prices on the labouring classes.

30,687. Would it be an advantage to the labourers of the country?—I think so, but the workman, it is said, would have to pay more for all he consumes if the supply of currency were increased and how would he like that? If, however, the working classes are to look in the future for anything like regular employment, either wages will have to be considerably reduced or prices would have to be materially advanced. Of course, I mean it is impossible to carry on business at a loss as we are now doing. There can be no doubt which alternative of the two they would prefer, keep up, they would say, our wages even if we have to pay more for what we consume, because experience has taught us that rising prices always give us the best chance of a rise in wages. Mr. Maudsley, the secretary of the cotton spinning employes, takes that view very strongly. I am asked from an agricultural point of view as well as from a manufacturing one; that is why I am so in favour of a currency reform, because it unites producers of all kinds in a common interest. If we do nothing to arrest the fall of prices we must either abandon our farms, close our mills, and other industrial undertakings, or we must reduce wages, and any reduction of wages I look upon, in these times, as a tremendous risk to the State, almost, as we see in America at the present moment, to civilization. I think in advocating currency reform, agriculturists would have the support of the manufacturing interest, which at present is in great danger of leaving the country altogether, and going to India and China and Japan—places where labour is cheap.

30,688. You told us a little while ago that the agricultural labourers were much better off than they ever had been?—Yes.

30,689. Mainly owing to the low prices?—Yes.

30,690. The effect of raising, artificially, the prices in the manner you speak of would be to increase the prices of the articles which they consume?—Yes.

30,691. Do you think they would be better off from that?—They would be better off only in the sense that they would continue in their occupations. The villages would still be inhabited and work would be carried on; otherwise if the prices of wheat and other agricultural produce continue to fall, more and more land will go out of cultivation, more and more houses become empty, and more and more people will go into the towns. That is how it affects them, and any thinking man sees and knows—agriculturists I am speaking of—

Mr. C. Hoare.
2 July 1894.

that farmers cannot grow their wheat at the price at which it now stands.

30,692. Then it is, rather, fear for the future?—I think many farmers are living on their capital and have not realised the fact that they are losing money hand over hand, and, I say, if they took out proper balance sheets and really knew how their accounts stood, instead of one farm being given up in 50 we should have 25 farms given up in 50, and an enormous number of labourers thrown out of work.

30,693. (*Mr. Chaplin.*) You mean that the great bulk of the farmers, as far as you are acquainted with them, do not keep accounts?—They do not keep accounts and have not the slightest idea of their balance.

30,694. If they did keep accounts and knew how they were they would give up business at once?—They would give up business at once if they dared.

30,695. And then the men would be out of employment?—The men would be out of employment, that is what I mean.

Difference between the metals and other commodities.

30,696. You pointed out to the Chairman, just now, that the metals differed from other commodities like wheat and wool in this respect, that the metals do not perish and they are not annually consumed, and I understood you to argue from that that the important thing in the case of the metals, as affecting prices, is the existing mass and not the annual output, which is only a fractional addition to the mass. Do I correctly describe your view?—That is as far as I can understand it.

30,697. In the case of the other commodities like those of which you spoke, you pointed out that they were annually consumed, and that therefore an increase or a decrease in their case was a matter of primary importance?—It would have very great effect.

30,698. You heard the evidence, I think, of the last witness?—Just the end of it.

Fall in prices and appreciation of gold.

30,699. I understand then from what you say that you agree with him, that in your judgment the main cause of agricultural depression is a fall in prices due to the appreciation of gold?—Yes, or if you like to put it in another way, from the demonetisation of silver, which brings about the appreciation of gold.

30,700. What you said, I think, was that, in your opinion, the appreciation of gold was due chiefly to the demonetisation of silver?—Yes.

30,701. That was another cause?—Yes.

30,702. Do I understand from your views that you are of opinion that unless some alterations are made in the currency which would have the effect of relieving the present appreciation of gold you do not anticipate any permanent or sensible improvement in the agricultural situation in the future?—On the contrary, I think things are rapidly getting worse and worse—very rapidly—and that farmers are just beginning to appreciate the tremendous losses that they have had, both in capital and in income. The enormously increased burden of debt is the most alarming feature of the whole situation.

30,703. Do you mean that the farmers are only just beginning to appreciate their losses, or that they are just beginning to appreciate what you regard as the cause of those losses, for they must have been aware that they have been losing money?—Both, and also the hopelessness of the situation.

Bi-metallism.

30,704. Then the proposition that you make to the Commission as a remedy for this, I understand, is the readoption of what is called bimetallism?—Yes; that we should favour such steps by concerted action with the other civilised powers of the world as will pave the way for the introduction of bimetallism. I would not attempt to do it at once; I think we must have introductory steps, and do things by degrees.

30,705. What you want, I understand is, concerted action among the different powers in the world, which should pave the way, ultimately, for the adoption of the bimetallic system?—Yes.

30,706. Have you studied the Report of the Gold and Silver Commission?—I have read very little of it.

30,707. Have you read the recommendations which were contained in the third part of the report?—I think I did. It was some time ago, and I am not prepared to be examined on it.

30,708. You are not sufficiently acquainted with those recommendations to say whether you agree with them or not?—As far as I remember, their recommendations were among the reasons that made me adopt the ideas of bimetallism.

Mr. C. Hoare
12 July 1894.

30,709. Then you do approve of them?—Yes; as far as I remember, I think it was one of the causes that led me to adopt bimetallism.

Effect of raised prices on the labouring class.

30,710. (*Mr. Giffen.*) With regard to your idea that if we are to look in the future for anything like regular employment for the working classes, either wages will have to be considerably reduced, or prices will have to be materially advanced; I suppose you do contemplate that the workman is to be placed, as far as his income is concerned, in rather a worse position than he is now; that is what you assert?—I think it is inevitable, because he has got too big a share of the cake.

30,711. You have considered that point carefully with reference not only to agriculture, but to the general industry of the country?—Yes, and particularly where it comes into competition with industry in countries having a silver or other depreciated currency.

30,712. You hope, by this change that you contemplate, to put the workman in a worse position than he is now; to give him a smaller share of the cake?—You put it in a disagreeable way, if you will allow me to say so.

30,713. Still, that is exactly what you contemplate?—No, I would not admit that; I would say that I would put him in a position to maintain himself in honest industry.

30,714. But still you are not going to give him the same real income?—I am not going to starve him; if nothing is done, as I view the case, there will be starvation.

30,715. You propose to give him a smaller real income, and a smaller share of the good things of life than what he has now; that is what you hope to effect?—My object is to keep him in honest industry.

30,716. How much business is being carried on now at a loss, do you think, how much in proportion to the total business of the country?—You must not ask a farmer that question.

Profits banking.

30,717. Is banking being carried on at a loss, may I ask?—We are lending money at ½ per cent.

30,718. But you are paying very fair dividends as far as one can observe from the price of the shares in the Joint Stock Companies?—I should like to tell the Commission that that is a very misleading thing to say. We will take a large joint stock bank; to-day they are paying 20 per cent., and as Mr. Giffen says, "What large profits!" On the contrary the profits are extremely small, when you really find out what the capital employed is. They pay 20 per cent. on the proprietors capital of a million, but the total deposits used in the business are 20 millions on which only 1 per cent. is earned. Supposing their capital was reduced, and returned to the shareholders to the extent of 500,000*l.*, then their profits would be 40 per cent., but still only 1 per cent. on the capital employed in the business. We bankers are allowed to trade with our customers' balances.

30,719. I have heard that the banker does not need any capital at all in his business. I was informed so, many years ago, by a most competent banker and economist?—We, and our predecessors, have been bankers for 230 or 240 years, and I should say the chief capital required for bankers was credit.

30,720. But you cannot say, to come back to my question, that bankers are carrying on their business at a loss, they are making profits of some kind?—If you say you are making profits of 1 per cent. on your capital and that is a large profit, I do not agree with you.

30,721. I am not speaking whether it is large or small, I am merely calling your attention and putting the question to you whether they are carrying on their business at a loss?—No, they are not carrying on their business at a loss.

Profits of railways and breweries

30,722. Are brewers carrying on the business at a loss—a very large industry?—Many have done so.

30,723. Are our leading railways carrying on their business at a loss—a very large industry again?—No, the leading railways are certainly carrying on their business at a profit.

30,724. I need not go through and enumerate the different businesses of the country, but is it not the case that a very large amount of business as we see

Mr. C. Hoare.
12 July 1894.

from the income tax returns is being carried on at a profit and not at a loss?—That must be so, but I should imagine that the main payers of the income tax are people with fixed incomes; and if you take the railways you see the main portion of the railway capital is preference and debenture stocks. It is only the people who own ordinary stocks who are the traders of the concern.

30,725. Still the preference and debenture stocks are a mode of dividing the profits which the whole undertaking earns?—Yes.

30,726. I am speaking with reference to the question whether the working man does have an adequate share of the cake or not; and I should like to put the further question whether the reduction of money wages which has been anticipated has not been very long in coming, and whether we may not now entertain a doubt whether it will come at all?—Anything in the future is doubtful; I do not see what I can say more.

Rise in prices and rise in wages: effect on agriculture.

30,727. At any rate you do not want a rise of prices with a proportionate advance in the money wages of the working man?—You say I do not personally wish it?

30,728. I am speaking of what you are proposing here—what it is you wish to do?—I say, the working people would be in favour of a rise of prices, because experience has taught them that rising prices always give them the best chance of a rise in wages. I cannot say anything different.

30,729. Then the further question I would like to put is, that if you have a rise of prices and a rise of wages at the same time, and rise of prices not confined exclusively to agricultural produce, what benefit is agriculture to get in the long run from the change?—Because the fixed charges which are a very important item would become lighter, and the burden of debt would be more easily borne.

30,730. Then it is only with reference to that question of fixed charges that that is a proceeding by which you say that the agricultural interest at this moment would benefit?—What do you call the fixed charges, do you call his rent a fixed charge?

30,731. I am using your own phrase. What you propose is an immediate benefit to the existing class of agriculturists of some kind or other?—I should say that the agricultural labourers would gain, because they would obtain more regular employment, and more of them would be employed, too; because we should be able to grow crops again which we cannot grow now.

30,732. Is that so; if wages and all other prices increased, would you be in a better position to grow crops at all?—Yes, because wages, I imagine, are not more than half the cost of production.

30,733. But all other prices as well. What benefit is agriculture to get from a mere change in the denomination of things?—If you give me an instance perhaps I might answer it. You ask such general questions.

30,734. Necessarily what you propose is a monetary change; that is to say, you propose, if I might use the phrase, to adulterate the currency, and give us 150 sovereigns where 100 were before, or something of that kind, and prices and everything to go up proportionately; and the question I am putting is, whether anybody would really be the better off for the change, except that those who are now creditors would lose something, and those who are now debtors would gain something?—And the other way is, as I said before, that the workman would be better employed and this country would be able to grow crops which it cannot grow now.

30,735. Is there much room for better employment of working men, one year with another, in this country?—We find the tendency is to lay down land to grass, which means diminished employment.

30,736. That is only the particular industry of agriculture, not the whole industry of the country?—One only hears that there is a tendency for the cotton business to go to India and Japan.

30,737. Might that not be due to a great variety of causes, and not specially to any currency change?—I thought it was due to the fact of labour being paid in India in depreciated silver.

30,738. Still, that is not a subject that you have specially investigated, that you can speak upon?—Only generally.

30,739. You speak of the employment of silver for currency as having been erroneously curtailed, but I think we have had evidence here, and Professor Foxwell admitted, that there has been actually no diminution of the employment of silver of late years; but you are not able to go into the facts?—No; I only go upon the general idea that Belgium and Germany and Austria and Italy and the United States, and so on, have adopted a gold currency, and therefore there is a less demand for silver.

Mr. C. Hoare.
12 July 1894.

Employment of silver for currency.

30,740. As a matter of fact the United States has purchased and made use, in some form or another, of an enormous quantity of silver during the last 20 years?—Yes, and we saw what was the effect in the immediate rise of prices.

30,741. I am not quite sure what you mean?—We saw what was the effect in the United States, and here also.

30,742. The purchases of silver I speak of have been going on since 1878?—Were they not increased by a particular Act?

30,743. There was a momentary speculation in 1890, but the purchases of silver by the United States have been going on for a great many years. My question was merely to the question of fact. You say the use of silver in currency has been enormously curtailed, and I wish to ask what particular facts that opinion was based upon?—The demonetisation of silver by Germany particularly.

30,744. But Germany, in fact, did not part with any great amount of silver?—Then the popular idea is wrong.

30,745. And every other country, I believe, has increased its consumption of silver in some form or another?—Yes, I should naturally expect so.

30,746. I should think, if my recollection is right, Professor Foxwell, when he was here, merely insisted upon the one thing, that by the change in France in 1873 a field for the employment of silver was taken away which might have existed; that was all he said. But you have not gone into the facts?—No more than I say, and that appears to be inaccurate.

Position of silver as legal tender.

30,747. (*Mr. Everett.*) In regard to silver, if the use of it has not largely diminished, which, I believe, facts show to be the case, the legal position of silver as a full legal tender metal is altered very much, is it not?—That is as I understand, in Germany and Belgium and in France.

30,748. Many countries which recognised silver as full legal tender have, during the last 20 years, ceased so to recognise it; that is the case, is it not?—That I believe to be the case.

30,749. And they have also in doing that closed their mints to the free coinage of silver?—Yes.

Free trade and free mints.

30,750. You told the Chairman that you were entirely in favour of free trade, and I gather from the evidence you have given on the monetary question that you are also in favour of free mints for the two precious metals?—Yes, if we could get an agreement with the civilized powers.

30,751. Would it not look to be a necessary concomitant to free and uninterrupted trade between countries using both the precious metals that there should be the free and equal use of the two precious metals, as well as free ports and interchange of commodities?—One would naturally suppose it would be an enormous advantage.

Effect of fall in prices on capital and labour.

30,752. Then your evidence leads us to the idea that the present condition of things is tending towards the ruin of employers, that a great deal of the producing business is being carried on now with very inadequate profit, or with no profit at all?—Yes, not only to the capitalist but I believe it has a very bad effect on the employés.

30,753. That was the question I was just coming to. As I understand, your contention is that the workmen cannot permanently benefit by the ruin of their employers?—It seems to me obvious.

30,754. They have, according to the facts testified before us—those of them who are in employment derived a certain amount of benefit from the change of things up to the present?—I think they have derived a great benefit up to the present time.

30,755-6. But your judgment is that that has been at the expense of capital, and is not likely to be continued?—Yes, I believe it has been at the expense of

Mr. C. Hoare. 12 July 1894.

capital, because farmers have not kept proper balance sheets, and so have not appreciated their loss. If they kept proper balance sheets and really took stock they would find not only that they were getting no profits but that they had lost a very large proportion of their capital in paying wages and other outgoings necessary to carry on their business during the last few years.

30,757. I see in the brief you put in you consider that the failure of banks in Australia was largely connected with the depreciation in the value of produce and land in the Colonies?—Yes.

30,758. And you apprehend a danger of a similar crisis in England if this continued fall in prices goes on?—I think it is certain.

Depreciation in value of real property.

30,759. Has there not been already an enormous depreciation in the value of real property in this country, farms and mills?—Of all kinds.

30,760. Would you imagine that that would run up to hundreds of millions in estimating the amount of depreciation as compared with 20 years ago?—I should imagine so, but I do not know what the fixed capital invested in these things is. Take farms which were worth 50*l.* an acre; now they are worth merely a nominal sum; in many cases they cannot be sold at any price.

30,761. Does not the same state of things apply to iron works and cotton mills also, largely?—I asked a gentleman once whether it was an exaggerated statement to say that, taking an instance of a man with 100,000*l.* capital, invested in his mill, plant, and machinery, who was earning at one time 20,000*l.* a year, and who wanted to extend his business, and borrowed 50,000*l.* at 5 per cent., the security of the lender being 150,000*l.*, the borrower would probably now be making no profits at all, and the security of the man who lent the 50,000*l.* would be little better than a white elephant. He says that as regards many cotton industries that was not a bit an exaggerated statement. So that what looked to be a capital and first-class investment has now turned out to be almost valueless. The tendency seems to me to be, as Mr. Mundsley has pointed out, that capital which is now employed in England employing English workmen, will be shifted to Bombay and other places in India and Japan and China, where the labourer is paid in silver, thus reducing the cost of production by one half. I view with very serious alarm the future of many industries of this country. Places that have been flourishing towns, with workmen well employed, and industry active, if this appreciation of gold continues, will become a wilderness. Take the three great industries I know something about—agriculture, cotton, and iron; all alike are suffering. For instance, the Barrow Hematite Steel Company at one time was the most prosperous thing going. It has not paid any dividends on its ordinary shares for years; its capital has been written down 25 per cent. If we take the Low Moor Iron Company, one of the best things in Yorkshire, it has paid no dividend at all, and shows a loss on its working.

30,762. (*Sir Nigel Kingscote.*) Was this all due to the appreciation of gold?—To the gold cost of production.

30,763. (*Mr. Everett.*) As I understood you, the value of what they turn out continually falls owing to the appreciation of gold, and the workmen are not willing to have their wages reduced proportionately so as to allow the industry to be carried on to pay?—Yes. Producers at home with their outgoings paid on an appreciating gold basis, have now to compete with producers abroad, whose outgoings are paid on a depreciated silver or paper basis, with the result that the former would have to accept the lower price that would give a profit to the latter.

Profits of breweries and railways.

30,764. With regard to the two commercial interests which Mr. Giffen questioned you about, railways and brewers, is it not the fact with respect to brewers, that owing to our licensing system, to tied houses, and to the other arrangements connected with the trade, that is a special industry?—Yes, by the operation of the licensing system it is made into a monopoly.

30,765. With regard to railways I understood you to say that it was the producing industries that were suffering by the appreciation of gold, but railways are not producing industries?—I wished to say that the producing industries were particularly suffering. I think I should have liked to have said that.

Mr. C. Hoare. 12 July 1894.

Legislation and prices.

30,766. The chairman asked you a question about whether you wished to raise prices artificially. I should like to ask you whether you do not think it is quite as hurtful to an industrious country to depreciate prices artificially as to take steps to raise them?—I think it is worse for the country to have prices artificially depreciated, as I consider they now are, owing to the appreciation of gold; it is the worst of the two evils, I think it is better to have constant prices and regular prices.

30,767. And it would be your view that the present appreciation of gold, has largely been brought about by legislation; that is by artificial means?—Yes; and what I think is particularly important as regards the currency question affecting agriculture is the increasing burden of debt. All traders if they are carrying on a prosperous business seek to extend their business with borrowed money. When they can carry on their business at a profit, the more money they can borrow, with reasonableness, giving proper security, the better, and many farmers did that in former days. They have now got the same amount of debt, and they have got about half the amount of assets to meet it with. The result is, through legislation, I consider that they are more or less ruined.

Railways as producing industries.

30,768. (*Mr. Giffen.*) Am I to understand that it is your opinion that a railway does not produce?—A railway is a common carrier, is it not?

30,769. Does it not, in the form of carrying, conduct a useful service to the community?—Would you call a shipper a producer?

30,770. I am speaking in the economic sense of the words; does not a railway produce something useful to the community?—I should say it was a distributor or common carrier.

30,771. What is the difference between the owner of a mine who brings up coal from under the service of the ground to the surface, and the railway which carries the coal from the pit's mouth to the place where it is consumed. What is the difference in the nature of the services rendered by the mine and by the railway company?—They seem a good deal the same, and perhaps you have noticed that there is a very great agitation from agriculturists and mine owners against the railways and their rates, and if they are successful, do you think the railways will then carry on their business at a profit?

30,772. Then, in the sense in which we are now using the words, the railway, although you call it a carrying industry, is also a producing industry, is that so?—I stick to it, it is a carrier, a common carrier as termed by the Act.

The commercial community and bimetallism.

30,773. (*Mr. Dalton.*) Do you think that the great majority of the commercial community are in favour of bimetallism?—I think the numbers in favour of it are growing day by day.

30,774. I want to know, do you think the majority are in favour of it, because I understood you to say that it is the persons with fixed incomes who are against it, and not the commercial community themselves; do you think the majority of the commercial community are against it at the present time?—You see that is a very general question, and I have not polled them.

30,775. Take most business men?—Business men, I say, are daily and weekly becoming converts to the idea; they dislike the appreciation of debts and they dislike the idea of England losing its trade owing to the competition of silver standard countries.

Stability of prices.

30,776. (*Sir Nigel Kingscote.*) I think, in answer to Mr. Everett, you said what you would like to see would be a constant price, as I take it in the sense of a non-fluctuating price; but how are you going to arrive at that?—Of course prices do fluctuate a great deal.

30,777. Yes; but is it not a case of supply and demand very often that regulates prices; how are you to have a constant non-fluctuating price?—Of course, if you have a gold standard of value, it seems to me that prices are more likely to vary than if you have gold and silver in conjunction, because the proportion between the volume of the two metals and of all other commodities would vary less. If you say that gold alone is to commodities as 100 to 1,000, but gold and silver

Mr. C. Hoare. 12 July 1894.

together as 140 to 1,000, the proportion between a larger sum like 140 and commodities represented by 1,000 is less liable to fluctuate than that between 100 and 1,000.

30,778. You would have to keep your gold and silver equal in value, would you not?—We think with free mints and free coinage the ratio would be maintained as it was in years gone by.

Mr. C. Hoare. 12 July 1894.

The witness withdrew.

Adjourned to to-morrow at 12 o'clock.

Fifty-third Day.

Friday, 13th July, 1894.

PRESENT:

The Right Hon. GEORGE JOHN SHAW-LEFEVRE, M.P., in the Chair.

Viscount Cobham.
The Right Hon. Henry Chaplin, M.P.
Sir Robert Nigel Fitzhardinge Kingscote, K.C.B.
Robert Giffen, Esq., C.B.
Charles Isaac Elton, Esq., Q.C.
Captain Owen Thomas.
Cornelius Neale Dalton, Esq., C.B.
Robert Lacey Everett, Esq., M.P.
John Gilmour, Esq.
George Lambert, Esq., M.P.
William Cutlack Little, Esq.
Charles Whitehead, Esq., F.L.S.

Herbert Lyon, Esq., *Secretary.*
R. F. Crawford, Esq., *Assistant Secretary.*

Mr. W. M. Acworth. 13 July 1894.

Mr. William Mitchell Acworth called and examined.

Mr. W. M. Acworth. 13 July 1894.

30,779. (*Chairman.*) I believe you are a barrister practising before the Parliamentary Committees, and that you have made a special study of railway questions?—Yes.

30,780. I think you gave evidence before the Railway Rates Committee?—I did.

30,781. I think you are at present acting as the Secretary to the English section of the Permanent Commission of the International Railway Congress, which, at its meeting in London in 1895, is to discuss the question: "In the case of light railways, what "regulations can be made by the government in its "normal requirements for constructing and working "without risking the public safety"?—Yes.

Light railways for agricultural produce.

30,782. Have you formed an opinion as to the importance of light railways for the agricultural interest and for the extension of the system into rural districts?—Without speaking in any way as an authority on agriculture, I can conceive no circumstances which would prevent light railways being in England the advantage to agricultural interests that they confessedly are on the Continent.

30,783. Can you state from your own experience that the extension of the light railways has been considered of very great importance to the agricultural interest on the Continent?—I think there is no question of that. Practically every country in Europe at the present moment, with the exception of England, is doing all it can to develop light railways, and it is commonly put that it is specially for the benefit of agriculture that this is done. I have here an extract from a letter sent by the Belgian Minister of Agriculture and Public Works to the Governors of the various provinces of the kingdom, enclosing a circular issued by the National Light Railway Society. That society is nominally a private company, but practically it is entirely controlled by the Belgian Government. It is called a society, and it is formed, I imagine, under what would correspond to a Private Act of Parliament, but for practical purposes it is entirely under the control of the Government. The Minister forwards a circular from them, and this is a part of his covering letter:—"I beg to direct your "special attention to the exceptional importance of the "work that the National Society is charged to conduct "to a successful end, and to the great services which "it can render to the country. The society comes, at "the precise moment in the middle of the serious crisis "which weighs upon agriculture, industry, and "commerce, in a word, on all the sources of the "prosperity and wealth of the nation. It will be able "to contribute largely to diminish the intensity of the "crisis, if it is well understood, and wisely made use "of. The Government will do everything in its power "to encourage the construction of these new methods "of communication." The date of that, I should say, is September 1885. Then the circular of the Light Railway Society which is covered by that letter is a long circular, but the point that is germane at the present moment is this: "For years past the spirit of "enterprise and progress has directed itself almost "exclusively to the extension and improvement of "main lines of railway. It is true that the number "of roads and canals has been increased, and that "their construction has been improved, but there have "been no changes, or almost none, in the manner in "which traffic is conducted on these lines of com-"munication. Old-fashioned waggons continue to "travel on the high roads, and whereas the price of "carriage for long distances has enormously decreased, "it costs as much, if not more, than it did half a "century back to cart a load of wheat. It is the "function of light railways to improve this state of "things. Constructed, as a general rule, on the "existing roads"—that is, of course, speaking of the Belgian practice only—"and in consequence, more "economically than main railway lines, operated with "the utmost economy and by means of cheap rolling "stock, they will furnish the people with the means of "transporting their products at the lowest possible "price. By means of their junctions with the main "railway lines, they will render access to them more "convenient, both for passengers and for goods. They "will assist communication from village to village, "and from the village to the adjacent station. They "will call into being new industries, and increase the "prosperity of existing industries by affording them "new outlets for their products. Finally, they will "enable the farmer to procure at a cheap rate the "fertilisers necessary to enable him to face foreign "competition, and by the low cost of carriage will open "to him the markets of his own country as well as "those abroad. For many places deprived, as it "seemed, for all time of railway communication, these "light railways will furnish an opportunity unhoped "for, and possibly the last, of escaping from their "fatal position of isolation." I think that fairly puts the case.

Mr. W. M. Acworth.
13 July 1894.

30,784. That fairly puts the argument from the agricultural point of view in favour of light railways?—That puts what I should think might fairly be said to be the accepted view of authorities in foreign countries. I might perhaps supplement that by a statement which was made about 2½ years ago by the Prussian Minister of Public Works. On moving the third reading of the Light Railway Law (Kleinbahnen-Gesetz) in the Prussian Parliament in the Session of 1892 he used these words:—"Elsewhere the construction and working of similar light railways have proved a blessing to the country. A traveller to-day through North Italy, through Belgium, and through Holland can satisfy himself what a blessing these light railways have been. It is as though irrigation canals had been carried through the fields, and everything was growing and flourishing under their fertilizing streams. In North Italy, in particular, the blessing which they bring with them is so obvious that even the casual tourist can hardly fail to notice it." Of course that can only be spoken of an agricultural district; in Lombardy it is not a question of mineral products or anything of that kind, but is purely one of agriculture.

30,785. Can you state that almost everywhere throughout Europe there has been a movement in this direction, and that light railways have been promoted and fostered by various Governments?—There is no question that the English is the only Government in Europe which has not actually spent out-of-pocket money in encouraging light railways, which—apart from the further question of giving facilities for their construction—has not actually invested capital in them.

30,786. Is it the same case with France?—France has invested a very large capital in them.

Light railways in France.

30,787. Is that on the part of the State or through societies?—The money is mainly found by the State. A part of it is found usually by the departments, but the bulk of it is, I think, always found by the State, and then the lines are handed over to companies to work.

30,788. You said partly by the departments; are contributions made by the departmental authorities?—I think it is always the Conseil Général of the department that votes the money; I think so.

30,789. Then the capital has not been provided by private associations, but the light railways, when constructed, have been leased or hired by associations; is that so?—There have been various stages of the French arrangements, but as a rule the *entrepreneur*—the individual or company, that is, which undertakes to work the line—usually finds a certain sum per kilometre of line—I imagine not much more on an average than is sufficient to equip the line with rolling stock, but he is generally required to find something. Undoubtedly, it would be correct to say the bulk of the capital has been found by the public authorities.

30,790. Is it the case generally in the other States that you have mentioned, that the bulk of the capital has been found partly by the Governments and partly by the local authorities?—In Holland, I believe the great bulk of the money is found by private enterprise, but I think that is the only country. In Belgium, for instance, the State and the province each find about 28 per cent., or something of that kind; that would make 56 or 55 per cent.; another 40 per cent., on the average, is found by the communes directly affected by the line, and something like 5 per cent. is contributed by private persons.

30,791. Then these various Governments have found it expedient to make large contributions without any prospect of return, I presume, in the shape of interest on their money?—I do not know that it would be quite fair to say that. They have not got much in many places. France has got almost no return on its capital, but the Belgian Light Railway Society, of which, as I say, the bulk of the capital is found by the State, is at present paying something like 3 per cent. I believe—it is very near 3 per cent. When you say "Government," Government, of course, will be understood in the broader sense to mean not necessarily the National Government, but the public authorities.

Nature of working light railways.

30,792. Including the local authorities. Will you explain what is the nature of these light railways; how far they are actually extensions of the existing main lines, or whether they are wholly dissociated from the existing main lines?—I think the great bulk of them have a connection; that is to say, run into a main line station.

30,793. Are they of the same gauge as the main lines?—You cannot generalise on that point. In Belgium and Holland I think, as a rule, they are almost always metre gauge. Undoubtedly the tendency of foreign engineers is to go for the narrow gauge.

Mr. W. M. Acworth.
13 July 1894.

30,794. That is to say, a narrower gauge than the main lines?—Yes.

30,795. In spite of the necessity that would follow of trans-shipment?—Yes. Of course if one were asked to apply that to England, you would have to remember that, in the first place, labour is more expensive here, and therefore trans-shipment costs more; and, in the second place, all our English ideas are conceived on the basis of great speed, and the question of breaking bulk affects speed more than almost anything. So there is no doubt the English opinion is almost universally against the break of gauge, but the Continent has certainly gone the other way.

30,796. Are they worked always by steam, or are they worked sometimes by horse-power?—I do not know anything would be called a railway which was not worked by mechanical power. Of course electricity is coming in.

30,797. In the case of France, are these light railways of a different gauge generally?—I do not think I can speak at all as to what the prevalent practice in France is. I would not like to say on which side the average lay. There is no doubt there are many of both kinds.

Light railways in the United States.

30,798. What is the case in the United States?—It is hardly possible to answer the question as to the United States for this reason: that practically everybody there makes a railway up to the standard that he thinks proper. You have no Government regulation, and therefore there is no necessity to conform to a certain standard; you lay a railway down along the grass, and the question is not raised of whether it has reached A standard, or B standard, or C standard. They are always of the normal gauge.

30,799. Always of the normal gauge?—Practically.

30,800. Is that by law or by the general concurrence of opinion, because you said just now that everybody was allowed to make what kind of railway he thought fit?—It is the result of the experience of the public and the engineering profession. No one now thinks of making a railway of any except normal gauge. Of course the Commission will know that in early days there were various gauges. The Denver and Rio Grande was made originally on a narrow gauge. The Grand Trunk, on the other hand, was made on the broad gauge, but all the important railways have now been brought to normal gauge, and I think a proposal to make a narrow gauge line, except under quite special circumstances, in America would be scouted.

30,801. Are they made on the roads, or by the side of the roads, in the United States?—Practically, all over the country, every railway there crosses roads in all directions. I mean crosses them on the level; the main line of the North-Western, for instance, would run across the streets of Stafford if it were in America.

30,802. But you would hardly take your illustrations from America?—No, I think not.

30,803. Now reverting again to the Continent, are these light railways made on the roads, or by the side of the roads?—Might I describe, for example, a Belgian railway?

Light railways in Belgium.

30,804. Yes, if you please?—I have here a map, with a timetable annexed, showing all the light railways in Belgium. I think it will show the extent to which the system has been carried (*handing in map*). You will see how they are spread in all parts of the country. The ordinary railways are shown there by light lines, and you will see how there are ganglia of light railways round various points.

30,805. Are these thin lines the main lines, and those black ones the light railways?—The thin lines are the normal lines—the main arteries of the country; the black lines are those belonging to the National Society for Light Railways, whose timetables are given on this sheet.

30,806. Do these constitute the whole of the light railways in Belgium, or is this a map of only one light railway?—They all belong to the same society, I think; as far as I know, that shows all the light railways in Belgium.

Mr. W. M. Acworth. 13 July 1894.

30,807. (*Mr. Little.*) The National Society has a monopoly, has it not?—The legal position is that they have the refusal of a line. If a line is sanctioned and they refuse to take it up, then it is possible for other persons to proceed with its construction and subsequently to open and work it, but they always have the refusal first.

30,808. (*Chairman.*) This map that you have laid before us hardly bears out, I think, your statement as to the great extension of the system in rural districts. These black lines seem to be in the main connections from the principal towns with the immediate country districts round them, more like tramway lines, something rather in that direction; they do not seem to me to go from the country stations into the rural districts immediately adjoining them; perhaps, I may be wrong in that, but if one were to look generally at the map one would say that, I think. The map given in the Consular Reports shows that rather better; on that map they would seem to be mainly running out from towns like Brussels, Antwerp, and Charleroi?—There are a very large number of them in Western Flanders. Here is, for instance, Ostend to Blankenberghe along the coast and down south to Nieuport, Furnes, and Ypres. All these are purely agricultural districts; it is a very populous wealthy agricultural district undoubtedly.

30,809. (*Mr. Elton.*) Ostend is a sea-bathing place, and people would go from Blankenberghe to Ostend for pleasure perhaps?—That would be so.

30,810. (*Chairman.*) It would seem to me on the first look of the thing that these railways run mainly from the larger centres of population into the districts immediately adjoining them rather than being a means of communication between the purely rural districts and the stations on the main railway lines, so to speak; however, you say there are a considerable number of communications with purely rural districts?—I should have said that a typical corresponding instance would be found if you carried lines up the Yorkshire Dales, up beyond Richmond and places like that, which are the local market towns; or if you had similar lines in the Devonshire valleys.

30,811. Would an extension of railways in Essex and Suffolk—purely rural districts—correspond with what has been done in Belgium?—I think so; if the line came into the local market town along what probably would be the main turnpike road. That would be my idea of the correspondence.

30,812. Now, as regards the formation of these light railways along the roads; what have you to tell us?—I will take Belgium, with the understanding that from the fact that Belgium and Holland is very flat country, and that practically all the roads consist of a paved centre with wide places on each side, where it is very convenient to lay a railway, and that accordingly their light railways are mostly laid along the main roads. I do not think that would be true of other countries. With that proviso I think a description of Belgium would be fair as a description for any of them. With respect to gauge I have already said that I do not think you can lay down any general rule, but there is no doubt that the general continental tendency is in the direction of a narrower gauge.

30,813. Am I to understand that in Belgium these light railways are mainly laid on the sides of the roads?—The Belgian arrangement, wherever I have seen it, is this: supposing a road goes round, or the road is too narrow, they will cut off the corner by buying land of their own, but as a rule you have a road which is perhaps 50 feet wide, and in the middle of it there is a bricked space, 20 feet wide or 30 feet wide—20 feet wide probably—on which the ordinary traffic works, and on both sides of that there are wide spaces, and on one of these the railway, which, of course is only a single line, is put in; sometimes it is raised an inch or two above the road level as it were, and sometimes it is quite on a level. That is where you are in the country. When you come into a town or into a village they simply go down the main street without any hesitation or consideration. They run in many instances within 18 inches or 2 feet of a front door. In one place in particular, at a town with some 4,000 people—quite a considerable town, Furnes—the town was here and the railway station there (illustrating). There was a main line passing through, and the local line had to go off from it in this direction; instead of starting from the main line station here, the light railway quite deliberately started there; it made a circuit in order to go through the heart of the market place, passed the front door of the Town Hall, came down the main street again, and then it set off on its journey in this direction. This being a train of an engine and four or five coaches—tramcars rather—it was deliberately carried right through the middle of the town, past the front door of the Town Hall.

Mr. W. M. Acworth. 13 July 1894.

30,814. I suppose in that case the rails were laid like the tramway rails, level with the road, so as not to be an obstruction to the other traffic?—I think, if they had existed in England, every local authority along the line would have said they were an obstruction. They certainly were not the complicated double grooved rails that we have for tramways here. The Company are bound, of course, by law not to leave their rails to be an obstruction, but the authorities are evidently very much more lenient than they would be here.

30,815. Then I gather from that that public opinion is very favourable to that, and would stand a good deal in the way of obstruction, which they perhaps might not do here?—They quite appreciate that this railway is better than none, and that this is the only class of railway they can possibly get. Then signals practically do not exist; there may be a rudimentary arm put up by a man on the ground at the moment a train is approaching, but anything of the nature of interlocking signals and signal boxes, such as is thought essential here, they have never heard of.

Speed of Belgian light railways.

30,816. Then with regard to pace, is there any regulation as to speed?—If I give the Belgian speed, it will, I think, be as low as any, because, as I say, their lines are mainly on the public roads, and they get higher speeds elsewhere. The Belgian regulations are 18 miles an hour on the road, six miles an hour in passing through a town, and three miles an hour in passing over the moveable bridges on the canals and the rivers. Of course I need hardly say that, as you are on the road to start with, in crossing a road you have no expenditure for making bridges over or anything of that kind. You have no gates with gatekeepers to watch them and interlocked with a signal box some distance off, or anything of that kind; you merely cross the road as if it were a tramcar passing along the head of the street.

Purchase of land for light railways.

30,817. I think you said just now that occasionally they had to buy land for the purpose of making the line; I suppose that is where the road is very narrow, and it is necessary to enlarge it. Are there any special facilities given for the purchase of land under those conditions?—I am not sure that I can answer the question off-hand as to Belgium.

30,818. Perhaps you can supply the information?—Certainly. I have no doubt I have it. I find the fact to be that the *Société Nationale* is given "where "necessary, authority to exercise compulsory powers "in conformity with the laws dealing with expropria-"tion for public uses." What the procedure under these laws is I cannot say.

30,819. Of course in this country the purchase of any land under the existing law compulsorily would be a very difficult operation?—Yes.

30,820. One would especially desire to know whether any special facilities are given by the Governments like the Government of Belgium for the purpose of acquiring the bits of land which may be necessary to facilitate the laying of these lines?—I do not know of any. I do know that in the case of the French light railways, which are mostly not on the roads, they say that one of the reasons for their great cost is that the local authorities have a right of veto, and can refuse to allow the line to be made unless they approve of it; and I know also that in France, where, as I have said, they are not laid on the roads much, one of the main causes of the expense of these light railways is said to have been that the peasants acting as jurymen award each other fancy compensation at the expense of the general Government.

30,821. You said just now that in France these railways are for the most part not laid along the roads?—That is so, to the best of my knowledge.

30,822. In that case they have to buy land for the purpose?—Yes.

30,823. With the necessity of compensation for the purchase of land and probably for severance too?—Yes; of course it being always remembered that they pay undoubtedly high in France, as I gather. But

r. W. M. cworth. July 1894.

then it is always to be remembered that if the public opinion of the neighbourhood be very strongly in favour of the railway—as I think it is in the case of light railways—it tends to keep down the standard of compensation.

30,824. In spite of that, these juries of peasant proprietors sometimes award themselves fancy compensation, you say?—I have seen that stated in France, but I have not seen it stated of other countries. I should like, if you ask for information on that, to be allowed to supply it later.

st of nstruction light ilways.

30,825. Can you give any information as to the cost of the lines?—May I just continue on the point of the method of construction? I think there is one further point, which is the question of stations. Of course the Commission will remember that platforms are unknown in any other country in the world; practically, a platform means a thing about the height of the pavement anywhere else, and even that does not exist on these light railways. The station consists of a notice outside a public-house very often, or outside a little house on the roadside that this is a station of the train, or a station of the railway as they may happen to call it, and you will sometimes see a little glass apron put up with a bench underneath, and there the people sit and wait for the train. There is no expense whatever incurred for station or station staff of any kind. It is possible that the keeper of the public-house may be paid some fractional sum, some perfectly trifling weekly sum for giving notice of the approach of the trains, and that kind of thing, but there is practically no expenditure for station or station staff.

30,826. How are the tickets given out?—At terminal stations very often there is a ticket office, but I think the guard always issues tickets on the train; I think they always are obtainable on the train.

Working of ight rail- ways in Belgium.

30,827. (*Viscount Cobham.*) Do the trains only stop at the stations, or do they pick up traffic at any point?—You will find a good many sidings. As a rule the Belgian people work a passenger service, and they only stop at fixed stations; they do not stop at intermediate points; but going along the line you will constantly see sidings laid in. They work a goods train through morning or evening, or something of that kind, and then they no doubt pick up. I do not know whether your lordship was meaning actual loading on the rails.

30,828. They would not do that?—I have never seen that happen.

30,829. They do not pick up traffic at places other than sidings or stations?—That is so.

30,830. (*Chairman.*) In purely rural districts how often do they run the trains?—I should think seven times a day would be something like the average, which, of course, is a very much better service than is given on many of the ordinary railways in England in the agricultural districts.

30,831. Is there one line of railway?—Always, I think.

30,832. Only one?—I never saw anything but one.

30,853. (*Viscount Cobham.*) With that good service of trains they must rely mainly on passengers; for agricultural produce would not require such a service as that?—That is so. Of course they do get a good many passengers, and they can afford to work at a very cheap rate. By keeping down their expenses in every direction they work at a rate per mile of which we have no conception here. They can afford to run a train comfortably, you may say, for 7*d.* or 8*d.* a mile.

30,834. (*Mr. Gilmour.*) Is that seven trains each way?—Yes: I think you will find that is something like the average.

30,835. (*Viscount Cobham.*) Between five and seven, is it not; there are a good many with only five, I think?—Yes; and, on the other hand, there are many with more. To continue with the method of working. The Belgian railways in no case seem to have continuous brakes. I have heard it said that they are desirable, but they are not apparently found necessary; so that you have these trains running along the road at 18 miles an hour, without a continuous brake, and without any signals.

30,836. (*Mr. Dalton.*) Do they run at night, or by day only?—Yes, they run by night. I do not mean a night service, of course; but they must run after dark. Then about mixed trains, which of course has been a question here very much. Practically they always take perishable produce if it is offered on the passenger trains; and there is no objection made whatever to mixed trains. You may say that all over Europe in the country districts there is no objection whatever taken to mixed trains. Anything like the Board of Trade objections here on the Highland and Cambrian could not exist in any other country; in a country, for instance, like Hungary, which corresponds with Wales in that respect, the trains are nearly all mixed. If there is any exception it would be one express train a day; but the normal idea is that a train will be mixed. They always make arrangements by which the staff can go through the train so that the tickets may be collected, and the thing may be controlled *en route*.

30,837. (*Viscount Cobham.*) They have no staff except at terminal stations, have they?—You will sometimes find a man at an important intermediate point, say, for example, if the light railway makes an intermediate connexion with a main line, or if it crosses swing bridges over waterways on which there is much barge traffic, but as a rule there is no staff.

30,838. Except the travelling staff?—There is no staff except the travelling staff, and that is kept down to the lowest possible point. In Holland they often do without a fireman, there is nobody but a driver on the engine, and there is one conductor. I heard within the last few days from a German official that they have got some light railways in the Island of Rügen, and they have gone so far that they have dispensed with everybody except the driver and the fireman. The driver collects the tickets, and they find it works quite satisfactorily.

30,839. Still, they have two men there?—No doubt they have a second man on the engine. They have dispensed with the guard. The objection, of course, to leaving out a fireman is, that supposing the driver dropped off, or anything happened to him, there would then be no one to take his place, so they always have an arrangement by which, if they abandon the fireman, then the guard can get on to the engine whilst it is travelling, if necessary.

30,840. (*Mr. Whitehead.*) Who puts in and takes out the goods at the various stations, the fruit produce, &c.?—No doubt the train staff help the man who brings it down, that is what it comes to; they either find a truck ready loaded for them on a siding, which they pick up, or, if the man is there with his cart, the man with the cart and the men with the train do the work between them.

30,841. (*Chairman.*) Is there any arrangement for the transfer of the trucks to the main line by an alteration of the wheels?—A good deal of attention has been directed lately to some of the Saxon lines which are said to do that very successfully. They have an arrangement by which you can mount a broad gauge truck on a cradle running on narrow gauge wheels, and in that way they send the broad gauge trucks down the narrow gauge line, but I think, certainly, the common arrangement is that the load is transhipped.

30,842. Take, for instance, the conveyance of coal, which would be very important for some districts. If there is no arrangement of that kind it would necessitate transhipment?—Yes, undoubtedly, it would be shot from a higher level to a lower level as it is of course coming out of a colliery into the ordinary trucks now. It would be the same process reversed.

30,843. (*Viscount Cobham.*) What is the usual weight of the truck load?—The Belgian ones hold as much as ours; they are very long and very wide for their gauge, they overhang, I mean to say, a great deal more than ours do, and they hold 10 kilometric tons.

30,844. (*Chairman.*) I suppose these trains stop at every village?—They seem to stop everywhere where there is any chance of traffic. At what looks like a cross road, or some important crossing, you may be pretty sure to see put up a signboard, "Railway stops."

30,845. Would they stop at a farm-house on the way for the purpose of taking the produce or no?—I think not in the case of a passenger train.

30,846. I thought you said the trains were mixed—passenger and goods?—Yes; but I think if a man wanted to send his basket of eggs he would have to

Mr. W. M. Acworth.

13 July 1894.

carry it to the nearest stopping place; that is my impression.

Cost of construction of light railways.

30,847. Then, with regard to the cost, what have you to say?—I should think if you were to generalise all Europe you would probably arrive at something like 4,000*l.* a mile, certainly under 5,000*l.*, I think.

30,848. Is it much less where they make them along the road?—That is rather a difficult question to answer.

30,849. (*Viscount Cobham.*) Do you know the cost in Belgium?—I think I have it here.

30,850. (*Chairman.*) Of course it must make a considerable difference whether they have to buy the land or not?—I think a great deal of land must be either given, or given on very favourable terms. Of course, the whole of public opinion is "let us get the line," and I think everybody is inclined to help it. I think that has to be borne in mind.

30,851. (*Mr. Dalton.*) Is the 4,000*l.* merely for the laying of the line, or does it include the stock as well?—It is including the stock. I have it here on the authority of Rölls' "Railway Encyclopedia," which endeavours to summarise the thing, that a line of local railway of normal gauge costs 4,400*l.*, including rolling stock. If you bring that down to the narrow guage the continental engineers say they can make it from 20 to 25 per cent. cheaper. Of course, English engineers would say you could not make it any cheaper to the same standard.

30,852. (*Viscount Cobham.*) I should think it must be lower than that in Belgium, where they have a level country, and run entirely upon existing roads?—I think so, undoubtedly. I see my note here is that if the railway be built as a tramway, running alongside the road, the figures can be brought down to not much more than half. I think you may safely say the Belgian ones are under 3,000*l.* a mile.

30,853. (*Chairman.*) I think in France, besides these light railways, there are correspondences with every village, are there not? There are a kind of coaches or conveyances maintained by the departments in connexion with almost every village; is that not so?—Are you speaking of conveyances other than railways altogether?

30,854. (*Mr. Lambert.*) The diligence?—It would be the diligence practically, or something of that kind, would it not?

30,855. (*Chairman.*) Yes, promoted by the State?—I always thought those were subsidised for the mails, but I do not know. They certainly do exist; one knows that.

Light railways in Germany.

30,856. As regards light railways of the German Railway Union, which is the next item in your brief. Is that a society independent of the existing companies—of the main lines?—If they were not State railways mainly instead of companies' railways, you might say they were light lines belonging to existing big companies. There are a certain number of them; about 400 miles of what may be fairly termed light railways belonging to the State or to the big companies, I suppose would be the best way of putting it. Out of those 400 miles 50 are on the public roads, and the rest apparently on private land. Of the 13, one is passenger only, one is goods only, and 11 carry both. Their gauges vary between 30 inches and 44 inches.

30,857. As compared with the gauge for the main lines?—Which is 56½ inches. The steepest gradient is 1 in 25; the sharpest curve is one chain. Practically our Board of Trade objects to anything less than 10 chains, unless exceptional precautions are taken. They run in the year 1,500,000 train miles, which is equivalent to 10 miles per mile of line per diem, that is to say, five trains each way. The average train is over 10 vehicles in length, and the capital is equal to 5,600*l.* per mile. I suppose it would be safe to say that the light railways belonging to existing companies are likely to be a little more elaborate, a little more important, than those which they have not thought it necessary to construct, and that would account for the capital being pretty high. The gross receipts are equal to 8*l.* per mile per week, and the working expenses are about 71 per cent., which leaves an interest on capital of about 2 per cent.

30,858. Have these light railways tended to promote local industries?—I think that is undoubtedly the tendency of the evidence. It is always spoken of as a question not only for agriculture, but for enabling mills, for instance, that are located in the country to stand the competition of the great centres.

Mr. W. M. Acworth.

13 July 1894.

30,859. And therefore to prevent the concentration in the big towns. It has rather acted as a contrary force?—I have not seen it put from that point of view, but I have no doubt that would be the effect.

Difficulty of constructing light railways in England.

30,860. Now, will you state what are the difficulties in the way of establishing those light railways in England?—At present the thing is entirely impossible. If anybody were to attempt to establish a railway of this kind in England at the present moment, he would have to spend a great many thousand pounds in fighting through the House of Commons as a private Bill what would be really a Light Railway Clauses Consolidation Act; that is what it would come to. He would have, on the individual points of each level crossing, and each occasion of doing without signals, and each occasion of doing without a platform, and so on, to fight it as a question of detail in his individual case.

30,861. Would it not be possible under the Tramways Act to construct these light lines?—There are two Acts under which it is theoretically possible. There is the Railway Regulation Act of 1868, which provides that a promoter may call his line a light railway, and then, in section 28, provides that "A light railway "shall be constructed and worked subject to such "conditions and regulations as the Board of Trade "may from time to time impose or make: provided "that (1) the regulations respecting the weight of "locomotive engines, carriages, and vehicles to be "used on such railway shall not authorise a greater "weight than eight tons to be brought upon the rails "by any one pair of wheels: (2) the regulations "respecting the speed of trains shall not authorise a "rate of speed exceeding at any time twenty-five miles "per hour." The Board of Trade never have made any general regulations under this Act. There have been attempts to induce the Board of Trade to modify its normal requirements in individual instances, but they have practically come to nothing. There is a very small railway opened, I do not know whether the Commission have heard of it, in the last week or two, the Lee-on-the-Solent. It is a little thing about three miles long, and runs down behind the forts at Gosport to the Solent. The only thing which the Board of Trade practically has done for them is to limit their speed to 10 miles an hour. Because they are a light railway, therefore the Board of Trade limits their speed; but it has insisted that they shall be an ordinary railway for every other purpose. The only exception is that they have not got platforms at the intermediate stopping places. They have been compelled to interlock their points, and all that; they have gatekeepers' houses, for example, at the crossing of the roads, which, of course, is a very serious expense. As far as any things of that kind go, the Board of Trade has insisted upon treating them as a normal railway. So there is no possible gain to a promoter to call his line a light railway; he only obtains the benefit of extra restrictions.

30,862. (*Viscount Cobham.*) Does he escape the passenger duty?—Practically they would not pay it because almost all their fares would be under a penny a mile, no doubt; but they would if there were any first-class passengers, certainly; and they are subject to all the ordinary requirements before opening the line for public traffic, which is really the onerous part.

30,863. (*Chairman.*) Is there a possibility under that Act, or under the Tramways Act, of their making their lines on the roadside waste by the side of the road?—Undoubtedly under the Tramways Act you can make a railway along the road, but I think it is practically impossible; in the first place, the Board of Trade restricts your speed to, I think, eight miles an hour.

30,864. But that is not a difficulty at law; that is a difficulty rather of administration by the Board of Trade, I presume; is there any possibility under the law as it now stands, subject of course to any regulations that the Board of Trade may make, of making such lines along the roadside waste or on the road?—The local authority in many cases has a veto, of course.

30,865. But that is not a legal disability?—No.

30,866. I understood you to say just now that it was practically impossible by law to make those railways; but the two main difficulties you have suggested so far are the difficulties raised by the Board of Trade, which of course they have it in their power to remit?—Yes.

Mr. W. M. Acworth. 3 July 1894

30,867. And subsequently the possibility that the local authority may interpose with its veto?—Yes. But, apart from this, the Tramway Acts do not give you compulsory powers, which is a very serious legal difficulty. You may find yourself in need of land, and you may have no means of getting it. I do not know that I ought to have put it so much as a legal difficulty as a practical difficulty. I think nobody would put money into an attempt to make an agricultural tramway along the roads in any ordinary circumstances. There is this very serious further difficulty; if you constitute yourself a tramway company you have no power to take terminals. You get a certain power to charge so much per mile. You bring traffic, we will say, six miles along your line at 2*d.* a mile, which gives you 1*s.* You have had the trouble of loading it into your truck, you run it into the station yard, and the railway company takes your traffic and has a right to charge your 1*s.* for terminals, which is a very serious practical difficulty.

30,868. I was responsible for the Tramways Act, but I cannot recollect whether under the Tramways Act you can carry goods as well as passengers?—Yes; I think there is no difficulty on that point; but the fact remained that the Tramways Act has been in existence so long, and there has been nothing done under it.

30,869. Of course it is important to discover whether the difficulties are difficulties which can only be removed by legislation, or whether they arise from the action of the Board of Trade, and of the local authorities?—Of course there is no doubt that the Board of Trade having exercised a discretion of limiting speed to anything like eight miles an hour, there is no question they will not, without the authority of an Act of Parliament, take it upon themselves to double that speed; there is no doubt that the Board of Trade cannot be expected in practice to do that.

30,870. At all events, assuming that it can be done, and could be done under the Tramways Act, that would only give power to use the public road?—Quite so.

30,871. When it comes to be a question of buying land for the purpose, either compulsorily or otherwise, it would be necessary to have a private Act?—Yes, undoubtedly.

30,872. And that would involve all the difficulties and all the expense of fighting it through Parliament?—Your scheme would be attacked by the opposition on the ground that it proposed a railway which was not a railway, and you really would not have a chance of getting it through a Private Bill Committee, I imagine, unless it were very strongly supported.

30,873. There is no reason to suppose that these light railways, made for the purpose of making communications between villages and the main lines, would meet with the opposition of the great railway companies, is there?—Provided that the new lines did not "short circuit," so to speak, the existing lines, I should think most railway companies would welcome them.

Light railways in Ireland.

30,874. Now, in the case of the recent Irish legislation, can you give the results of experience in that?—I did not know whether you wished to go into that. I only thought it right to put it on the proof.

30,875. Well, take it very generally, please?—There is no doubt, I suppose, that the local authorities in Ireland, who subscribed very largely under the Tramways Act of 1883 to support light railways, are very dissatisfied with the results. If they had the opportunity of reconsidering their guarantees, probably very few of them would give them. I thought it was right to mention the point lest one should seem to ignore it.

30,876. (*Mr. Chaplin.*) Which Act is it that you are referring to now; the Act of 1883?—The Tramways and Public Companies (Ireland) Act of 1883.

30,877. (*Chairman.*) And the Light Railways Act, 1889?—That was Mr. Balfour's Act. The Tramways and Public Companies Act developed a number of little local companies, independent of, and to a considerable extent, hostile to, the great companies; they were on a different gauge, and the great companies, I think one might say, treated them as step children; and certainly they do not run a very successful service. Then Mr. Balfour went back on that in the Act of 1889, and seeing the disadvantage of having these little companies managed by men naturally not of the first class—you cannot get a very first class manager to manage a petty local line on 100*l.* a year—and seeing the disadvantage of these small isolated lines, he was determined to bring the big companies into it, and accordingly he gave grants of money, in many cases, I believe, amounting nearly to the entire cost of the construction of the line, to the great companies, on the condition that when made they would work it.

Mr. W. M. Acworth. 13 July 1894.

30,878. Have those light railways been made?—Mr. Balfour's lines are either just opened, or just about opening. I believe the longest of them, the Galway one, is nearly ready, and the Achill Island one is half done, and so on.

30,879. Those, I think, are really extensions of the existing lines; they are the same gauge, are they not?—Yes, the railways under the Act of 1883 were practically all narrow gauge. Lord Spencer, I believe, let it be known—at any rate it was understood to be the policy of the Government of the day—that they would not give the Government guarantee which came behind the local guarantee to any except a narrow gauge railway, and so, practically, they were all narrow gauge. There was a revulsion of feeling against that, and Mr. Balfour's lines are extensions of the existing lines on the normal gauge; except in one case in Donegal, where the new line is an extension of a previously existing narrow gauge system; it is, of course, carried on on the narrow gauge.

30,880. The main operations under the Act of 1890 have been extensions of existing lines, with the same guage, into rural districts?—Yes; practically extensions to the extreme west coast.

30,881. Then they are light railways mainly in the sense that they go either upon the public road or are worked in a somewhat cheaper way?—I gather things have been somewhat turned aside from their original idea. Mr. Balfour practically said, "You have got 40 "miles of line to make, and it will cost you, my "engineers say, 150,000*l.* I will give you the 150,000*l.*" "The Company took the money, and they said, "These "lines will not suit us, we should be subject to various "restrictions if we made them in that cheap form, we "will spend the extra 50,000*l.* ourselves to bring them "up to a better standard." I believe that is what has really happened in a large number of cases.

30,882. Then practically it has come to this; that these operations are extensions of existing lines, and are not light railways in the sense in which you have been giving your evidence?—The difficulty, of course, is to say what is a light railway; really it is a negative term.

30,883. I rather gather from what you have just said, that the Government of the day determined that there should be these lines; that they were really to contribute what was the cost of the light railway; that then the railway company said, "No, give us the money, and we will extend our lines"?—Yes, that is, I believe, what happens.

30,884. So that practically the result is this, they are hardly light railways in the true sense of the term; they were extensions of the existing lines subject to all the conditions?—Yes.

30,885. (*Viscount Cobham.*) Were they under special conditions as to rates?—The statutory maximum rates are the same for all the Irish railways, including the lines sanctioned both under the 1883 and the 1889 Act. All the Irish railways undoubtedly came into the single schedule in 1892; the whole of the Irish railways were in one single schedule.

30,886. Do you mean those who are going to be opened immediately, those which are not opened yet, the subsidised lines?—I mean everything that was open in 1892, which certainly must have included a large number of the railways under the Act of 1883, if not any of the second set. All those were in the single schedule, and I feel sure no schedule has passed Parliament since.

30,887. (*Chairman.*) I suppose these extensions under the Act of 1889 have not been along the public roads, but have been like the main lines on purchased land?—I do not know; I have no doubt myself that they are on purchased land.

Failure of the Irish Tramways Act of 1883.

30,888. Then the experience of Ireland under the Act of 1883, which has been really in respect of light railways, has not been altogether satisfactory?—No. I do not think it could be said that they got good value for their money.

30,889. Can you give the reasons for that; why has that Act failed?—I should be inclined to say that the

Mr. W. M. Acworth. 13 July 1894.

first Act failed because there was no security taken that the railways would be used as well as they might be used when they were made. As for the second Act, I should not like to say it had not been profitable to somebody.

30,890. I am not talking of the second Act of 1889, because it may have been extremely profitable to the railway companies?—I think that is at least arguable.

30,891. That they were relieved of the cost of making their branches in fact?—Yes.

30,892. I am now speaking of the experience under the Act of 1883, which was more in the nature of a system of light railways than the Act of 1889, was it not?—Yes.

30,893. Of course it would be well to ascertain what were the causes of the failure of that?—It seems to me that the main cause is, if one might put it so, the difference between what was done in Belgium, and what was done in Ireland. In Belgium you have a national company with experienced men at the head of affairs, controlling the whole thing, seeing that a proper train service is given; seeing that the rates are such as the traffic will go at; seeing that the contracts for supplies, and everything of that kind, are properly managed; you have a centralised system in the hands of capable persons. In the other case you left it to a number of local people in remote Irish country towns, with no experience whatever of railways, who could not be expected to manage the thing satisfactorily.

30,894. All the money was raised wholly by the guarantees of the local authorities, supplemented to some extent by a State guarantee?—The local authorities guaranteed 4 or 5 per cent. for 30 years, or in perpetuity—there are different forms,—and the State undertook, where it approved the line, to repay the local authority any money it had paid under that guarantee up to a certain point which was 2 per cent. on the capital.

30,895. Then you consider that if there is to be any extension of the system of light railways to this country, the Belgian system should be adopted rather than the Irish one, and that there should be something of a central association?—I would not, of course, say that in England the State would naturally take as prominent a part as it does in Belgium, where it owns the main railways, but, undoubtedly, if the thing is to be a success, each individual local line must have the advantage of first-class engineers, and first-class lawyers, and first-class traffic managers, without having to pay the price that it would have to pay if it engaged them for itself. That is what it seems to me it comes to.

Prospects of working light railways in England.

30,896. Do you think there are prospects of profit enough in England to make it pay, independently of State aid?—Judging from a few isolated instances I cannot help thinking that there must be a very great many places in England where you can put down a line which would earn 10*l.* a mile a week; 10*l.* a mile a week means 500*l.* a mile per annum; 4 per cent. on 5,000*l.* would be 200*l.*; that would leave 300*l.* per mile per annum for working expenses. I think if the line is satisfactorily worked, that is quite a possible estimate. Of course it is all a question of management. If, for example, an unfortunate little line is to be charged a fancy rent for the privilege of running into a main line station, you may eat up the receipts of 3 miles of line at once. The sum is so small that there is nothing to cut to waste in it; but I believe, if the thing is prudently managed, it could be quite well done for the money.

30,897. Do you consider, then, that if the legal facilities were given, and if the modifications of the restrictions now put by the Board of Trade could be carried out so as to enable these light railways to be made as cheaply as they could be made, there is a prospect that private enterprise would come in and make the lines, subject, of course, to a reasonable concession?—I think you have got to do another thing. I think you have got to get the opinion of the locality turned to believing that these railways ought to be encouraged; it seems to me that as long as you have the road authority insisting that you must not cross their road, except in a very complicated manner, and as long as you have the authority of the small towns through which you pass making objections, and as long as you have a landowner standing out for an exceptional price, if you want to cut off a corner through his land, and so on—as long as there is a sort of general feeling, why should we not have a first-class line, such as we are accustomed to, which goes through tunnels in order to avoid us, and so on—as long as you have that general feeling, I do not see how you can make the thing a success. You have got to convert the public, it seems to me, first, or, at least, concurrently.

30,898. Is it your idea that they should be in the main made on the roads, or along the side of the roads?—I should not like to express an opinion on that.

30,899. Of course, it would make an enormous difference in this country in the matter of expense?—It would have so much to depend upon circumstances. There are some districts where the roads are obviously not wide enough.

30,900. That, of course, might raise a question whether some simple easy method might not be devised of enlarging the road for the purpose?—Yes.

30,901. Where roads are wide enough, what do you say?—I expect, as a rule, in England we are too thickly settled to make it advantageous to go along the road; I expect there is more vehicular traffic, and especially carriage traffic here than there is in most other countries.

30,902. Then, of course, if you come to the purchase of land, and the alteration of gradients, the question arises whether it is not better on the whole to have an extension of the existing lines, and whether you do not come, therefore, to great expense?—I think the answer to that is that you cannot get the extension; I think you have got to the end, practically, of lines of the present standard in agricultural districts.

30,903. But then might arise the question whether the same course might not be pursued in England which has been pursued in Ireland, namely, of the State giving some inducement to railway companies to make these extensions. It seems to me that you have to make your choice between one or the other—either an extension of an existing system, doing it, of course, as cheaply as possible, but with possibly some subvention from the State; or of utilising the existing roads?—In the estimate I was suggesting just this moment, I was assuming 5,000*l.* a mile for the cost; and I think you may say that 5,000*l.* a mile ought to enable you not to use much road anyway. I think there can be no doubt that you ought to be able to make a line pay for which you have to buy land, provided you do not have to pay fancy prices, because, after all, the agricultural value of land is not a very great thing. If you suppose that your land is worth 50*l.* an acre, you will not want more than 7 acres per mile of line; that is a very liberal estimate for the amount of land you want for a mile of line of that kind, and that is only 350*l.*

30,904. The present moment, when we are informed that land is becoming so valueless in the east of England, would be a very good opportunity of trying experiments in this direction?—Of course, if you get your land for 10*l.*, it would be different. I think 50*l.* an acre would be a fair estimate for agricultural land in most cases.

Easingwold railway

30,905. What is the cost of the Easingwold Railway that you have mentioned in your proof?—The Easingwold Railway was rather interesting for this reason, that it is only 2 miles long, and it was made by private promoters. Easingwold is a large village of nearly 2,000 people.

30,906. Where is it?—About half-way between York and Thirsk. It lies on the old high road to the north, and the coaches, I believe, used to change horses there. When the railway came, the railway ran about two miles off through a little place called Alne, and the traffic of Easingwold was accommodated by one omnibus, which went backwards and forwards to and from Alne. The Easingwold Railway was opened in 1891. It earned, according to the Board of Trade returns for 1892, 1,300*l.* roughly, which, you may say, is 650*l.* a mile, which is over 12*l.* per mile per week. Instead of the one omnibus they have at the present moment running a service of something like a dozen passenger trains a day each way to and from the junction, so that the amount of passengers they have carried is quite enormous. They carried in the year 1892 42,000 passengers, the population of the place being well under 2,000, and over 12,000 tons of goods and minerals.

30,907. (*Mr. Giffen.*) How much did they earn for goods?—I am afraid I have not it here.

Mr. W. M. Acworth.
13 July 1894.

30,908. (*Chairman.*) Is it a purely rural district?—I went to see the place, and I could see no trace of anything beyond a large country village. There was a smithy, and a village shop or two; but it was absolutely, as far as I could see, a country village, and no public institution, or anything of that kind, to account for exceptional traffic.

30,909. Is that a light railway in the sense that you speak of?—No.

30,910. Is it an extension of the existing railway?—Yes; the Board of Trade insisted on all the interlocking and everything else that would be required anywhere else.

30,911. That is really an extension of the existing main line?—It is a separate company, but works into the junction with the existing company.

30,912. Physically connected?—Yes.

30,913. (*Mr. Little.*) Does it run along the roads?—No, in every respect it is a normal railway; that, of course, is its difficulty—it has cost so much. I am afraid I have not the cost here, but it has cost so much that it is not likely to pay a reasonable dividend for some time to come; but if it could have been constructed in a more economical fashion, it would have made a very handsome profit for the promoters.

30,914. (*Chairman.*) Do you contemplate that there should be assistance given in the shape of guarantees by county councils for light railways?—Of course that is a large question, and I do not know that I have any special right to have an opinion on it. It does seem to me that these things anyway do not need a State guarantee; they, at least, do not need more than a county council guarantee.

Railway companies and light railways.

30,915. Do you think the principal railway companies would assist in facilitating the construction of these lines?—I think once the question was settled as a question of principle, they would. You have at present 20,000 miles of railway, which we will call Class A.; now, if you may construct railways of Class B. with a certain standard of construction, and appliances and methods of working which shall be very much more economical and simple than the existing ones—once you have a law to that effect passed, I think there is no doubt that you will have in all directions promoters coming to a railway company and saying: "Will you take up such and such a line," and I think the natural answer of the railway company will be: "Yes, get your Bill and we will give you a "working agreement which you can schedule to your "Bill," which is the common form now-a-days of getting a new railway made.

30,916. That seems to contemplate these railways being physically connected with the lines and really extensions of them?—I do not think the English railway companies would have much to say to them if they were not of the normal gauge.

30,917. If you are to expect assistance from the railway companies, it must be upon that understanding probably, that they are really extensions of the existing lines, although done in a cheaper way?—I should think that would be so. I am bound to say, however, that one of the leading authorities in this country said to me a few days ago that they ought unquestionably to be a narrow gauge, and when I asked him his reason, he said, "because we are so wedded in this country to "an extravagant method of construction, that unless "you break with your past altogether, you will have "the same extravagant system carried on to your new "lines," which is, of course, another point of view.

Opening for light railways in this country.

30,918. I presume you would say there is room for an enormous development of these light railways, and a possibility of a great expenditure of capital upon them?—I hear of a great many people who are anxious to put them forward. I keep on hearing of districts where people are inquiring whether it is possible to make a light railway, and so on.

30,919. But, looking at this country, in comparison with the other countries that you have mentioned, do you consider that there is a great opportunity for extension, and therefore the possibility of a great application of capital?—I think there is no doubt that there are many places in England very much further from a railway than they need be, which could afford the expense of a cheap railway but cannot afford the expense of a dear one.

30,920. And they would be a considerable advantage to the rural population?—I have no doubt of that in my own mind.

Mr. W. M. Acworth.
13 July 1894.

30,921. And to the farmers?—Yes.

30,922. And it would give large employment for labour in the construction?—Undoubtedly, in the construction. I think there is no doubt there is a profitable opening for capital in the country on that class of work. On the point of the value—of what you may call the contributive value of a branch to the line that it joins—there are French figures which have been worked out extremely carefully which may be summarised in this way; on an average, if your new branch carries 1*l.* worth of traffic *gross*, it will contribute a *net* revenue of 28*s.* to the main line that it joins. Of course the traffic going 10 miles along the branch will probably go a very much longer distance over the main line. I have been able to get in England figures which in some degree confirm the French calculations, which are these: there is a little railway in Suffolk, the Southwold Railway, which runs down from Halesworth, which is a small market town, to the sea, 9 miles off. The receipts of that line in 1893 were 3,658*l.*; the value of the traffic contributed to the Great Eastern,—the amount, that is, which the traffic passing off the Southwold line through Halesworth Station, on to the Great Eastern, or *vice versâ*, paid to the Great Eastern Company—was 12,123*l.* Of course that is gross value, not net value; and, no doubt some part of it used to reach Halesworth Station by cart or by conveyance of some kind before the railway was made. But there is no doubt, making all possible deductions, the Southwold branch has been a very useful feeder to the Great Eastern main line. I find, as showing how the traffic grows, they used to have an omnibus once a day, but last year the trains carried 88,000 passengers. The line was opened in 1880, I think.

The Southwold Railway.

30,923. What is Halesworth?—It is a small market town of about 2,000 inhabitants, and Southwold is a little town that sometimes does a little fishing, and has a good many lodgers in the summer season.

30,924. (*Mr. Lambert.*) Is this a light railway or an ordinary railway?—It is narrow gauge, and the Board of Trade, I believe, at the present moment, are requiring it to adopt continuous brakes and other luxuries, and the railway company has adopted a policy of masterly inactivity, I am told.

30,925. (*Chairman.*) Is it worked independently of the main line?—Quite.

30,926. It is a separate company?—It is a separate company, worked independently.

30,927. Does it pay, do you know?—I think it pays its debentures, but it cost 77,000*l.* on paper, whereas it would have cost 40,000*l.* in sovereigns; that is what I am told.

30,928. (*Mr. Lambert.*) What is the amount that it earns as dividend?—That is to say, net revenue?

30,929. Yes, after the working expenses have been paid?—I am afraid I have not it down, but I have here the gross receipts, which are 3,600*l.*, and I think you may say it is 1,000*l.* or 1,200*l.*, or something like that, net.

30,930. (*Chairman.*) How many miles is it?—Nine.

30,931. And it cost, you say, 77,000*l.*?—Its capital is 77,000*l.*

30,932. (*Mr. Lambert.*) That is on paper, but in sovereigns it ought to have cost 40,000*l.*?—I am told that that would have been a fair cost for the construction. I think I may say that on the best authority there can be on the subject.

30,933. (*Chairman.*) Including the purchase of land?—Yes, that would include everything.

30,934. (*Mr. Lambert.*) What would be, under the new system, the probable cost; what ought the line to be made for?—I do not think you could have made it much cheaper than the 40,000 sovereigns. If it had been made at that price it would have been practically a profitable undertaking.

30,935. It would only have paid 3 per cent.?—Yes.

30,936. (*Mr. Dalton.*) Has it developed Southwold much; has Southwold grown?—I believe it has grown. It suffers, no doubt, as compared with the other watering places on the coast, from having a break o gauge, and therefore being less accessible.

Mr. W. M. Acworth.
13 July 1894.

30,937. (*Mr. Lambert.*) But this is not agricultural traffic, this is purely pleasure traffic?—It has two or three intermediate stations. I suppose it has a certain amount of local traffic, presumably the great bulk is Southwold traffic.

Passenger traffic and light railways.

30,938. (*Viscount Cobham.*) These railways must depend, to a great extent, upon their passengers?—I should expect so in this country.

30,939. Therefore there should be a fair service of trains?—Yes. Belgium, for example, as compared with Ireland, impresses one with that, that the train service is so much larger. Of course Belgium is very much more thickly populated.

30,940. That being so there must be a very considerable passenger traffic to make it pay at all?—Either that or you must work your trains very cheaply. I saw a French light railway calculation not very long ago, in which—I think I am right in the figures—they calculated that it cost them 5*d.* a mile to put on a new train, and they could get 7*d.* out of it, and accordingly they put it on.

Light railways in Ireland.

30,941. Do you think that, under existing conditions, these Irish railways, even with the subsidies that they have received, could work their lines at a profit?—I should not like to say that. I do not think I know enough of local circumstances to justify me in saying so, but I am not surprised that they do not work them at a profit now.

30,942. Are they railways in the full sense of the term?—No, one is under the Act of 1883; they are the only ones I have practically seen, and they are narrow, mostly.

30,943. I think you said that the railway companies had made them practically part of their own system?—Those are the lines under the Act of 1889.

30,944. I am speaking of those?—They are not opened.

30,945. I am asking for a forecast; do you think, constructed and managed in the ordinary way, that these railways will be able to make a profit to the companies, even after the receipt of the large Government subsidy?—I could not say.

30,946. (*Chairman.*) I think you admitted here that they are not light railways in the sense you are recommending; that is what I gathered from you?—They evidently are lighter than the normal English railway, so to speak. Light railway does not denote anything positive; it denotes a reduction of the ordinary requirements, sometimes only a small reduction, sometimes a very large one, but anything between the two.

30,947. (*Viscount Cobham.*) In Ireland they have been constructed at a cheaper rate than the railways of the company?—Undoubtedly they have.

30,948. (*Chairman.*) From what you say, there is no evidence that these railways, made under the Act of 1889, were any cheaper than the main lines?—I think it is so; as a matter of fact, I have no doubt of it. They conform to the Board of Trade requirements undoubtedly.

Cost of construction of light railways.

30,949. (*Viscount Cobham.*) Do you think the cost must be restricted to a maximum of 5,000*l.* a mile if they are to pay—I am speaking now of England?—I would not like to say that, because supposing you got a working agreement from a great company, which it seems to me you might very fairly get, giving you a rebate on the traffic that you procured for them, you evidently could afford to spend more in capital; or if, again, you got an agreement to work at a very low percentage, you could afford to spend more. But it seems to me that it would be a reasonable sort of average to put, that you spend 5,000*l.* a mile, and that you earn 10*l.* a mile a week revenue capital. If you allow 60 per cent. for working expenses the remainder would give you 4 per cent. on your money. It seems to me that is a reasonable way to put it all round.

Rates for agricultural produce on light railways.

30,950. Have you calculated what should be, roughly speaking, the scale of rates for agricultural produce upon these railways?—I confess it seems to me there that all the continental evidence is that you must have a very much freer hand than the great railways have. It is a question of the price you can afford to take and the price it pays the farmer to pay. In some cases you probably would get very high rates, and in other cases you can afford to take low rates. If you have a company largely interested, not in making a dividend, but in developing the district, I do not think you would have any fear of having rates unfairly high. I do not think there is any chance of anybody going into this in order to make a very handsome profit.

Mr. W. M. Acworth.
13 July 1894.

30,951. Do you count upon having, generally speaking, a lower scale of rates than the present scale of rates?—I should not like to say that. I do not think you can expect that if you are to have a short line of 6 or 7 miles which is to get no benefit from the 40 or 50 miles further that the traffic goes.

Passenger fares on light railways.

30,952. As to the passenger fares, would you leave that to be fixed separately for each light railway?—I should like to. It seems to me as long as the carrier is beaten, *pro tanto* the farmer who is carried or the farmer's wife gains. If you are going to have a strict Board of Trade schedule to start with, I do not think anybody will make the line unless the interest is guaranteed.

Connection of light railways with main lines.

30,953. As to the question of gauge, if one of these light railways runs to a place large enough to consume all the produce, there would be little necessity in that case, would there, of connecting with the main line, and the gauge may be any gauge that may be considered the most convenient. It is only when produce has to pass through, that the question of gauge becomes important; is that not so?—Yes, that is so, no doubt, theoretically; but would it be so practically? If a place is big enough to consume all the produce, is it not likely to have other railways, and will not people want to go through it, and so on?

30,954. Passengers?—Passengers and all kinds of things.

30,955. Of course you are then faced with the great expense of connecting up with an existing station—a large station probably—and that means additional cost?—Yes, of course if you are going to maintain the present arrangement of a signal-box at the station before you connect. I think you must do almost anything to avoid that arrangement.

30,956. Still, at the junction, of course, all the Board of Trade regulations must be strictly observed?—I am afraid there will not be many light railways then.

30,957. (*Chairman.*) If they are in physical connexion with the main line?—Yes.

30,958. The noble Lord was suggesting: Is it not an argument rather for making them of a much narrower gauge, so that there should not be all the difficulties of the physical connexion and the Board of Trade regulations?—My answer to his lordship would be that if this is the best thing you can do you must do it; but that the real thing to do, judging by the experience of every other country in the world, is to modify the Board of Trade regulations. Of course, if that cannot be done, the other may be the next best alternative.

30,959. (*Mr. Chaplin.*) Do you mean to say this, that you contemplate a junction with the main lines, and that the trains from the light railways are to use the main line without being subject to all the regulations at present in force?—I confess I do. I contemplate what happens in every other country in the world.

30,960. (*Viscount Cobham.*) Would it not be sufficient for your purpose if the train was run into a dock separate from the main line, so that there should be no fouling of the main line?—Of course I do not mean a railway coming on to the line anyhow. It is really a very technical point how the junction is to be made.

30,961. Of course in that case there is the question of land, and for that reason the extension of existing stations is often exceedingly difficult?—Yes, as your lordship knows much better than I do.

Light railways and accidents.

30,962. There is a very great regard for the sanctity of life in England; do you think there will be any appreciable increase in the number of accidents?—I was trying to find out about that. I travelled a good deal a few weeks back on the light railways in Belgium, and when we did run past people's front doors I inquired, and nobody seemed to think there was any practical risk. I find the International Railway Congress, which has discussed these subjects very often, has expressed quite strongly the opinion of different nations that the dangers do not occur. There is a formal resolution on their proceedings a year or two back, for example, that doing away with gates at level crossings is on the whole an advantage; that the gates cause more accidents than they cure. They may be biased, but as they are largely people working State railways, they cannot be supposed to have any private

Mr. W. M. Acworth.

13 July 1894.

interest in dividend earning to conflict with their public duty to secure safety.

30,963. (*Mr. Chaplin.*) How would you keep stock off the lines, for instance?—I imagine to a considerable extent you do not keep them off. We are contemplating here trains weighing about as much as three heavy wagons, travelling, at perhaps, 18 miles an hour. If the cow does not get out of the way you stop. Of course the Board of Trade arrangements contemplate a train of 200 or 300 tons running at 50 or 60 miles an hour, and the cow cannot get out of the way, nor you stop, in that case.

30,964. You would be able to pull up with your light railway?—Yes.

30,965. Just like a carriage would?—Quite so; and you can pull up just as easily as you can pull up a brewer's dray. In some cases abroad they make the regulation that you must put fences if you are on the level of the surrounding country; if you are either above it or below it they do not require them; as a matter of fact they do run 18 miles an hour without any fence.

30,966. (*Chairman.*) Alongside the road?—Yes.

30,967. Can they run at that rate without danger of horses being frightened, and so forth?—I watched for a great many miles, and I passed a great many horses, carriage horses and horses of all kinds, I did not see anybody frightened. I suppose it would be just like bicycles; they would be frightened to start with, but they would get quite accustomed to it.

30,968. (*Mr. Dalton.*) They carry lights at dark, I suppose?—Yes.

30,969. (*Viscount Cobham.*) I should have thought in England, at least, there would be a good deal of infant mortality consequent upon this?—I asked that question. I said, "Will you not have a child running "out of the house and getting under the wheels?" and they said, "Well, no," and after all one does not see why they should get any more under the wheels of a train than under the wheels of an ordinary carriage.

Light railways on the Continent.

30,970. (*Mr. Whitehead.*) Is not one reason why light railways are necessary in the continental countries you have named, and that they have paid there, that the ground is not so covered with ordinary railways as in this country—speaking generally?—It is difficult to get precise figures, but my impression is, that, if you took off in each country the railways in purely mineral districts, if, for example, you took off the districts round Namur and Charleroi in Belgium, and took off Lancashire and similar districts in England, and compared agricultural district with agricultural district, you would find we have got certainly not more but rather less railways.

30,971. Rather less?—Rather less per square mile of agricultural country; we have less rather than more. That is my impression, but it is difficult to compare accurately.

30,972. Could you give any typical agricultural district which you think would be well served by a light railway in this country—is there any place that you could name?—Taking the valleys running up into Dartmoor, there is a railway at this moment which is promoting an Extension of Time Bill for a line from Exeter to Chagford; I do not suppose it will ever really be made on the normal standard, but I think it would be made very shortly if it could be done at half the price.

30,973. I am speaking from an agricultural point of view, and of a line applicable to farmers?—I was thinking of this as a farmers' line. There was a line suggested the other day, for example, across North Hampshire from Alton to Basingstoke—I should not like to say that I knew, of my own knowledge, any of these railways were the right place for an agricultural line, but I constantly hear suggestions for these railways. I was speaking to the engineer of the Lee-on-the-Solent Railway, who tells me that he has had, since his name has been in the newspapers in connection with that railway, because it is called a light railway, half-a-dozen applications from different people asking whether something cannot be done in their neighbourhood.

30,974. I think you said, in answer to the Chairman, that very few of the country roads in England would admit of a line being placed by the side?—I should not like to say I had any such knowledge as would entitle me to answer that question.

30,975. I think I may say as a fact they would not?—That is what the engineers tell me; they think it would evidently have to be bought land in England.

Mr. W. M. Acworth.

13 July 1894.

30,976. In those circumstances you would have to go across the country and buy land as you could?—My own impression is that there is not a great field for railways along the road.

30,977. (*Viscount Cobham.*) But a strip along the side of the road would be much cheaper than a line going across the country?—You mean to widen the road and put the railway at the side.

30,978. Yes?—It seems to me that that is a question of detail for the individual case, and the individual part of the country—take Essex, for example.

30,979. (*Mr. Whitehead.*) In the case of the continental lines, I think that the greater part of them are carried along by the side of the existing roads—I think you said that?—I said so in Belgium and Holland.

30,980. Not in France?—I think not in France. The instance I gave in Germany was 50 miles on roads, and 350 miles off, in a particular group of lines.

30,981. I think you said the average cost of such continental light railways was 4,000*l.* a mile?—4,400*l.*, including rolling stock, if on bought land.

30,982. I understood that was the general average?—No, I think that was on bought land for the normal gauge.

30,983. Of course the circumstances are quite different in continental countries, at least in Belgium and Holland, because the roads have been levelled up specially for the purpose have they not—they have been made by the State?—These railways have been put on pre-existing roads, and the roads have not been much altered so far as I know.

30,984. You would not obtain those circumstances in this country?—Of course most of England is a much less flat country than Belgium, but I do see any very great difference, as far as the location of a line is concerned, between Essex and Flanders. However, I should not like to speak as an expert on that at all, it is really quite out of my beat.

Light railways and fences.

30,985. I think, in answer to Mr. Chaplin, you said you thought it did not matter that there should be no fences to these light railways, as there would be no great amount of danger to life or property in the shape of stock?—If you once admit that you can safely put them on the roads, it stands to reason that there cannot be any great risk in putting them on to the fields, where there are fewer people in the way than there are on the roads.

30,986. (*Mr. Chaplin.*) There are a great many more stock?—Undoubtedly; but I confess I do believe the cow gets out of the way, and if she does not, you stop.

30,987. (*Mr. Whitehead.*) In America they have what they call cow-catchers on the trains?—Always; of course they run everywhere in America night and day expresses at full speed without fences.

30,988. Do you think the Board of Trade would sanction that there should be no fences to these railways?—I think it is quite impossible to suppose that the Board of Trade will do anything except insist on theoretical perfection as long as the public opinion remains where it is. If there is an accident, public opinion says: "Why did not the Board of Trade insist on further precautions?" and as long as public opinion says that, and never says why do we not get cheaper railways, I do not think you can expect anything of the Board of Trade except what they are doing at present.

Receipts and working expenses of Easingwold Railway.

30,989. (*Mr. Giffen.*) With regard to the Easingwold Railway, I asked you the question what the receipts were from goods traffic, and I think you said that the traffic carried was 1,200 tons; was that not rather a slip? Your figure should have been 12,000 tons, should it not?—I think it is 12,000.

30,990. The receipts I find, from the Railway Return which I have got before me, were 600*l.*, which answers the question I put to you?—From goods?

30,991. From goods?—Then that would be roughly half and half.

30,992. Half and half; and that would be a rate of 1*s.* for goods for the 2 miles?—That would be probably on the average a terminal of 6*d.*, and another 6*d.* for the mileage rate, or something of that kind;

Mr. W. M. Acworth.

13 July 1894.

there evidently must be a short distance clause or a terminal, or both, to explain so high a rate.

30,993. I cannot tell you how that would be?—That rather answers, I think, Lord Cobham's question. If they get an average goods and mineral rate of 1*s.* for 2 miles it looks a very high rate.

30,994. (*Mr. Lambert.*) You could convey the goods cheaper by horse?—But there is the point that you do get 12,000 tons.

30,995. (*Mr. Giffen.*) You told us, I think, that the gross receipts were about 1,311*l.*, that is the figure for last year?—Have you the 1892 figures?

30,996. Yes?—I was told by the general manager of the North Eastern that in 1893 it was over 1,300*l.*

30,997. For 1892 it is 1,311*l.*?—Then it has not gone up so much as I thought.

30,998. The working expenses, I find, are 1,256*l.*?—Yes. Of course that is really the whole point of the matter. The Easingwold Railway has one engine, and if that engine goes wrong, they have to send to the maker at Leeds and ask him to send down a man to put a new ferrule on a boiler-tube, or something of that kind. Obviously, their expenses are out of all proportion. You must get them to be benevolently treated by the big line with whom they connect.

30,999. Are you quite sure that is the explanation, because I find that the charge for maintenance of way and works is 179*l.*; for locomotive power, including stationary engines 326*l.*; for repairs and renewals of carriages and waggons 5*l.*; and for traffic expenses, which are the chief thing, 550*l.*?—Would you mind giving the general expenses; that is another point, I think, worth taking.

31,000. The general charges are 129*l.*?—Of course, there is just this question: you cannot say the secretary and the Board are over-paid at 129*l.*; but if you say that they get 60*l.* a mile from the line it is very heavy indeed. The point really is, that the little line can hardly live if it is expected to pay all this expense, as if it were a big line.

31,001. It would be cheaper to be worked by a bigger company?—There is no doubt that if the North-Eastern took over that line they would fairly charge it with only, say, 600*l.* a year for working expenses.

31,002. And that would leave a fair profit to the company?—I believe it would, even at the price they made it. Of course, they made it much more expensively than if it had belonged to a big company, naturally. The parliamentary expenses are very heavy if you have got to promote a little two-mile line, while if you put it into an Omnibus Bill they are practically nothing.

31,003. Did you tell us the percentage of net earnings on the Southwold Railway?—I do not think I have it here.

31,004. It seems to be worked at an expense of 80 per cent., according to the return which is before me; and the net income was 700*l.* to go towards paying the interest on 75,000*l.* of capital?—That would be so. There again, I venture to urge that the general charges of that line are 300*l.* a year, which is nearly 10 per cent. on the gross receipts. I do not say it is too much; I do not say the people who give their time ought not to get that amount of money, but it is a tremendous tax on a little railway.

31,005. Three hundred and thirty-six pounds, I find is the last item?—Of course, if those questions which come up to an engineer in London could go to the engineer of the Great Eastern Company, who would solve them as part of his daily business, they would really cost nothing.

31,006. The traffic expenses, I find, come to 870*l.* for 3,560*l.* worth of traffic, or something of that kind?—That seems something reasonable.

31,007. Still you do not deny the fact that none of these instances which you give have been at all paying instances, and that you would require amendments in order to make these lines pay?—That is my case. In the first place, there is the method of construction, including parliamentary proceedure, and everything which makes the initial capital cost to start with too high; then the requirements of the Board of Trade, if I may be allowed to say so, make the working expenses too high; then finally the fact that they are nobody's children, and that the railway company does not help them, makes them bear all the expenses that possibly can be put to their charge, and not get credited with all the receipts they really earn. I think that is the case.

Mr. W. M. Acworth.

13 July 1894.

Liability for accidents on Continental light railways.

31,008. (*Mr. Gilmour.*) In these parts on the Continent where the local authorities allowed these lines to go along public roads, did you find out on whose shoulders the risk of damage for accident came?—I have no doubt it is on the company, in the case of negligence.

31,009. On the railway company?—I have no doubt of it. In Belgium, for instance, the National Company leases the line to a working company, and the working company is required to take the responsibility for accidents caused by its own negligence. There is a clause in the lease to that effect.

31,010. I think you replied to one of the questions put to you to the effect rather, that there were comparatively few accidents; at any rate, you did not lead one to understand that this traffic on the public road was dangerous?—Really, I do not know that I am entitled to say that I know that. I talked over the matter with the conductors, and asked them whether there were any accidents, or whether there were any public complaints, and they were quite positive that there were not. That is all my authority; I have not the returns.

31,011. You have no record of the accidents on the lines?—No.

Advantages of light railways to Agriculture.

31,012. (*Mr. Little.*) I think you said that you were not prepared to speak as to the exact benefit that light railways might be to agriculture; you are not practically acquainted with agriculture?—No, I have no title to speak as an agriculturist in any sense.

31,013. If it be assumed that in the present day the situation has become much more important as respects the value of land than it was formerly, it must be of advantage to agriculture to improve the situation of farms in a great number of districts?—I think that is so.

31,014. If it be a fact that under the present system of farming a much larger part of the produce—bulky produce—is removed than was formerly the case, there must be an increased necessity for means of transit?—Yes.

31,015. Anything, therefore, which cheapened transit, and rendered it more easy, would be a benefit to lands lying remote from railways?—Yes.

31,016. Would not the removal of produce by railway, instead of by road, be a great saving to the roads?—The saving in the cost of the maintenance of roads I know is put down abroad as one of the obvious advantages to the local authorities.

31,017. If it were clear that the local authorities would save in the cost of their roads they might be fairly be asked to make themselves to some extent responsible for the making of these light railways, this would not be unfair?—I think that is so.

31,018. I think you said that these railways can only answer if public opinion is in favour of them; that if there are to be difficulties thrown in their way by all the residents, they are not likely to succeed?—It is obvious that if at each turn, for example, you are to go before a tribunal to assess compensation, and if you are to have to fight a great opposition before the two Houses of Parliament, you will have added on what, to a main line, is only a small percentage of the cost, but what may be doubling the cost of the local line.

31,019. If the county council of any county were in favour of a line of this kind, it might fairly be supposed that the public opinion of that county was in favour of it, the county council being representative?—Yes.

31,020. It would be an inference that there was no strong local opposition, if the county council were in favour of it?—Quite so, subject, however, to the criticism that the county council may be somewhat far removed from the locality immediately affected.

Tariff on Belgian light railways.

31,021. With regard to the Belgian lines there is a fixed tariff for all distances, is there not?—I believe there is a mileage tariff applicable to the whole of them.

31,022. But there is also a fixed tariff for any distance for certain goods?—I do not think I quite follow your meaning.

31,023. Here, in this report, is a special tariff: "Established with a view of assisting the transport of "agricultural produce"; "A fixed tariff for all "distances 50 centimes per ton"?—Surely that must apply to an individual line?

Mr. W. M. Acworth.

13 July 1894.

31,024. (*Mr. Elton.*) There is a "Variable tariff" added, which makes a variation?—*Witness (looking at the report).* The item set down first there is practically a terminal, what they call, "Frais accessoires;" there is the mileage tariff in addition to this 5*d.* terminal.

31,025. (*Mr. Little.*) That is what I did not understand. Is there a special low tariff for agricultural produce on these lines compulsorily?—The tariff is fixed by the State undoubtedly; whether it is fixed for the individual line, or for all the lines of the company, I really do not know.

Upwell and Outwell Tramways.

31,026. There are in this country railways of the kind that you have been describing, which if not light railways are railways which run upon high roads, and which are connected with main lines?—The only one I know is the Upwell and Outwell Tramways, which run from Wisbech for about six miles or seven miles, I think, along the road.

31,027. Almost entirely along the road?—Yes, that I think is made under the Tramways Act; in fact I feel sure it is.

31,028. It was made by the Great Eastern?—It was made by the Great Eastern, not as a railway, but as a tramway, I think; but I would not like to be sure of that.

31,029. There are no signals?—No.

31,030. Or fences or crossings?—No.

31,031. Or stations or platforms?—That is so.

31,032. The expenses which you said were prohibitory in the case of light railways do not occur there?—That is so. But then, if I might be allowed to point out the disadvantage, they are limited, I think, to a speed of 8 miles an hour, or something very like it—it certainly is not much more; it is a speed so low that, if it were a line 20 miles long, in all probability it would pay you to go a long way round by an ordinary railway. In the second place they have avoided one difficulty, which I venture to suggest was a very serious one; they get a lot of traffic at a place called Outwell Basin, or Upwell Basin.

31,033. In connexion with the canal?—In connexion with the canal; I forget whether it is traffic to the canal or traffic from the canal, but I know there is a great transfer there. If they be, as I think they are, under the Tramways Act, they would have no power to charge a terminal at that point, but as they belong to the Great Eastern Company, the Great Eastern Company can charge the terminal at Wisbech Station, whereas if the tramway company were independent it could not afford to do the transfer service and let the Great Eastern be paid for it.

31,034. The difficulties which have been put before us to-day as standing in the way of an extension of these railways, have not proved insuperable there?—No, but what the local county council would say, if it was proposed to increase the speed to 18 miles an hour, I do not know; I am afraid they would not approve of it.

31,035. Then you think that the main difficulty of making more lines of that kind would be the limit of speed which the Board of Trade put?—The main physical difficulty, as distinguished from the commercial difficulty.

31,036. What were the other difficulties which the Board of Trade interposed to the making of more lines of that description?—If I am right in saying that in order to make it profitable you must call it a railway, then once you call it a railway the Board of Trade require, if I may take one instance, a platform 3 feet high, 6 feet wide, and long enough to accommodate the longest train that will go on that line in the height of summer, which means an expenditure of about 500*l.* out of pocket. That is one item. The result of it all is, that the railway companies say, "We "cannot afford to put up this station; it will cost us "800*l.* at least for that station, and probably we shall "have to put in a passing place for trains, and then "we shall have to make platforms on each side; it "will cost us so much to make a station that we will "not make it." The result is, that when stations have been made to cost at least 1,500*l.* a piece, the companies run their lines five or six miles through the country without a station at all, and the further result is that they do not get the traffic or develop the district; the thing acts and re-acts.

31,037. Do you know whether this is a successful extension, or not?—There are no accounts, but I have always understood that it is successful, it looks successful; it certainly carries a large traffic.

Mr. W. M. Acworth.

13 July 1894.

31,038. The opinion in the neighbourhood is that it is exceedingly successful?—I went on it once, and I was very much impressed with the number of people who got in and out all along it.

31,039. The regulations of speed and the question of charging terminals seem to be the only difficulties that you can state in extending such a system by railway companies themselves?—I think there is the further difficulty suggested of compulsory powers

31,040. But have they not compulsory powers?—Not if they are a tramway company.

31,040*a*. But in the case in question they took land compulsorily for sidings, and for making short cuts?—Of course, the Great Eastern Railway Company may have modified the ordinary law in their private Act; but that is a sort of thing that is easier for a great company than for very humble local promoters.

31,041. I happen to know that they bought land under the Lands Clauses Consolidation Acts for their railway?—I was only putting it this high, that the Tramways Acts, as a rule, do not give you that power; of course, you may incorporate the Lands Clauses in your particular Bill, but if you work under the Tramways Acts *per se*, and subsequently get a Board of Trade Provisional Order under them, without going to Parliament for a special Act, you do not get compulsory powers at any stage.

31,042. Do you know whether there is any complaint as to accidents on that line, and as to whether the accidents are numerous?—I have not heard of any. But then, of course, it is eight miles an hour, and it might be said that it would be quite different if it were 18 miles an hour.

31,043. Do you know anything of the Wantage line, which is a similar line?—I only know it does go on the road; I have often seen it on passing the station. I know it runs on the side of the road there, and it is a narrow gauge one.

31,044. The Wisbech and Outwell is a full gauge line?—Yes.

31,045. They run into the station yard and transfer their trucks?—They have a special passenger stock very much of the nature of an ordinary tram car; the goods traffic is worked in the ordinary Great Eastern Company's waggons.

31,046. Without any transhipment; they are run into the station yard, and then shunted on to the main line?—Yes.

Cost of construction of light railways.

31,047. (*Mr. Chaplin.*) I suppose that the success of a scheme of light railways would depend very much upon the character of the county in which they were attempted to be established, whether, for instance, it was a flat country, or a very hilly country?—Of course, it must be more expensive in a hilly country, but I think it is evident that the mountainous character of a district will cause a less excess in the cost of construction of a light railway, than in the cost of construction of a normal railway, because a light line can accept much steeper gradients, and much sharper curves.

31,048. Quite so, but when you give us your estimate of 5,000*l.* a mile for the construction of an ordinary light railway, was that taking into consideration the cost of a very hilly country?—I am not an engineer, and I am only taking it from the evidence that on many lines of all kinds, in all countries, that is in excess of the average of all countries.

31,049. You gave us Belgium as an instance; I have never been in Belgium myself, but a great deal of that is very flat, is it not?—Yes; then of course the cost of construction is very much lower there; it is under 3,000*l.*

31,050. What is the character of the country through which the so-called light railways in Ireland are made?—I have seen some of them in what you would call an ordinary country district in England, I think; of course they always practically follow the configuration of the ground; they do not attempt to go through big tunnels, or anything of that kind; they could not do it.

31,051. They do not make cuttings or embankments?—Not more than they can help; they would not do it where a main line would think it necessary to do it, in order to keep the gradient flat.

31,052. Then I may take it, I suppose, that where cuttings and embankments were at all necessary, they

Mr. W. M. Acworth.

13 July 1894.

would be a very great hindrance to the establishment of a light railway?—Undoubtedly.

Speed of light railways.

31,053. One objection to making them on the roads, I understand, is a slower rate of speed, in all probability. You would be required to go at a slower rate?—I believe they are required to go at 12 miles an hour in Ireland, but the speed I have given in Holland and Belgium as 18 miles an hour is along the roads.

31,054. Do you anticipate that that would be feasible in England with the great traffic we have?—I do not think there would be any objection, except in public sentiment, and I think that would be a strong one.

31,055. Against the speed?—Yes, I do think the public would object, and I think myself they would be wrong in objecting.

31,056. Then I do not understand that those railways are always to be made upon the roads; you contemplate sometimes that they may be made over the country?—My idea is, that you would not find it practicable to make them on the roads in England, as a rule; there may be instances, like some of the great old roads with very wide spaces on either side, where you could do it, but I do not think, as a rule, the ordinary country road would take a railway.

31,057. Then they would have to be made across the fields?—Yes.

Light railways and fences.

31,058. I see a very great practical difficulty in that respect, if you are to have neither fences nor gates, nor divisions; take the case of Belgium and other countries on the Continent, and in America, there most of the land is unenclosed, is it not?—Yes.

31,059. In England all the land is almost entirely enclosed, and divided into fields?—Yes.

31,060. Do you not find a great difficulty in this respect, at the end of every field there must be a gate; there must be some division between the fields?—Yes.

31,061. How are you going to get over that?—I think it is quite evident that if you are going through fields you must be fenced off from those fields, but if the thing were approached from the point of view that a fence must be put up where necessary, and such a fence as is necessary, it means one character of expenditure; if, on the other hand, a fence must be put up which will keep the theoretical bull off the railway, if he is most determined to get there, it is a much more expensive thing.

31,062. That is not the only difficulty here; in the fields in England, we will say half of them, or a large portion of them, are full of stock of all sorts and kinds?—Yes.

31,063. This stock must be kept out of other fields?—Yes.

31,064. If you are going to make a light railway running through fields in which there are a lot of stock unguarded, you might have the stock on the one side of the hedge going round by the railway, and getting into a cornfield on the next?—You must obviously have such a fence as is necessary in that individual case. I think there is no doubt of that; but you need not set up a standard that you must have a fence at least four feet high, and of not less than six wires. I forget the exact Board of Trade regulation.

31,065. You must have a fence sufficient to keep out the stock?—Yes.

31,066. If you have to provide for fences of that kind, to fence your railway in, instead of leaving it open, would that interfere with its success as a paying scheme, would it not add very largely to your expense?—I think not. I am told it would be about 200*l.* or 300*l.* a mile for a cheap kind of fence, but I am probably speaking in the hearing of a dozen people who know very much better than I do.

31,067. Had you taken that into consideration before?—I have not attempted to make any actual estimate of the cost in England beyond this, that England is a more expensive country than the Continent, and if the Continent can do it on an average for 4,400*l.*, which of course must be an average over a large number, probably if you put on 10 per cent. you may be somewhere near it; but if anybody said 6,000*l.* I would not attempt to contradict him.

31,068. What I am rather wanting to get at from you is this, whether in the case where you have to make it across the country, and to make the railway with ordinary fences, which in the first instance, I understand, you did not contemplate, and in the case also where at the same time it is a hilly country, do you think it would be a practicable scheme?—An engineer was telling me quite recently that he had been examining a scheme for a light railway in a country—it is perhaps not quite fair to mention where it is—but it is a country which is almost purely a grazing country, and a very hilly country; he said, "I think I could do it to make it a success if I could "keep the cost down to ——"—I think the figure was 6,000*l.* a mile or 7,000*l.* a mile—but he said, "If I am "to come up to the ordinary standard, I shall have "to spend 12,000*l.*, and the thing is impossible."

31,069. I can quite understand that; that it will succeed very well, and will be very advantageous wherever it would succeed, for that matter. It would succeed I think in flat districts, for instance, the fen districts in this country, especially if it could be made on the roads. Why did you express the opinion you did just now, that, as a general rule, it could not be made, you thought, upon the roads; was that because of the sentiment against it?—Partly that and partly because I think the roads are hardly wide enough. Our English roads are not laid out as a rule by skilled engineers, and are made much more casually, I think, than most of the continental roads; they have just gone anyhow round a corner and back again, and you cannot do that with a railway. You have to cut off so many corners probably that it would be better worth your while to make your line independently. That is my impression. On the point of flat versus hill you have this advantage, that in a hilly country you have the traffic naturally flowing to the railway; if your railway runs along the bottom of the valley the traffic must converge on to it, whereas in the case of a flat country the traffic spreads itself in all directions. So the one somewhat balances the other.

Legislation necessary to establishment of light railways.

31,070. Assuming that you could get over all the difficulties of construction, then you are confronted at present with all kinds of legislative difficulties; what steps would have to be taken to begin with if it was attempted in Essex to establish such a system; you would want, I suppose, special legislation to start with?—My impression is that you would want a Light Railway Clauses Consolidation Act, so to speak; you would want general legislation dealing with all the points, dealing in fact with more than the Railway Clauses Act contains, dealing with the question of the acquisition, dealing with methods of construction and setting up a certain normal standard of construction, dealing with the method of acquiring the Act, dealing with the powers of the county councils, we will say, to guarantee, and various things like that.

31,071. What about the acquisition of land?—Of course, that is the most difficult thing of all; I do not know whether there would be any objection to allowing a jury assessing compensation to take into account the possible improvement of the land, which is practically of course betterment.

31,072. The present powers of acquisition of land for other railroads would not be sufficient for this purpose?—At the present moment you give the man who sells his land the right to get all he can for it, and the railway company cannot set off the fact that the rest of the land not taken will be very largely benefited. I do not know whether it would be considered a fair thing to upset by Act of Parliament the judgments such as Senior v. Metropolitan Railway Company which says that the benefit is not one of the elements to be taken into consideration, and simply to enact that the jury may take it into consideration. I should not like to say it ought to be done, but it has sometimes occurred to me whether it would not be fair to do it.

31,073. You would consider that almost necessary for the success of anything of the kind, do I understand that?—That must depend upon circumstances. You might have a line going for the whole distance through the estate of a benevolent landowner and then no difficulty occurs, but I think there is no doubt that with the present sentiment you would have the risk of having one or two opponents, and I do not see how these little things can afford to spend any great amount of money in fighting opposition. The cost of a private Bill is nothing to a big railway—it is a fractional percentage if it is a big railway—but it is a very big percentage if it is one of these small things with a capital of 50,000*l.*

Mr. W. M. Acworth.

13 July 1894.

31,074. Then it becomes a very serious matter and would interfere with the success of any scheme for the purpose?—If 10 per cent. of your capital has gone to start with in parliamentary expenses, it is very serious.

Light railways and country roads.

31,075. (*Chairman.*) Might it not be possible to enlarge the roadside waste, or the road if that is not wide enough for making this railway; might it not be a simpler method, instead of buying land and cutting through a field to widen the roadside, say, by five or ten or whatever number of feet might be necessary?

(*Mr. Chaplin.*) That would mean making one new fence and half a new road, instead of two new fences.

(*Mr. Elton.*) The county councils have power to enlarge roads.

(*Witness.*) They might have power to enlarge the road, but have they power to enlarge it in order to accommodate a railway—to sublet the road as it were?

31,076. (*Chairman.*) In making a railway through a field you would have to sever a man's property, and the cost would be very much enhanced in that way, whereas by enlarging the roadside waste you are not severing a man's property in any way, you are merely withdrawing a little bit?—I think severance is less important if you bear in mind the fact that the railway will very much more follow the contour of the land than it does now. I mean to say that you will not have embankments and cuttings if you can help them, you will run up and down hill rather; it will be nothing more than two fences, as a rule.

31,077. If you go through the middle of a man's field you sever one part of the field from the other?—You do, undoubtedly; but it is not very much more than if you put a fence across it. Then if you go along the road you have got this to face, that the point where you most want room is where you get into the street of a village, and it is precisely there where you cannot take the land.

31,078. I understand you to say that in Belgium they drive these light railways through the villages, even where the roads are quite narrow?—They do.

31,079. Why can it not be done here?—If you will get here the Belgian public sentiment I think you can go along the public roads.

31,080. (*Mr. Dalton.*) These light railways would generally be short railways, would they not?—I should think in most parts of this country a dozen miles, and that kind of thing would be enough.

Speed of light railways.

31,081. Then is speed any object really; is there anything important in the difference between 8 miles and 18 miles an hour in these cases; it is not as if you were going 100 miles?—But it is to be remembered that it is maximum speed, and you have got to submit to all kinds of stoppages. If 12 miles means two hours it is a serious matter.

31,082. The expense would be very much smaller, if you could go along the road; I suppose if you went along the road, it would be practically the cost of a tramway along the road—supposing you had a good wide road?—Yes.

Cost of construction of light railways.

31,083. What is the cost of a tramway per mile on a good country road, under favourable circumstances?—I do not think I could say.

31,084. Would it be 1,000*l.* a mile?—Yes, I think much more than that.

31,085. 2,000*l.*?—I should have thought something like 3,000*l.*

31,086. How do they manage in Belgium to do these railways for about 2,000*l.*?—They do not have, for instance, the tramway rails that we have.

31,087. I was speaking of a tram that would go along a country road; you would not want such rails as you have on other lines?—That is a question again of the Board of Trade regulations as to letting wheels in.

31,088. I was leaving out for the moment the question of regulations, and was referring to the feasibility of using the roads if speed is not much of an object for a short distance, and certainly for a two or three mile railway it would not be a great object. Why should they not go along the road, in the middle of the road, as a tramway does in the ordinary way; that would be very much cheaper than going across country?—Yes.

31,089. You would find, in some parts of the country, that the road was a perfectly suitable road for the purpose, I should think; you would find it broad enough in many places?—Yes.

Mr. W. M Acworth

13 July 1894.

31,090. Would that not be the cheapest way of doing it?—I suppose it would, undoubtedly, be cheaper.

31,091. You seem to lay so much stress upon the pace; I do not understand why: if it is a short distance, the pace is not a very essential matter. If you want to make one of these railways for five or six miles the pace cannot very much matter, whether you are going at eight miles an hour or 18?—I think it makes a great deal of difference from the point of view of the man who is going to use this tram. If he is a man who lives six miles out from his market town, and if he can drive in faster in his own cart he will probably continue to drive in his own cart.

31,092. It will cost him a great deal more?—It may do, but after all the sentiment of the thing counts for a very great deal, and you cannot always reason with a man's sentiments. I think the position is different.

31,093. But do you think that he regards the extra quarter of an hour, or half an hour, as a matter of very great importance?—I should not like to answer that.

Light railways in Naples.

31,094. (*Mr. Elton.*) Among different countries and places that you have seen these light railways in, do you happen to have seen them working in Naples. Do you recollect the steam tram in Naples?—Yes, I do; out to Pozzuoli.

31,095. The reason I asked you was because it seemed to be an interesting example; there they go through the middle of the street?—Yes.

31,096. Down hill or up hill; and it is a rare steep hill?—Yes.

31,097. Though they go a considerable distance there have been no complaints about accidents?—No. But would that not rather be compared with the steam trams which they have in places like Leeds, and Glasgow, and South Staffordshire, which are purely passenger conveyances within the towns.

31,098. Of course, it is rather an appalling kind of steam tram, because it comes dashing down steep hills, at a rate that would please you, I think, and goes right through the streets of the town. But most of the other examples that you mention, I think, were in countries that were, as Mr. Chaplin pointed out, very flat. You mentioned Holland—I am only going to ask just one or two questions to fill up gaps in what you said—of course, that is flat enough, but about the Dutch roads, they are not very broad, are they?—I should have thought not, as a rule, certainly.

31,099. You said they were very much less than the Belgian ones, I think?—I do not think I said that; if I did I ought not to have said it, for I do not know it.

Light railways in Holland.

31,100. I thought you did say they were very much smaller than the Belgian ones. Has any difficulty that you know of arisen from the fact that roads in Holland are, as a matter of fact, very narrow by the side of the canals?—No. I have travelled a good many miles on the Dutch ones, and they always seem to get on successfully, and they are a commercial success.

31,101. Do the light railways run along these roads in Holland, or do they go through the fields?—Any I have been on are on the roads. You can go from Rotterdam to the Hague, and places like that, I think, all the way in tramways instead of going by the main railway.

31,102. And do you know whether the fact of the roads being rather narrow has been found to be an obstacle to the introduction of these light railways on the high roads?—I think it is safe to answer it has not, because they are developing them.

31,103. The instance you gave us is a little deceptive perhaps, because, of course, people must go to the Hague. It is a pleasure place, and there are sure to be tramways to the Hague?—The point there was that two considerable towns—the Hague and Rotterdam—20 miles, or something of the kind, apart, have practically got a continuous country communication in addition to the regular main lines that connect them.

31,104. I am with you, of course, but I wanted to bring out whether there had been any difficulty, because we know the roads are narrow?—No, I do not think there has.

Hungarian light railways.

31,105. You mentioned Hungary; do you know anything about the Hungarian ones; you said Hun-

Mr. W. M. Acworth. 13 July 1894.

gary was something like Wales?—I do not know them except upon paper. I was rather thinking of the sparse agricultural population.

31,106. It has also very flat, remarkably flat, plains?—Yes. I suppose a good deal of the country is so, undoubtedly.

31,107. I suppose when you said "all Europe" you meant a considerable number of important countries, because we need not, perhaps, go into Spain?—In Spain at the present moment the Government is promoting a new law to encourage the railways to extend themselves.

31,108. Railway extensions?—Yes.

31,109. Because they have only got one or two main trunk lines?—Yes.

Belgian light railways and agricultural produce.

31,110. I notice that in this Belgian system it is not so much connected with agriculture as the things that we have been speaking of for England, because I see the plan for these vicinal railways was founded on the idea that they would facilitate intercourse between the rustic towns and the communes, and between them and the larger towns, so that they are to a very great extent not agricultural, but for the purpose of facilitating intercourse between towns; that is so, is it not?—I think the document which I read at the very beginning almost answers that:—"They will furnish "the people with the means of transporting their "products at the lowest possible price. By means of "their junctions with the main railway lines they "will render access to them more convenient both for "passengers and for goods. They will assist communication from village to village, and from the "village to the adjacent station. They will call into "being new industries, and increase the prosperity of "existing industries by affording them new outlets "for their products"——

31,111. It is very nearly the same statement with the change of the station for towns?—"They will "enable the farmer to procure at a cheap rate the "fertilisers necessary"——

31,112. Certainly, that is just where he comes in. In the proposals in the Blue Book it is put boldly out that the lines are to a very great extent for facilitating intercourse between the large towns. It also says at the end that they will enable the farmer to obtain cheaper manure?—Might I comment upon that by saying that obviously it cannot be intended primarily as a means of communication between the large towns because the large towns have already got communication by an ordinary railway.

31,113. Some of them?—There would be no two large towns in Belgium that need a light railway primarily for that purpose.

31,114. The Belgian Government must be responsible for this statement. This is their own statement; they say they think it very desirable to enlarge the communication between these big towns?—Might I put it this way. Primarily you have a line near Namur, or where not, and instead of terminating it in the country district you carry it through the rural district to a second large town.

31,115. I will tell you what struck me on looking at the map, and you will tell me if I am right, that there were two or three objects some of which would be applicable to this country, some of which might not be. For instance, there is the making of a large market town, the market city a centre, and throwing out radii to the different agricultural communes. That is what you would recommend for this country; that is the kind of thing we have been speaking of?—Yes.

31,116 Light railways to facilitate agricultural carriage?—Yes.

31,117. But also it must be remembered - will you agree to this—that in dealing with Belgian lines there is the additional object there of connecting city and city and town and town?—Yes.

31,118. We must not take the Belgian system as applicable *en bloc* to England, but you would suggest that there are parts of the Belgian system which would be found very useful in England?—Whatever may be the advantage in Belgium in connecting two towns 10 miles off or 20 miles off by a new light railway, probably the same advantage would apply if we were to connect two towns in England. I imagine it is for the sake of the development of the intermediate country that you make the steam communication along the line of the high road; that is how I should look at it.

31,119. I do not quite look at it in that way, because, after all, these are Chemins de Fer Vicinaux, and they are not agricultural light railways. They serve a double purpose; they are communications between towns, and they are also intended incidentally to benefit agriculture. I merely ask you whether that would appear to be so on one reading of the map or of the statement that is printed?—I see the point. I do not know that I can interpret a written document any better than anybody else of course.

Mr. W. M. Acworth. 13 July 1894.

31,120. You had a better interpretation from your point of view?—What I read to the Commission was a translation of the official document.

31,120A. The only reason I made the observation was, that you had used "stations" instead of "towns," whereas the official document had drawn some attention to the advantage of making towns communicate together?—I cannot translate the French otherwise. It is "*relations des communes aux stations de chemin de fer.*" If the Blue Book (C. 7356) translates "*stations,*" "towns," it seems to me that the Blue Book is merely wrong.

Light railways and steam tramways.

31,121. Now about the light railways; you rather used that term, I think, as if it meant, as I said just now, a cheap form of railway. All I want to know is whether it would not also take in, in your view, the system of steam tramway such as Mr. Little described?—Undoubtedly.

31,122. You do not wish to confine your evidence to the class of what might be called railways as such, though light, but you would also take in any cognate forms like steam tramways along roads?—If I might answer that in a more general way, I should be extremely sorry that the Commission should take practically anything that I should have said to-day on my authority. I have no right to come here as an engineer, or as anything like an engineer, and no one, I think, could know, with the intimate detail with which they ought to be known, before any serious new departure is taken, all the sides of this question thoroughly.

31,123. No, but my question was, would you wish your evidence to be confined to a thing which would be formally called a railway. I understand that you would include such means of communication as convenient tramways?—What I should like to do is to suggest that the Commission should cause serious inquiry to be made into the whole development of land transport by mechanical means other than first class railways.

31,124. That is more the point?—That is practically what I think it comes to.

31,125. You do not express any definite conclusion on such engineering points, as to whether it should take the form of being more like a tramway or more like a great railway promoting a smaller railway?—That is so.

31,125A. (*Viscount Cobham.*) Is there anything else you wish to add?—If I might just add one word, it is this: I did want to say what Mr. Elton has been kind enough to ask, that I hope the Commission will understand that I do not venture to give my evidence as that of an expert. I think it is more than possible you may find that I have been inaccurate in a great many points. I think that is unavoidable. All I ask the Commission to do is to consider whether there is not a case for making a serious inquiry by much more competent people than I can pretend to be, and much more thoroughly than I have been able to do it. Apart from the personal point—if I might raise a point which has not been mentioned—I think the continental evidence goes to this fact, that the effect of the thing is quite as much moral as material; that the reason the farmer does not send his milk to market now-a-days is not necessarily that he cannot send it, but may be only because it has not occurred to him to send it; and that the effect of carrying railways into districts where they have not been hitherto, has very largely been to stimulate the minds of the people, and cause a moral change quite as much as a material one. It seems to me that the continental evidence, especially the French, raises that point a good deal: that these agricultural lines have had the effect of inducing people to appreciate the changes that have come over agriculture, and to adopt new methods.

31,126. You think it would enlarge the agricultural mind very considerably?—Yes, that is what seems to me is the evidence. The thing ought always to be considered from that point of view quite as much as from the point of view of whether the actual saving in the cost of transport would be sufficient to justify the capital expenditure if you take it by itself.

Mr. W. M. Acworth. 13 July 1894.

31,127. (*Mr. Elton.*) I was not in the least, in any of my questions, attempting to detract from your useful and interesting evidence. I was merely desiring to make it still more useful by trying to divert that part of it which might be urban, and to keep as much as possible to those parts which were in our agricultural department?—I was only afraid of being taken out of my depth. *Mr. W. M. Acworth.* 13 July 1894.

The witness withdrew.

Mr. J. Lousley.

Mr. JETHRO LOUSLEY called and examined. *Mr. J. Lousley.*

31,128. (*Viscount Cobham.*) I think you are a tenant farmer at Hampstead Norris, near Newbury?—Yes.

31,129. And that you are a representative of the Berks and Oxon Chamber of Agriculture, Chairman of the Wantage Board of Guardians, and an Alderman of the Berkshire County Council?—Yes, that is correct.

The Wantage Tramway.

31,130. Before I take you through your brief, I think you have heard the questions asked of the previous witness with regard to the tramway from Wantage?—I have.

31,131. Perhaps you can tell us a little more about it?—I can tell you a good deal about it. That is what I think our light railways ought to be; they ought to be constructed, if possible, in the same manner as that tramway is constructed, and along the road, and, if the road is not quite sufficient, to take in a little bit of land beside it; it would not cost much to go into anyone's field; there would be no severance then. That is how that tramway was done. It runs for three miles from Wantage Road Station up to the town of Wantage, and it is promoted by a company. There is no fence at all, and it pays from 3 to 4 per cent.

31,132. Is it worked by steam?—Yes.

31,133. At what pace do they run?—I should not think they run very fast. I should not think they run more than 8 miles an hour.

31,134. Do you know whether they are limited to 8 miles an hour?—I do not know, but I think they are limited to a certain speed.

31,135. They have a dividend of 3 or 4 per cent. I think you said?—Yes, over 3 per cent. I know.

13,136. Has it proved to be of great value to the neighbourhood?—It is a necessary thing to the town of Wantage, quite necessary. I believe that they do not join the railway, but that the trucks of coal and other things are taken off and run by this engine up the tramway to Wantage.

31,137. Does it take agricultural produce and passengers to any extent?—It takes all kinds of agricultural produce.

31,138. Are there any stations between?—None, and they do not stop.

31,139. How many trains a day are run?—About four or five each way; they meet all the trains that stop at Wantage Road Station, except the 10 o'clock in the morning.

31,140. You do not find accidents on the road?—None at all.

31,141. Stock do not run in the way of the engines?—I never heard of any accident at all. If light railways are carried out, they ought to be carried out on that system. If you go across the fields, and up hill and down dale—I have heard the evidence that has been given here—in my opinion, I believe one thing and another will run up the expenses so that they will not pay.

State of Agriculture in Berkshire.

31,142. Will you tell us the state of agriculture in Berkshire for the past 20 years?—I occupy myself 800 acres, and I began in 1855; 100 acres are my own; the other 700 acres I occupy belong to two or three landowners. When I began in 1855 wheat was very dear, 80*s.* a quarter; now it is 24*s.* a quarter. Of course that is a great deal less.

31,143. (*Mr. Little.*) How many acres of wheat do you grow?—About 120. Labour was very little higher then than it is now; it was higher, but very little. Rents were very much higher, but they are very much reduced. I think I may take it on an average in our hill country—I live in the hill country, though I am quite in the centre of Berks—if you took another place you could not pick another more in the centre of Berkshire. I live in what we rather call the hill country; of course the hill country is a great deal lighter land, and expensive in cultivation, and you do not grow as much corn, as a rule.

31,144. (*Viscount Cobham.*) Is it a good representative Berkshire farm?—Yes, it is a very good representative Berkshire farm. Speaking of rents I not only speak individually, but from what I know as chairman of the Board of Guardians of the different appeals that are brought before us.

Fall in rents.

31,145. How much have rents fallen?—They have fallen 50 to 60 per cent, and in some cases more than 80 per cent. I have known one or two cases where it has fallen more than 80 per cent.

Cost of production.

31,146. You consider the actual cost of production on the whole has very considerably decreased in that period rents having fallen so much and probably feeding stuff and manures?—Yes, and the rates follow the rents, but labour is not so much less; it is less, but it is not very much less.

31,147. With the exception of labour, which remains very much the same, would you say the cost of production was very considerably less?—There is no doubt that it has decreased, but labour is almost at a standstill; it is not much less than it was then. At that time, if I might express an opinion that way, I do not think labour was fairly paid.

31,148. Taking it that the cost of production has considerably decreased, including rents, what about profits?—The profits have been nil since 1879; I think I may say, putting one year with the other, they have been nothing at all.

31,149. Has there been much loss?—We just struggle on. I do not mean to say that we do not nearly get a living, but we just struggled on up till last year, 1893, which was ruinous, for we had neither hay, straw, nor corn.

31,150. Has it ruined many farmers?—A great many.

Vacant farms.

31,151. Are there many vacant farms?—Yes, there are a great many vacant farms. I can name the next parish to mine, where I think nearly the whole parish is about vacant.

31,152. Is it being cultivated by the landowner?—No, by tenant farmers; one by a landowner.

31,153. Is much land absolutely left abandoned?—There are farms to let, but we have really none abandoned. I cannot say that we have a large number of farms to let. One thing that takes off from the large number of farms that are to let is that we have two or three very large landowners with plenty of money, and as fast as farms become vacant they take the farms up. I allude to Lord Wantage and Mr. Benyon.

31,154. They have a large amount of land on their hands?—Yes, and plenty of money to carry it on, both of them.

Condition of tenant farmers.

31,155. But as regards the tenant farmers they have suffered very severely, and many of them have lost all or part of their capital, I suppose?—A good many of them have lost their all and have been obliged to give up; others, as I say, have just struggled on and barely get a living.

31,156. Do you think they are gradually adapting themselves to the position, and will be able to go on now if things do not get worse?—If we should get a good season—I believe we will have a fair one this year—and good crops, they might just exist, because the landlords have met them fairly and well. But I cannot see how there can be much profit, or any profit on wheat at 24*s.* a quarter; it cannot be grown. If you will let the land alone and not plough it or sow it, or do anything with it, why there is no loss, but as soon as you put the plough into it and begin to pay labour, sometimes there is a serious loss.

Position of labourers.

31,157. How has the position of the labourers been affected?—The labourers are a great deal better off.

31,158. Are there as many of them?—No.

31,159. Is there less employment for them?—There is less employment for them, and the villages have decreased in numbers.

Mr. J. Lousley.
13 July 1894.

31,160. In the quality of the labour that is left as good as it was?—It is very good but it is educated, cunning; they are very educated, and they certainly do not do as much work.

Quality of labour.

31,161. (*Mr. Whitehead.*) Do you mean to say that they scamp their work?—I mean to say that if you are not there they do not continue to work as hard as they would if you were there.

31,162. (*Mr. Chaplin.*) Is that the result of education do you think?—I think that is, partly.

Allotments.

31,163. (*Viscount Cobham.*) Is there much demand for allotments there?—No, they have allotments, and they are not half occupied.

31,164. They are provided already?—They have been provided ever since I can remember, and I was born in the village and have lived in the parish now 60 years. There have been plenty of allotments ever since I can remember, and all round too. They are on some of the best land in the village, and close to home, and they are let at about 3*d.* a pole.

31,165. (*Mr. Little.*) 2*l.* an acre?—About 2*l.* an acre, and they have nothing to pay besides; they get half the work done for them; if they have any manure to be drawn up they always ask me to draw it, and if they have any potatoes to bring back, they always ask me to bring them.

Small holdings.

31,166. (*Viscount Cobham.*) Are there many more small holdings than there used to be?—I do not think I can say there are many more; in fact 20 or 25 years ago the small holdings were very much cut up. When farmers were doing well, as fast as a small holding was to let it was added to a farm, since that there have been a few created.

31,167. How have they stood the depression of agriculture?—They have gone the worst. There is no man on a small holding can do except he has from 40 to 80 acres of land and keeps two horses, and does the greater part of the work himself. Those men can just do if they do the work themselves, but if they begin to hire labour, or anything of that sort, they go to the bad directly.

31,168. If they have not some other occupation?—Unless they are innkeepers or something like that.

31,169. Then it would be an accommodation to them to take a small amount of land?—And then work it and do some other business as well, either as innkeepers or as timber carriers.

31,170. You do not know any agricultural labourers who are able to take small holdings and do well by them?—No. We had a man start as a carrier some years ago; he did well as a carrier, then he took a public-house, and he did well with the public-house; then he went into farming and took 80 acres of land, and the poor man failed without a penny.

31,171. (*Mr. Little.*) Are you near the Lambourne small holdings?—No, I am a considerable distance from them—about 18 miles.

Agricultural Holdings Act.

31,172. (*Viscount Cobham.*) What do the farmers thing of the Agricultural Holdings Act, and its working?—We consider it is almost a failure, landlord and tenant both seem afraid to make much of it.

31,173. They do not have recourse to it?—No.

31,174. Why is that?—When the tenant makes a claim the landlord makes a counter claim generally and that frightens them both. That is how it has acted in Berkshire. I do think there should be means found to protect a good tenant against being turned out by the death of the landlord, or by the whim of a bad landlord. At the same time the landlord's property should be protected; as regards so-called improvements, a landlord should have some voice in the matter or the tenant may almost ruin and impoverish the landlord in these times. I think it wants something done different to what it is.

31,175. Do you hold under the Act?—I do not hold under the Act.

31,176. Have you an agreement then?—I have an agreement.

31,177. Which you prefer to the Act?—Yes, I prefer it to the Act.

31,178. Do farmers generally consider the Act expensive to work?—Farmers generally seem afraid of it, and I am sure landlords are afraid of it.

Claims and counter-claims.

31,179. They are afraid of the counterclaim exceeding the claim, and of being put to expense in that way?—Yes, that is what the fear is. Supposing a tenant made a claim they fear that the landlord will make counter-claim, and he ought to have the right to do so I consider. It is just *vice versâ* about that. I have known two or three cases where one has made a claim and the other has made a counterclaim, and it has really come to nothing, simply nothing.

Mr. J. Lousley.
13 July 1894.

31,180. Do you think the claims should be made on the same day?—I think they should. I think a tenant should be paid for any real improvement on the holding, but still I cannot quite understand why a tenant should have power to go and to do anything and everything on a landlord's property without his consent.

Insecurity of tenants.

31,181. Do you think there is much feeling of insecurity on the part of the tenant?—I think that that ought not to be allowed. I consider that a tenant at the present time has the advantage if he is moving or changing his holding or anything, because he can make almost what bargain he likes, except now and then a landlord who has means says: no, if you do not take my terms I will take it in my own hands. But if the landlord attempts to let it, as agriculture is at the present time, the farm will not let, and the tenant can go and make what bargain he likes almost, and I think the tenant has rather the best of it when he comes to make a bargain.

31,182. You do not think that the feeling of insecurity prevents men of capital from coming in and taking land in Berkshire?—Not the feeling of insecurity. I think the feeling of not making it pay is the thing that prevents people coming at the present time.

31,183. That is to say, they look out for the future because of the prices?—Yes, and for myself, I cannot see at all how corn is to be grown at the price; it is an impossibility. Our farms in the hill country, you know, are a great deal larger than they are in the Vale of Berks, around Abingdon and Wallingford. The farms there are only about 300 acres usually, and when you get up higher they are from 500 to 1,000 acres. But if a farm of anything over 500 acres is given up now, I may say that it is an impossibility to let it; nobody will take more than 500 acres.

Low prices and foreign competition caused by increased facilities of communication and transport.

31,184. What do you think the cause of the depression has been?—Low prices—there is not a doubt about that—and foreign imports. It is nothing in the world but steam that has done it. It is a curious thing; of course, we cannot do without it; we must have it, and I am not saying anything against it, but if it was not for steam we should not have this foreign stuff over here; they could not get it across from America, across the sea—and we should not have it.

31,185. Then, as far as that is the case, there is no remedy?—There is no remedy, but that is the cause; at least that is my humble opinion.

31,186. Then the cause is the greatly increased facilities of communication and transport?—Steam and the telegraph have entirely altered it. They could never get it across from America with carts and waggons; if it was not for steam, there it would stay and rot if it liked.

Protection.

31,187. Do you think that any remedies could be adopted to, at all events, mitigate the depression?—There are certain remedies, but of course my real remedy—I do not think you will do any better—and I know it is the feeling in the country that it ought not to be—but I do not think anything will be any good unless it is Protection. I believe Protection is what you may say the only thing possible to keep up prices. We know what the public feeling is, and what is said and done throughout the country; we know the public will not have it; they have set their hearts against Protection.

31,188. That would counterbalance the effects of steam to a certain extent, you think?—That would counterbalance the effects of steam.

31,189. Is that the opinion generally, of Berkshire farmers?—Among all the farmers; I do not think it is among the labouring class. But you see Protection seems such a hard word; it has such an apparent meaning to it that it frightens people. But I do not see why Free Trade should not frighten people just as well, especially when we have not got Free Trade; because we have not got Free Trade. It is all very well to talk about it, but we have not got Free Trade; there is no Free Trade now. How can you call it Free

Mr. J. Lousley. 13 July 1894.

Trade when our land is taxed as it is now, when they are really taxing the food of the people? When I say that, I speak feelingly; I consider that by keeping all these imposts of every description on the land, that it is taxing the people's food. You cannot get the people to believe it, but I believe it.

31,190. As long as Protection is denied, you consider the system of taxing the land should be re-considered?—If Protection is denied to us I consider that in justice everyone ought to move every possible means to relieve the land of all its burdens, and put us, at all events, on the same footing as the foreigner, who has very little charges on the land. If they were to take all the charges off the land entirely, and say, "Now "work your way; you have only got the foreigner to "fight," why, we should not have quite the same power then of saying that we were not used fair.

Duty on flour in relief of rates on agricultural land.

31,191. Who would pay the rates if you do not?—Anybody might, as far as I cared; but still, I have another little remedy, which I do not think even the greatest Radical or free trader, or anyone else ought to object to. I know that several of what I call free traders are of my opinion, and think that it might be done. I think that all manufactured goods ought to be taxed, but I think in common fairness, as these things are, there ought to be a charge, especially on flour. I would not put a high charge on flour—I would not raise the price, but I would put 2*s.* a cwt. on flour, and that would bring in sufficient revenue to pay all the rates; not all descriptions of rates, but rates on agricultural land; I do not mean to say all the rates of the country, because I think houses and buildings ought to be rated, but I do not think agricultural land ought to be rated, and if you were to put this charge on flour it would raise enough money to take the rates off every bit of agricultural land in England. I think that would be one remedy to assist us at any rate. I pay something like 60*l.* a year rates on my land.

31,192. Still it would not go very far towards meeting the depression in Berkshire?—It would not, but then it would remove that feeling of what we consider injustice.

31,193. If you do not pay the rates who is to administer the expenditure of them?—There would be houses you see. Everybody would be rated for his houses and his buildings.

31,194. You would be rated on the farmhouses?—Yes, I should consider it to be only fair to be rated on your house and buildings the same as a tradesman is rated on his house and buildings in a town. I do not think that would be unfair.

31,195. (*Mr. Chaplin.*) But you do not want to be rated on your business any more than a trader is?—I do not want to be rated on my business, on the agricultural land, which produces the food.

31,196. (*Viscount Cobham.*) Have you any other remedies to propose?—I think this tax on flour, as I tell you, would pay the rates. I think that by doing that it would create a great deal more trade at home, the money would be spent in this country in labour and that would be spent again, and by those means the more money there is here, instead of going out of the country, the better it would be for everyone. I can give you an illustration of that which happened in my neighbourhood to a relation of mine. I ask you, did either of you ever know a new water mill erected? That is a curious thing—it is one of the staple trades of our country. In 50 years we have almost doubled ourselves; we have got all these people to feed; they must have flour, and in my whole experience I have never known a new water mill erected, and that must show a bad trade.

31,197. You have known a good many given up?—I have known a good many given up. A miller, a friend of mine, seven or eight years ago, used to work his mill from 1 o'clock on Monday morning till 11 o'clock on Saturday night, and he had two relays of men; what has he done? He said to me about two or three years ago: "Do you know, Jethro," he spoke to me as a friend, "what I have almost made up my mind to do?" (and he has done it), he says, "I am only going to "work from six in the morning to six at night, and "only keep one lot of men, for I find I can buy foreign "flour as cheap as I can make it, and I am deter-"mined," he says, "to buy foreign flour and mix it "with my flour," and he says, "my trade is no worse, "or anything. I can get rid of as much flour. I am "going to buy half my flour, and I am going to do "away with one lot of my men and machinery." And he has too. That is a fact.

Mr. J. Lousley. 13 July 1894.

31,198. (*Sir Nigel Kingscote.*) There is the loss of the bran too, is there not?—Yes, and that loss of the bran through the flour being ground in America, and in India, or wherever it is grown, is very great. If we had it ground in England we should have all that offal to use for our stock, and to assist and increase the produce of our own country again.

31,199. (*Viscount Cobham.*) Your duty on flour would increase the price of bread, would it not?—I do not think it would at all.

31,200. Why not?—Because the wheat would come in free, and we could grind it, or we ought to be able to grind it, and serve it out at nearly the same price as foreigners would do it. I do not see at all why a duty on the importation of flour should increase the price of bread if we have the wheat; what would be the difference?

Land tenure.

31,201. Have you any other suggestions to make?—No, I think not. In fact I am one of those helpless beings that unless we get better prices I do not see what can be done. The real thing that we want is better prices. Then, as regards the tenants; our tenants have had an opportunity we know in 20 years, to change their occupations and get their rents reduced, which a great many have done; but as I tell you, they cannot grow wheat at the price. Some of them—I do not pretend to talk a good deal about land tenure and all those things; but I do not think that would make any difference. That is my private opinion. I do not think anything of that sort would make any difference. They can make a fair bargain now without any of these Acts of Parliament to make bargains for them. I believe they are all independent enough to make their own bargains.

31,202. In Berkshire there are fewer applicants for farms than there are farms, so they are able to make their own terms, is that so?—Yes, and so there is in every county; but I think in Berkshire there are fewer applicants. Then you see there is another thing to counteract. Mr. Benyon is quite willing to take any farm into his hands which falls vacant. He has let one or two lately; but he has as many as a dozen on his hands now. Lord Wantage has a great many more; he has from 4,000 to 5,000 acres in his hands; they have both plenty of money. I know of two farms, one adjoining mine, which has 208 acres of land with a good house and buildings; that farm was bought since I have been in business, in 1860, for a little over 9,000*l.* Now the owner—he was a cousin of mine—having died, the family wanted to dispose of it. They had it put up to auction twice. These 208 acres are in a ring fence, and all they got bid for it was 1,900*l.* That is as good a farm as you want—I may say that 208 acres is all in a ring fence on the level, and a good enough house for anybody to live in; it is only 2 miles from the station, and yet there it is in that way; and they want to sell it because the owner has died and left a family of four daughters. They cannot sell it; the only bidding that they had for that occupation is 1,900*l.*

Decline in value of farms.

31,203. Is that in good condition?—Yes; he was a first-rate farmer, and he has not been dead but two years.

31,204. What is your other case?—The other case is a farm which lies out of the way—that is, near Wantage—it is a farm of 447 acres. There was paid 20,000*l.* for it about 20 years ago—I may, perhaps, explain a little more about that—that was a fictitious price, of course, because it was just in the centre of a gentleman's property. I want to sell it now, and I could sell it to any gentleman here for 3,000*l.*, and if anybody would buy it I would go home pleased.

Land tenure.

31,205. (*Mr. Chaplin.*) I understood from you that no changes in land tenure in your opinion would enable farmers, in Berkshire at all events, to make one whit better terms than they can make to-day for themselves in taking a farm?—I do not think so at all.

31,206. As a remedy for agricultural depression it is out of the question?—I think so.

31,207. You said that the only think you looked to, and I quite understand it, for an improvement in the position is a rise in prices?—Certainly.

31,208. If you could be shown any other way instead of Protection, which would have a tendency to raise

Mr. J. Lousley.

13 July 1894.

prices, I suppose you would be willing enough to accept it?—Certainly.

Currency and prices.

31,209. You have never given attention, I suppose, to what are called currency questions?—I have heard a great many speeches upon it, and I came to London to a conference here, and we have had them over at our conference chamber, but I am almost ashamed to tell you I do not understand it even now.

31,210. I am not the least surprised at that; and there is no reason for being ashamed, I think?—I do not understand it, and I do not know what effect it is likely to have.

31,211. You will be quite ready to take any remedy which you think will raise prices?—I will accept bimetallism or anything else.

Reduction of rents.

31,212. Then there is nothing to be done, I gather from your evidence, in further reduction of rents; because you tell us that in one or two cases you know of they have been reduced more than 80 per cent.?—I do know it. I think agricultural land pays nothing at all in these times without any rent at all.

Duty on flour.

31,213. With regard to your proposal to put a duty of 2*s.* a cwt. on flour; why do you select flour in particular more than anything else; is that because you consider it a manufactured article?—Yes, I would put a tax on all manufactured articles that come in. I have got some foreign matches in my pocket, and I should very much like them taxed—all manufactured goods. I think when the artizans and mechanics are instructed in that, we shall have a wave in our favour.

31,214. I understand that, in your opinion, while it would not increase the price of bread, it would very much decrease the price of another article which is of great importance to the consumer, and that is bran?—It would.

31,215. Bran has risen in price, has it not?—It has very much risen in price, in fact you can buy flour at almost the same price as you can buy bran.

31,216. Exactly, the bran has become as valuable as flour?—Yes.

31,217. One effect of putting a 2*s.* duty on flour would be to lower very much the price of bran in the interest of the consumer?—It would, and it would employ labour, and that money would be spent again in this country; and whenever money flows about you have got a chance of scrambling for some of it.

31,218. Have you anything else to suggest?—I can scarcely suggest anything I am sorry to say. I do not know what to suggest, except, as I say, that Protection seems the only thing to save us, and that is almost impossible. The other thing is to tax all manufactured goods, and by those means to take all the rates off agricultural land.

31,219. Do you grow barley in Berkshire?—A very great deal.

Adulteration of beer.

31,220. Have you ever considered the question of remitting a part of the present beer duty, and raising an equivalent revenue upon foreign barley instead?—No, I have not, but one thing I have considered, and moved at our chamber, and we have discussed it continually, is, that beer should be pure because it ought not to be brewed from other ingredients. When I went to school I learned that beer was brewed from malt and hops, but I think now there is something of everything else in it but malt and hops. Another thing we have discussed, and we feel it strongly, about this beer and other things is, that there is the Adulteration Act. You cannot adulterate any other article but beer, but then they say you cannot adulterate beer; but what is beer but adulterated when it is brewed from sugar and molasses and all that sort of thing?

31,221. You have given us some interesting and, at the same time, some painful evidence. Have you anything else you wish to say?—No, I think not.

Description of his own farm.

31,222. (*Mr. Little.*) You told us you had 800 acres of land, how much of that is arable?—I have only about 40 acres of pasture.

31,223. 760 arable?—Yes.

31,224. You told us you grew 120 acres of wheat, or thereabouts?—Yes.

31,225. What is the rest of the land?—I grow 120 acres of wheat, and we planted on the four field system. It comes in wheat every four years. Then I grow 100 acres of sainfoin.

31,226. That is down for several years, is it not?—That is down for four years, and I keep so much of that down so that you may take that almost as pasture.

Mr. J. Lousley.

13 July 1894.

31,227. That would bring the 760 to 660. Then four times 120 would be 480, what is the rest?—I would grow roots.

31,228. On the four fields system you would grow 120 acres of wheat, 120 acres of barley, 120 acres of clover, and 120 acres of roots?—Yes.

31,229. That makes only 580 acres with the sainfoin?—I grow a large proportion of barley.

31,230. How many acres of barley?—On the average, taking barley and oats together, we consider them together about 160 acres.

31,231. Then you do not stick closely to the four course system?—We never plant wheat except once every four years.

31,232. If you have 160 acres of barley and oats, and only 120 acres of wheat, you cannot have a fourth of your land in wheat?—No, we do not have a fourth, it is about a fifth, is it not?

31,233. Less than a fifth?—I have the wheat once in four years. Then I have 100 acres of sainfoin. If you multiply 120 by four that would be 480, then put 100 on for sainfoin.

31,234. That is 580, and you have got 760?—Then we do not, as you say, stick to the four field system.

31,235. Do you keep the seeds down for more than one year?—Yes.

31,236. Do you grow some beans?—No, we cannot grow beans, but we grow vetches.

31,237. Have you a breeding flock?—Yes.

31,238. How many ewes?—About 350 ewes.

31,239. Do you sell the lambs or keep them on?—Keep them till the next spring—keep them the year.

31,240. Do you keep a dairy?—Only a small dairy.

31,241. Do you winter many cattle?—Not many.

Fall in prices of sheep, wool, and grain compared.

31,242. The price of sheep and the price of wool have both declined very little?—Not sheep. Of course taking the average of years, I cannot say that that has declined very much; wool is not half the price, but sheep, taking the average of years, of course I have known a great deal dearer.

31,243. Barley and oats have not decreased in value greatly?—Last year oats sold well, but then we had none, we had to buy.

31,244. I mean on the average of the last few years, there has not been the same decline in the prices of barley and oats that there has been in the price of wheat?—Certainly not.

31,245. Your loss is principally in wheat and wool?—Wheat and wool and barley have declined, but not in the same proportion.

Decreased production owing to fall in prices.

31,246. Do you consider that there has been a falling off in the amount of produce?—Largely.

31,247. For what period?—About 15 years; since 1879.

31,248. Ever since 1879?—Yes.

31,249. Do you think the land has never recovered from the bad seasons of that period?—I think the farms have been gradually going down.

31,250. From want of manure?—Yes, I do not think they farm so highly as they did.

31,251. Take your own farm?—I was speaking generally of Berkshire; I was not speaking of my own farm.

31,252. I was trying to make out where the loss was, and whether it was partly from a decrease in the amount of produce. Would you say that on your own farm, taking the last ten years, one season with another, the produce has been less than it was before?—It is less, because we have had bad seasons; but we had one or two seasons when we had a good crop even in the last few years.

31,253. You have always been subjected to some bad seasons?—1860 was a very bad one, and 1879 too; they were two awfully bad seasons.

31,254. 1850 and 1852 were bad seasons, were not they?—Yes, but that was in my father's time; that is a little bit beyond me.

Mr. J. Lousley.

13 July 1894.

31,255. Do you think there have been more bad seasons in the last 15 years than before?—I do.

31,256. Speaking generally, would you say that the produce in your part of the country has diminished considerably since 1879?—Yes; besides the bad seasons.

31,257. Partly owing to bad farming, would you say?—The farming is the cause of some of the shortness of crop, for the reason that some have not got the money to spend; others that have got the money are very careful how they go and lay out a pound upon the chance of getting only 18*s.* back again.

31,258. Then the low prices, and the continual fall in prices, have operated to prevent farmers spending money?—They have.

31,259. And so the produce has fallen?—It has fallen. You can see what I mean by that, which is that when we used to give our sheep corn 20 years ago, when barley was at 42*s.* a quarter, and wheat at 60*s.*, if we got a sack or two sacks an acre more, we got it at the rate of 42*s.* and 60*s.*; now if we get a sack to the acre more, or a quarter to the acre more, we only get it at the rate of 24*s.* and 28*s.*, which is what the barley is. You see it does not pay us to go to the same expense as regards feeding as it did.

Farming at present prices.

31,260. (*Sir Nigel Kingscote.*) Do you think in the present state of prices that you can farm too well, that is, lay out too much money on your land for the return you get? If you farmed moderately well would you get a better return in proportion?—I think that there is not a doubt that a moderate way of farming would be more likely to yield a profit or return than excessive high farming would. As I came up this morning by the Great Western Railway, I saw a few pieces of barley and wheat; and I should think they are almost all spoilt by the rain.

31,261. (*Mr. Dalton.*) What is the union in which your farm is?—Wantage.

Rates on his own farm.

31,262. What are the rates in the pound now, altogether, that you pay on your farm?—Do you mean the poor rates?

31,263. What do the poor rate, the county rate, and the highway rate, come to altogether?—They go together; we pay the county rate from the poor rate.

31,264. Do you pay the highway rate out of the poor rate?—No, for that our parish is separate.

31,265. What do you pay for the poor rate then?—We pay about 1*s.* 3*d.* in the pound.

31,266. And for the highway rate?—From 9*d.* to 1*s.*

31,267. Is that less or more than it used to be?—Less.

31,268. It is less, although your rent has gone down so much?—Yes, very much less.

31,269. You, I presume, are paying less, on the whole, in rent?—A very great deal less on the whole.

31,270. Has there been a great fall in the rent?—Yes.

31,271. And yet there is a fall in the rate in the pound of the rates; how is that?—I do not quite understand your meaning.

31,272. You are paying now 2*s.* in the pound in the rates, whereas the average rate for Berkshire was more than 3*s.* a few years ago, and in the meanwhile your rateable value has decreased; how does that come about—what has caused the fall?—We do not give as much out-relief. I am chairman of the board of guardians, and therefore I know.

31,273. You have economised?—We have economised a very great deal. We do not give so much out-relief, and, of course, that has reduced the rates very much, for people will not go into the house; they are better off than they were.

31,274. And you have got also a good deal of assistance from the Government in aid of rates?—Yes, we get a great deal of assistance from the Government.

31,275. You are very much better off in that way than you were in 1871?—Yes.

Burdens on land abroad.

31,276. You seem to be of opinion, I think, that there are very few charges on the land abroad?—I am.

31,277. Have you ever read Mr. Goschen's report on Local Taxation in 1871?—No, I have not.

31,278. He says, "The burdens on land," that is in England," "are not heavier than they have been at "various periods of the century, nor as heavy as they "are in most foreign countries." It was in 1871 when he wrote that?—Did he take America?

Mr. J. Lousley.

13 July 1894.

31,279. I cannot say; he says "in most foreign countries"?—When was that?

31,280. In 1871?—He was a Radical then.

31,281. If they were not so heavy in most foreign countries in 1871, and they have fallen a great deal since, I do not quite see how we are in a worse position in the matter of the burdens upon land than other countries are?—I do not think your quotation is quite a fair one. When he said most countries. I should think he meant such countries as France or Germany, or some countries like them. I do not think it is the case in the countries I allude to, mind you.

31,282. Do you know what the burdens are in America?—Very little. You can go and get the land there for nothing; I think they have got to pay something, but you can go and get it practically for nothing. Go and take America, take the Argentine Republic, take India; I do not think their burdens are very heavy, and it is those countries that are our ruin. It is not France, or any of the European countries; it is America and Australia, and such countries.

31,283. But your rates are much lighter than they used to be?—Decidedly.

31,284. (*Mr. Little.*) Do you, in your union, take rent as the basis of value?—Yes.

31,285. Then, when a farm is greatly reduced in rental, you reduce it at the board of guardians?—We do as near as possible, but I will not say that we go to the exact sum.

31,286. You take the circumstances into consideration?—We consider them a little, but it is very little; the rent is the basis.

Profits of barley growing.

31,287. (*Mr. Whitehead.*) Does barley-growing pay in your district?—It pays better than anything else; ours is a barley country.

31,288. Then it still pays to grow barley?—I think it does.

31,289. Notwithstanding the large importations?—Yes, notwithstanding the bad barley; and then the beer duty, and one thing and another knocks the price off the best.

31,290. Have you heard that brewers are buying the foreign cheap barley at about 18*s.* a quarter for malting, and are using it and finding that it answers their purpose?—I have heard they do buy foreign barley, but I did not know they could buy it fit for malting as low as 18*s.*

31,291. You have not heard that lately?—No, I have not heard that lately.

31,292. Would you be surprised to hear that that is the fact?—No, I should not be surprised at anything as regards foreign produce.

31,293. I am afraid that will reduce your profits on barley growing, if that comes to pass?—Yes, I am afraid it will.

Agricultural education in Berkshire.

31,294. (*Viscount Cobham.*) Are you doing any good in Berkshire with your technical education grant?—We are spending the money.

31,295. I want to know whether you are doing any good?—We are doing the best we can. I am an alderman on the County Council. They will not allow us to apply it to the rates, and we rather wanted to apply it to the rates.

31,296. Have you a dairy school?—Yes, we have a dairy school, and we give so much to bee culture, and yesterday we had a competition in farriery at Newbury; I went and saw it.

31,297. Are there agricultural lectures?—There have been, but they are not kept up. We give a certain number of scholarships to sons of farmers; we give 50*l.* a year to assist them in their education at some selected school; they go down to Aspatria in Cumberland; I think we have ten of those. Then we have 50 scholarships of 10*l.* a year for the boys in the elementary schools.

31,298. You spend most of your money in fact on scholarships?—We spend a great deal on them.

31,299. (*Mr. Little.*) Do you find much competition for the 50*l.* scholarships?—No.

Mr. J. Lousley. 13 July 1894.

31,300. Not much?—Not much.

31,301. But they are filled?—They are filled.

31,302. By whom—sons of farmers chiefly?—By sons of farmers.

31,303. Is it confined to sons of farmers?—Yes, that is confined to the sons of farmers, but the scholarships for the boys in the elementary schools are given after an open competitive examination.

31,304. (*Viscount Cobham.*) Did the agricultural lectures have good results?—No; we thought it was an entire failure.

31,305. And they are not kept up, I think you said?—Yes.

31,306. (*Mr. Whitehead.*) Is yours a dairy country?—Part of Berkshire is—down in the Vale. Where I live is not a dairy country, but down by Wallingford and Wantage—Wantage especially, and round by Goosey—it is.

31,307. (*Viscount Cobham.*) Do you think better means of spending this money for the benefit of agriculture could be adopted?—No, I do not think so. I have tried to think it out, but I do not see any better mode of expending it.

Fall in rents.

31,308. You have spoken of the fall of rents; do you know of any case where there has been a very serious fall?—I know a farm where the rent has fallen from 370*l.* down to 70*l.* in 20 years.

Instruction in dairying.

31,309. (*Mr. Gilmour.*) How did you conduct your technical instruction in dairying; on what lines?—We have a lady as an instructress, and we get so many pupils at certain centres. They go round, and perhaps go to one village one day and to another village the next week, and so on. There are a certain number of pupils, about eight or 10 for each class; they give them a week's instruction, and then they have a competition to see which can make the best buter, and there is a prize given always. If sufficient enter for a second class, they go on there the next week and have another competition.

Mr. J. Lousley. 13 July 1894.

31,310. Have you considered the benefit that would arise from sending a proper instructress to certain farms in order to let the people see, with their own implements, how to make the best butter?—No, we have not thought about sending them to people's farms. We have all the implements and everything at these dairy schools for people to go and see. It has been on now some two years, and a few of our people have followed it up since; my daughter did for one—she has followed it up, and certainly the butter is a very great deal better; it sells better, and makes more money.

31,311. Then they get a better price for butter made on those principles?—They get from 1*d.* to 2*d.* per pound more.

31,312. That cannot be known perhaps amongst the others?—It is pretty publicly known.

31,313. It is known?—Yes, it is.

31,314. Yet they have not the energy or emulation to try and carry it out?—At first it was looked on somewhat coldly; a good many would not go; they would not trouble about it; but since that has been known, and people have found out it does make better butter, and sells better—keeps better in fact, I think that is what you can say of it more than anything—there has really been competition as to who should enter the classes, and wherever we go we have plenty of candidates.

The witness withdrew.

Adjourned to Thursday next at 12 o'clock.

Fifty-fourth Day.

Thursday, 19th July, 1894.

PRESENT:

The Right Hon. GEORGE JOHN SHAW-LEFEVRE, M.P., in the Chair.

Viscount Cobham.
The Right Hon. Henry Chaplin, M.P.
Sir Robert Nigel Fitzhardinge Kingscote, K.C.B.
Robert Giffen, Esq., C.B.
Captain Owen Thomas.
John Clay, Esq.
Cornelius Neale Dalton, Esq., C.B.
Robert Lacey Everett, Esq., M.P.
John Gilmour, Esq.
George Lambert, Esq., M.P.
Charles Whitehead, Esq., F.L.S.

Herbert Lyon, Esq., *Secretary.*
R. F. Crawford, Esq., } *Assistant Secretaries.*
Freeman Thomas, Esq., }

Mr. J. Wilkinson. 19 July 1894.

Mr. Joseph Wilkinson, Keepwick, Wall-on-Tyne, called and examined.

Mr. J. Wilkinson. 19 July 1894.

31,315. (*Sir Nigel Kingscote.*) You are a tenant armer, I believe, and you represent the Newcastle Farmers' Club?—Yes.

His own farm.

31,316. About what number of acres do you farm?—I farm about 900 acres. One farm has 500 acres, and the other rather over 400 acres.

31,317. How long have you occupied them?—One, the lesser farm, I have occupied for 31 or 33 years. The other, an adjoining farm, I took 10 years ago.

31,318. Are you a native of the county?—I have lived on that estate, and my father, and grandfather before me, for 120 years.

31,319. What sort of farm is it?—The most of it is grazing land. I think under the agreement there are about 200 acres arable land, but I only cultivate about half of that, or a little more. The other is fairly good pasture land. The grazing land is in a rather high situation.

31,320. Is there arable land upon each of the two farms?—No, only on the larger one of them.

Depression in his district.

31,321. Has the district in which your farm is situate suffered from agricultural depression?—Yes, it has, very much so. We have been passing through a period of greater or less depression since 1878. For a year or two—1883, 1884, and 1885—when we had rather good stock prices that saved us then, but since then we have been suffering very severely. We had not such a bad year in our part as you had last year in the south of England, but still we suffered very much from falling prices.

Fall in prices.

31,322. You consider the falling in prices of agricultural produce to be one cause of agricultural depression, do you?—Yes, and bad seasons and in-

Mr. J. Wilkinson.

19 July 1894.

creased cost of labour on the land, and damages from game, and the effect of the Agricultural Holdings Act.

31,323. Take the first cause of depression, falling in prices; what have you to say on that point?—I think it is generally recognised and admitted that they have fallen to a very considerable extent.

31,324. Can you give us any figures to show it?—The fall in the price of wool from what it had been previous to 1878 has been probably 50 per cent.

31,325. Are there any other things?—The price of corn has fallen very materially with us; more particularly is that the case with reference to barley, the fall is rather over 40 per cent. in regard to it. I may say that very little wheat is grown in the district that I represent here.

31,326. As regards stock generally, cattle and sheep, what do you say?—We have had a fall in the price of both beef and mutton—a very serious fall. I may say that up to 1878 for a number of years we had generally mutton selling from 9*d.* to 10*d.* a lb., and beef from 8*d.* to 8½*d.* and in some cases 9*d.* a lb. During the last two or three years, and more particularly during this last winter, we have scarcely had 6*d.*—5½*d.* to 6½*d.* it has been for beef; sheep, 7*d.* to 8*d.* on account of the drought in the south last summer. I think we have an advantage in the North at the present time in the price of sheep, on account of the severe disaster that happened in the south of England last year, and sheep sell rather better in proportion than fat cattle.

31,327. (*Captain Owen Thomas.*) Do you speak of the retail prices as well?—Merely the prices we sell them at in the fat market.

31,328. (*Sir Nigel Kingscote.*) Which is your chief market?—Newcastle-on-Tyne. I may say I buy and sell the whole of my own stock, and I am a regular attender on the cattle market.

31,329. (*Mr. Clay.*) What per cent. has the price of cattle fallen?—We had 6½*d.* a pound up to last month. That is rather over 30 per cent. fall, and I may say, in dealing with the cattle question, that store cattle somehow or another are not found in proportion to fat cattle.

31,330. (*Sir Nigel Kingscote.*) Do you mean store cattle have kept up higher prices?—Yes. I think I may explain it to a great extent in this way, that in Northumberland we depend upon Ireland for a large quantity of grazing stock, and from some circumstance or other they send us a very much larger number of fat cattle, instead of lean ones, than they used to do.

Remedy for fall in prices.

31,331. Do you see any remedy for these low prices? Do you look for better prices in the future?—No, I cannot say that I do. Honestly I must state that fact. Of course, circumstances may arise in the future to alter it, but I cannot see myself that with cheap steam navigation and an increased quantity of food being brought here that there is any particular prospect before us, barring barrenness and calamity.

Reciprocal free trade.

31,332. Do you think free trade has anything to do with it?—I am of opinion that the fiscal policy of this country should be reconsidered, with a view to securing genuine free trade. The hostile tariffs of other countries have done a great deal towards depressing the prices of agricultural products, as well as other things, and we ought in our own interests, as well as in the interests of humanity, to arrange our tariffs so that we might be in a position to bargain with other countries for reciprocal free trade. The conditions affecting commerce have undergone great changes since our present system was instituted, and we should therefore reconsider our policy by the light of these changes.

31,333. Does that mean you would like to see the country return to the system of protection?—No; honestly no. I am not in favour of the policy of protection. I do not think it is suited to this country, but I think we have surrendered too much without getting anything in return.

31,334. Have you any remedy to apply in that respect?—It is just a question as to how far we should buy certain articles from foreign countries with the present duty upon our manufactures. What I hold we are suffering from is the fact that the fall in the price of agricultural produce is putting an end to a lot of land cultivation. It is driving the labourers into the towns, but they cannot all find employment there because all the manufactures are being taxed by other countries.

31,335. Would you like to see a tax put upon an article like flour?—No; I do not think that with the large population we have to provide for it could be very honestly recommended.

Mr. J. Wilkinson.

19 July 1894.

31,336. In addition to the falling prices, you have had bad seasons as causes of depression?—Extremely bad seasons, and I may say that two or three of those seasons have been more disastrous to us than these falling prices.

Bad seasons.

31,337. Have you anything to say as regards the increasing cost of labour?—I would like to draw the attention of the Commission to the bad seasons. The loss from bad seasons has not been merely a simple and direct loss resulting from damage to crops, and that sort of thing; there have also been complex and indirect losses, arising in this way:—The fall in prices took place in respect to corn at an earlier period than it did in respect to beef and mutton, and consequently when corn growing became unprofitable, farmers thought it good policy to sow away as much land as possible to permanent grass. But it so happened that this transition period occurred during the bad seasons when it was difficult to work the land properly, so consequently much land was sown away in bad condition. The increasing cost of labour and the unsatisfactory conditions of tenure would help to accentuate this evil by deterring the farmer from doing the work as thoroughly as he ought to have done it. I think I might say in dealing with bad seasons that it is not only the corn crops that they have had an effect on, but I believe they have had more effect upon live stock. Some of these excessively bad seasons reduced the produce of all our sheep flocks, and left them in an extremely bad condition as to a good deal of them, and there was more waste and loss arose in connection with them in the North of England than was estimated to be the case. Take, for instance, if you will, the regular cost of a sheep farm. You have an immensely smaller quantity of sheep than you can sell at the higher prices, and a very much larger quantity than you can sell at the lower prices, than ought to be the case if there was a just proportion maintained between them. In the year 1886–7 the corn crop was lowest, but it was also very bad in the year 1892.

Increased cost of labour

31,338. Then you think that the causes of agricultural depression, from falling prices and bad seasons and increased cost of labour, are very much bound up together?—Yes. With respect to labour the cost is greater. A certain class of it is getting more difficult to get.

31,339. Do you mean the quality of work?—No, a very large quantity of the field work in Northumberland has been done by women up to a year or two ago. That class of labour is more or less disappearing. I think women were probably not over well paid, but we have now to do more work with men, and it costs us more. I may say I come from a district of England where we have the highest paid agricultural labourer in England. A good many men have 1*l.* to a guinea a week, and 18*s.*, 19*s.*, 21*s.*, and so on; and there are free crops of potatoes that the family will use, and there is regular employment.

31,340. Do you agree with what was said by one witness from Northumberland here, that taking everything into account they got from 23*s.* to 25*s.* a week?—I think that is rather high, but it depends on what you value your house rent at.

31,341. Would that be 1*s.* 6*d.* a week?—Yes, but I might say with respect to my district, that wages are slightly higher in the portion of the county that I come from than that which Mr. Scott represents. We are nearer hand to the great coal districts, and there is a tendency for the men to go there. We are nearer hand to the great mining centres than are those that Mr. Scott represented, and our younger men leave us very much on that account.

31,342. Do you think at the present moment that you are paying more per acre for labour than you did 10 years ago?—Yes, slightly.

31,343. And the quality of that labour is no better, is it?—It is no better, but I would not like to say it is any worse. I do not think we can mend matters by interfering with our labour. I find no fault with it. It is as good as anybody has in any other county.

Land badly laid down to grass.

31,344. Then as regards the land, are you of opinion that a good deal that has been laid down to grass has been injudiciously laid down?—I do not think it was injudiciously laid down, but it was a matter of necessity. It could not be farmed so as to pay at the prices corn and labour were at after 1874–1875.

Mr. J. Wilkinson. 19 July 1894.

31,345. But otherwise you would not have put stock upon the land, which is now partly carrying stock and is partly laid down. Is that what you wish to say?—For instance, to enlarge upon what I have already said, the fall in the value of corn was much more felt by the farmer on inferior land than on the better sorts of land, and consequently it was the inferior lands that were mostly sown away for grazing purposes. But the fact of their being of an inferior quality rendered these lands much more difficult to sow away satisfactorily, and when they had become pastures caused great difficulty in getting suitable stock for them. I am sure that great losses have occurred amongst stock that have been put on to land for which they were unsuited. Moreover, the description of fat stock produced on these inferior pastures has turned out to be just the grade that has most suffered in price from the competition of foreign meat.

31,346. What do you mean by that?—Meat imported from abroad. Meat from abroad competes mostly with the second-class produce of our own country.

31,347. The produce is not good enough to make it pay to fatten it?—No, not sufficiently good; and I say that that land, in respect to its management, has led to a good deal of misfortune in Northumberland. That land was laid away to grass, and a good deal of loss from sheep stock has taken place upon it from bad seasons.

31,348. You mean it was not really suitable to carry sheep?—Not at the time it was done, but probably I may say that with a plentiful application of artificial manures, such as slag, superphosphates, a good deal of that land has been brought into better condition.

31,349. (*Viscount Cobham.*) Was it laid away without corn crop?—Mostly without corn crop, but I do not think that made any difference. It was not well laid away, and the result has been that we have suffered from very severe loss from the land. It may not be important, but I do not think it is the tenant's duty to make the land better than it is without being paid for it.

31,350. (*Sir Nigel Kingscote.*) What is your idea as to what should be done? Do you expect the Government or Parliament to alter the nature of the seasons or the character of the land?—I may just give you what I think should be the remedies. The tenant farmers of my district are quite prepared to contend against adverse seasons if they had fair play against foreign competition, freedom from cattle disease, and proper security for improvements on their farms.

Reciprocal free trade.

31,351. I do not quite understand what you mean by fair play as to foreign competition?—That is, with respect to the question of free trade. Really the principles of free trade are best if Parliament can use any efforts to secure them to us. It is only one-sided to say as far as our manufactures go, they are going into the hands of manufacturers abroad. I know, as a fact, that on the banks of the Tyne industries are entirely disappearing for that very reason.

Marking of foreign meat.

31,352. Do you wish anything done as regards the marking of foreign meat or foreign produce?—I must say there is a difficulty in this marking of foreign meat. It will be difficult to follow out, but I think it might be met to some extent by a provision that any man selling foreign meat should have to put up a notice to that effect upon his shop. It is a difficult thing to mark every joint of foreign meat.

31,353. Would you have a man take out a licence before he could sell it?—I think that many men sell it, and if they had to put up a notice that foreign meat is sold here, a good many customers would never enter their doors again. They have it now smuggled in under the name of something else.

Railway rates.

31,354. Have you anything to say as to the railway companies?—Yes, I have a good deal to say with respect to them. I think the railway companies by increasing the speed and giving greater facilities send foreign produce to the great centres of population, and so give an unfair advantage to foreign dealers; and by becoming owners of shipping as well as owners of docks, they evade the Act of Parliament which meant to give all equal rights. I believe evidence could be produced that the shipping charges from a foreign country to a home port are practically nothing. They could not carry much if they were shipowners alone, but combining the two occupations they do a great deal to our prejudice.

31,355. What are you alluding to now?—To railway companies.

Mr. J. Wilkinson. 19 July 1894.

31,356. But I mean what is being carried by them—is it wheat or live stock, or what?—I will take an instance communicated to me a few days ago: "From "many ports of France—Honfleur, Cherbourg, Caen, "Lisieux, &c.—eggs are being landed at Southampton, "and conveyed thence 78¼ miles by rail at a total "charge of 25*s.* per ton delivered, or 5 cwt. for 6*s.* 3*d.*"

31,357. What are you reading from, because we want your evidence. Is this from a newspaper, or what is it from?—It is from an article published by the Mansion House Association on railway and canal traffic.

31,358. If you could give us any evidence of your own it would be better, because we can only take that?—I only have general evidence on the matter, that articles are brought by ship from foreign countries and landed in the centres of population in England at a rate such that the parties carrying them get little or nothing for shipping charges. The Act of Parliament should give equal rights to the British producer.

31,359. You mean that native goods ought to be carried as cheaply as foreign goods?—Yes, they ought to be compelled to charge the same rates as shipping companies. I think they have evaded the Act of Parliament by becoming the owners of docks and ships, and I think that no railway company should be an owner of ships or docks. I wish to bring before the Commission that much of the land gone out of cultivation will not be brought under the same system again as it has been, but will be manipulated by a different class of cultivators who might be attracted, such as dairymen and producers of various classes of garden produce, and also small holders for breeding young stock, all of whom will do a great deal of work themselves by means of their own families; but their produce must be placed on the market with cheapness and speed, and if the railway companies nursed British industries as they have been nursing foreign ones, our position would not have been so serious. I know from my own case that they can bring butter from Denmark and land it in Newcastle as cheap as I can land it 25 miles away from my place by rail.

31,360. You know that of your own knowledge, do you?—I know that of my own knowledge.

31,361. And you think that the Legislature ought to step in and make the rates more favourable to the agriculturist?—No, not more favourable; but I say that the railway companies ought not to have the power, by using shipping, and charging little or nothing for shipping rates. They charge practically nothing for shipping. They land eggs and other produce from Southampton to London from France at a cheaper rate than they will charge for landing them in the neighbourhood of Southampton. That is the effect of the evidence given already, I believe.

31,362-3. (*Viscount Cobham.*) If foreign produce is carried cheaper than home produce it is against the law, so why do not people who suffer from it take action themselves?—A small man is not exactly fond of going to law with a railway company, who will take him through all the courts of the realm up to the House of Lords.

31,364. But you have Chambers of Agriculture, have you not?—Yes, and we are acting through the Mansion House Committee, and we know the difficulties they have in dealing with that question, let alone an individual. I hold that the railway companies are the greatest enemy of all to the agriculturalist.

Losses of tenant farmers from cattle disease.

31,365. (*Sir Nigel Kingscote.*) Now, have you finished upon that subject?—I do not think the loss which the tenant farmer has suffered from cattle disease has been properly estimated. I may say I commenced as a farmer, when the cattle plague first appeared in the country.

31,366. Did you suffer from that?—Indirectly I did. I will go to this extent, in the Newcastle market I was once selling my own stock in the market, and a cattle man was standing next to me, and I asked him where he had brought his cattle from, and he said from Hungary from the Austro-Hungarian Empire. I said, "Why do you bring them here?" and he answered, "They are all dying at home" and the result was we were compelled to send our own away after we had been standing in the market. People got out of cattle at that time.

Mr. J. Wilkinson.
19 July 1894.

31,367. But that is many years ago?—30 years ago.

31,368. And that cannot occur now?—I understand we are dealing with the causes of depression before we come to the remedies.

31,369. Quite so?—I may say that the cattle disease spread over Cumberland and Northumberland, and it destroyed the breeding stocks of many farmers, and we are not always in a position to replace them again.

31,370. What do you say as regards the present state of affairs?—We have had foot-and-mouth disease again, and that has done us a great deal of harm. I may say that I have had experience of both foot-and-mouth disease and lung disease. The losses to the agricultural community and to the nation during the last 30 years from contagious diseases in animals have been enormous. Not only the actual loss from disease has to be considered, but also the loss arising from the necessary local restrictions on the movement of stock when disease is prevalent, which entailed great sacrifices on the part of farmers; and the losses entailed by the changes in farm management, which the prevalence of disease has rendered necessary. These losses have fallen with peculiar severity upon the smaller farmers, who in many cases are breeders of stock, and their interests ought to be considered in dealing with this question. Then before the present laws were enacted for the suppression of disease, the breeding of cattle was seriously curtailed by the actual destruction of breeding herds and from fear of further losses by disease, and even now a full feeling of security is not established, as we never know the moment when fresh disease may be introduced by the removal of restrictions on the importation of foreign cattle.

31,371. Do you think that applies now?—There is not so much danger now as there was, but I am drawing the attention of the Commission to the great difficulty that exists now with regard to it. In my opinion it would be wise to pass an Act of Parliament permanently excluding the importation of cattle from abroad except for the purpose of slaughter at the port of debarkation. This would create a sense of security, and breeding of cattle would be so encouraged that an ample supply of home-bred animals would soon be forthcoming to meet all requirements. The present state of uncertainty creates an additional evil, because home breeding is discouraged by the possibility of foreign competition, and yet foreign store or lean stock do not come in, and so store stock are scarce and relatively dear, and the occupation of the farmer who feeds or fattens stock is rendered more or less unprofitable. It does not lead people to go in for breeding as they ought to do. I think it ought to be fairly decided that we may not have lean stock come in for a period, and then be stopped two or three months.

Slaughter of imported cattle at ports of landing.

31,372. I gather you would like to see the importation of live stock from abroad prohibited?—Yes, except they were to be slaughtered at certain fixed parts suitable to the requirements of the manufacturing districts.

31,373. And do you consider that all over Great Britain stock can be reared in sufficient quantities to supply the demands of those who want stock?—I have not the slightest doubt about it. As to the possibility of feeding foreign cattle, that only applies to counties in the position of such counties as Fife and Forfar and one or two other counties in Scotland. I may say that I am a feeder myself, not a breeder, but I hold strongly to the opinion that we cannot secure satisfactory breeding at home except under different conditions from those which at present prevail, and the conditions ought to be different if we are to be safe for the future.

31,374. That is to enable you to get immunity from disease?—I think it would be best in the interests of the whole country that dead meat might come to suit the working population in any quantity, and I wish to draw this to the attention of the Commission, that it has always been said that by interfering with cattle importation we are increasing the price of meat; but it is the fact that since the cattle disease was dealt with we have had meat cheaper and cheaper, so that it does not follow that we are going to increase the price of it in tha way.

Rates and taxes.

31,375. Now what have you to say with regard to rates and taxes?—I think the effect of legislation is largely to increase rates and taxes, and they ought to be divided between landlord and tenant in England, as they are in Scotland. I think it is grossly unfair that the English tenant should pay income tax upon one-half of his rental while the Scotchman pays upon one-third. I do not know who the genius was that invented the idea that half a man's rental was profit.

Mr. J. Wilkinson.
19 July 1894.

Security or improvements.

31,376. What do you wish to say about a security for improvements?—I regard it as an imperative necessity that the Agricultural Holdings Act should be amended; and in suggesting the lines on which amendments should proceed I would just like to say, in passing, that I have no desire to see any injury done to the landowners. The legislation we seek for is merely intended to put a stop to injustice, and keep up to the mark the owners of badly managed estates. Such legislation would be to the advantage of the honest owner, and would promote the interests of the community at large. I think, then, that for the purpose of making permanent improvements the landowner should be entitled to borrow money from the State at a low rate of interest. I have had some practical experience in that respect. On the two farms that I occupied there have been 1,800*l.* spent upon them this last 15 years.

State loans for improvements.

31,377. On improvements?—On drainage, buildings, and other things. That money cost 7 per cent. or something near that.

31,378. (*Viscount Cobham.*) Do you pay the interest on it?—Yes, I pay it every year.

31,379. (*Sir Nigel Kingscote.*) Do you know how it was borrowed?—It was borrowed from the Land Improvement Company, and spent in drainage and other things, and I say, if that money had been borrowed at 4 or 4½ per cent. it would have been a practical commercial transaction and might have done good, but at the rate it is borrowed at it is simply impossible to spend it profitably.

31,380. Do you think that if money was lent at a less rate of interest improvements could be made, and would be made more than they are now?—It would be profitable, and I think a good deal could be done in the North of England in the way of drainage and building of cottages for small holdings.

31,381. (*Viscount Cobham.*) Is it the usual practice to charge the whole of the interest and sinking fund?—In my case I did. I paid the whole of it myself, and I think it is done so in most districts.

31,382. (*Sir Nigel Kingscote.*) You, as tenant, have paid the whole?—I paid it up to a few years ago, but I am taking my farms at a reduction. There was a difficulty in getting a reduction, though the high interest had to be paid out of the rent.

31,383. But has money been borrowed for the farm on which your father and grandfather worked for so many years?—There will be some borrowed on one farm, but I am not occupying the same farms altogether. My farms are on the same estate, but they are not exactly the same farms.

Interest of life owners in their improvements.

31,384. Then what do you say as regards improvements?—I think it highly desirable that owners of estates who are only life tenants should be entitled to the absolute ownership of all improvements which they may make on their estates. I have known instances of farms which were placed at a serious disadvantage from want of improvements, just because the owner had only a life interest in the estate and so did not feel disposed to spend money on it. I may say that I live upon one of these estates at present. It passed into the hands of a non-resident owner and he is dead, and it now belongs to I do not know how many people, and they none of them will do anything but collect the rent.

31,385. Would you allow the tenant to make what is called improvements without the consent of the landlord?—In certain cases, if it were suitable to the holding, I would.

Compensation for improvements.

31,386. How about compensation at the end of the tenancy?—I am strongly of opinion that the increased fertility of the soil due to continuous good farming should be the property of the tenant. The operation of the law as it stands, by which an outgoing tenant only receives compensation based on the quantities of artificial fertilisers and feeding stuffs used during the last three or four years of his tenancy, is not a sufficient recognition of his interests in the soil. Indeed, the law operates in a way quite detrimental to the farmer who practices continuous good farming, because such a farmer is liable to a demand for an increase of rent owing to the increased fertility, and consequently

Mr. J. Wilkinson.
19 July 1894.

increased rental value, which he himself has brought about by the expenditure of his money, and the application of his knowledge, skill, and industry to the land. Of course, it would be equally fair, and I think very desirable, that the owner on his part should be allowed compensation for decreased fertility due to bad farming. Under the present Act an owner cannot make a claim unless the tenant has first done so. The Act may, therefore, be said to offer an inducement to bad farming by opening the door to unscrupulous persons, who would take a farm in a high state of cultivation for the purpose of running it down in condition and taking all out of it they can get. To protect themselves against this sort of thing owners are compelled to insist on agreements, the conditions of which are in some cases most oppressive, and calculated to seriously impede the operations of the honest farmer. It is nowadays more than ever essential that the farmer should have the greatest freedom in cropping, in the sale of his produce, and in the general management of his farm.

Agricultural Holdings Act.

31,387. What do you wish to see enacted?—We wish to see an improved Agricultural Holdings Act, that will give us the full value of our improvements and secure good management for a number of years, at the same time giving the landlord proper security for deterioration.

31,388. You consider the present Agricultural Holdings Act is not good enough?—It is not worth the paper it is written on. I may say I have had a claim under it, and I have dealt with it in several cases under an arbitrator, and the amount you get is scarcely anything.

31,389. Have there been any references under the Agricultural Holdings Act in your district?—Not a very great deal. I believe I had the first myself that ever was held in the county of Northumberland, and I may say that I spent 1,400*l.* in four years in cake and manure in that instance and got 160*l.*

Compensation for increased fertility and for deterioration of the soil.

31,390. May we have your ideas of what you would like to see enacted? How would you deal with compensation for increased fertility of the soil, or a deterioration in the fertility of the soil?—I may say that old systems of farming are not altogether suited to present day requirements. For instance, in some seasons hay and straw are far more valuable in the market than as an article of consumption on the farm, and yet agreements as a rule compel the farmer to use these at home. It seems also not unreasonable to expect that with the advances in knowledge likely to arise from the spread of technical education the methods of farming will undergo further changes in the future. I think there should be some tribunal to which the tenant could appeal as to whether the terms and conditions of an agreement are just and reasonable, and that if any such terms or conditions were found to be unjust or unreasonable he should not be held liable for any infringement thereof. It is not unusual for burthensome and vexatious conditions, which are neither sound from an agricultural point of view nor in accordance with common sense, to be imposed on a sitting tenant, who may be induced to accept them rather than leave his farm, because to give up his farm means to him great loss and expense for which he can get no compensation. It is a serious matter, for instance, to be forced to place a valuable farm stock on the market for compulsory sale, just, perhaps, at a time when values are much depressed. And this brings me to the question of fixity of tenure. Although I am not prepared to say that I advocate absolute fixity of tenure, yet I think the tenant should be protected in some way from arbitrary notice to quit, say by being allowed compensation for disturbance, and should not be obliged to pay more than a reasonable rent. The tribunal which I have already suggested might deal with these two matters also.

Fixity of tenure.

Landlords.

31,391. What is your proposed tribunal?—I think some land court should have some means of dealing with agricultural holdings cases. A court of some kind should deal with the cases under the Agricultural Holdings Act. It should be so constituted that claims could be submitted to it, and also questions of notices to quit and other things where they are arbitrary.

31,392. You want a court. I do not quite understand that. Do you want the court or the Act altered?—I want the Act altered. I want better effect to be given to the Act, and I say there should be some tribunal created under the Act.

31,393. What is the nature of that tribunal that you wish to see created?—It might be some judge appointed by the county councils of the county. But what we complain of in Northumberland is this, that the sitting tenant perhaps has farmed his farm well and cannot get as fair a bargain for that as does the man who farms his farm badly. On that point I may submit my own agreement under which I hold, and I say that it is not common sense that I should be told to sign such agreement or to quit my farm.

Mr. J. Wilkinson.
19 July 1894.

31,394. Do you say that the court should fix the rent?—No, not entirely, except in exceptional cases.

31,395. What would you call exceptional cases?—I think if we had the tribunal in force the necessity would not arise so often as it does now for interfering. We want some tribunal to appeal, not against the good landlords but the others. I do not say but that there are owners as good or better than legislation will make them, but in every county there are a number of men who never come near their property, and who leave it entirely in the hands of others to manage.

31,396. (*Viscount Cobham.*) Are they in the habit of giving arbitrary notices to quit?—When you want your farm rent reduced you cannot get it done as you ought to have it done.

31,397. (*Sir Nigel Kingscote.*) You mean reduced as to rent?—You cannot get a sufficient reduction of rent so as to enable you to meet the requirements of the times.

31,398. (*Viscount Cobham.*) You speak of arbitrary notices; what do you say with regard to them?—I gave my farm up on account of game abuses 10 years ago and was told I would not have it at any price again.

31,399. (*Sir Nigel Kingscote.*) Then you want a court, as I understand it, to fix rents as well as to deal with arbitrary notices?—In exceptional cases I submit it would be necessary.

31,400. (*Mr. Chaplin.*) Who is to decide whether it is an exceptional case—the court itself?—Let the court decide it.

Restrictive covenants in his own lease.

31,401. (*Sir Nigel Kingscote.*) Then every case would have to go before the court?—My impression is that it would not be necessary to take so many of them. If there was an appeal against arbitrary proceedings I think that in the end we should get fair play. I wish to submit my agreement here. I am compelled to farm upon a four-course system, and when I objected to be bound by that I was told to sign that agreement or quit the farm, and a four-course system, I may say, on my farm is simply lunacy. That is the only way of putting it.

31,402. (*Mr. Chaplin.*) You were already in possession of the farm, I understand?—I was in possession of the farm.

31,403. What was the agreement like?—Similar to this, but I may say that I took it when farming was better than it is now, but I wanted my agreement altered to meet the new condition of things. I bought a good deal of land that was laid out of cultivation when I bought it, and I wanted the landlord there to buy that land or to take it at a valuation, and he refused to do so, and I am compelled to farm in complete contradiction to that agreement, and I say that is an arbitrary proceeding.

31,404. (*Viscount Cobham.*) Is that restriction as to the four-course system put into practice?—Yes, I may say I have 200 acres I can plough, and I am not speaking of my own case alone. I wish to say that I am in a similar position to that of a large number of other farmers in my own county, and these are the conditions in force. We have laid away the land to grass, and I may say in my case we have used a good deal of artificial dressing upon it, and the owners will not buy it, and we cannot work farms under that condition of things.

31,405. (*Sir Nigel Kingscote.*) Are not the agreements altered to meet that case?—No, my agreement is of the same kind, I should think, as existed in the days of the Tudors.

31,406. But have you been interfered with?—No, but I may say I had a notice to quit last year on account of different ownership, and I am living under notice to quit now. Through the change of ownership the farm is for sale, and I was under notice to quit last autumn, and notice to quit was given last May, but I cannot keep to that agreement under such conditions.

Mr. J. Wilkinson.
19 July 1894.

I do not wish to have one thing that belongs of right to the owner, but I say that there ought to be fairness and reasonableness in an agreement if it is to be kept.

31,407. (*Viscount Cobham.*) Do you religiously keep to the four-course system on your farm?—I never pay the slightest attention to it.

31,408. (*Mr. Chaplin.*) What is your alternative?—I say that the question of fairness and reasonableness of an agreement should be submitted to a fair tribunal at the end of the tenancy. I do not care what the tenancy is, but it should be a fair one.

31,409. I understood you to say you were compelled to apply to have your agreement altered, and it was refused?—I was told to sign the agreement or leave the farm. My agent said: "I shall not make my "agreements to suit you, but all classes of people."

31,410. If you left your farm now would you do so at a loss?—Yes. I may say that knowledge of the land is of value in our county, and in recent years I have had to adapt the land to different conditions. I have Cheviot stock, and it takes a number of years to get a proper stock together of that kind, and it is not the work of a year or two, and I do not consider it fair to have my stock forced upon the market at an inopportune moment.

31,411. (*Sir Nigel Kingscote.*) By Cheviot you mean sheep from the hills?—The sheep bred on this land breeds a good deal better on this land than others, and I say the tenant farmer wants some protection in regard to selling them. I may say my own agent said to me once: "You cannot afford to sell your stock in "these bad times"; and I say he has no right to exact rent from me under these conditions.

Land courts and arbitrary evictions.

31,412. You want a legal court constituted to deal with these matters?—Yes.

31,413. (*Mr. Clay.*) You say it is a very serious thing for a tenant to be forced away under these conditions?—Yes, with such a Cheviot stock as I have got.

31,414. Is stock bred on the ground more valuable than stock not so bred?—I may say that I bought a few ewes last year to make up a loss, and they have not done so well as my own sheep bred on the farm.

31,415. When sheep are bred on the ground they are more valuable than stock bought here and there?—Yes, and if you have a large stock of that kind of sheep, then to be forced away in an arbitrary manner is not just.

Land courts and value of manures and feeding stuffs.

31,416. (*Sir Nigel Kingscote.*) Would this court that you wish to see established decide everything as regards the value of the fertilisers and feeding stuffs that you used?—I may say that is a very costly matter at the present moment. I may say I have been concerned in four or five cases, and charge as lightly as you will there is always a good deal of cost incurred, and I think if a less expensive tribunal were established it would be a great advantage. I might say I honestly believe myself if we had this power of appeal there would be very little occasion to utilise it in our county.

31,417. (*Captain Owen Thomas.*) Has this matter been discussed in the Newcastle Club?—Yes. I have had some discussion there, and I know that my views are in accordance with the views of the majority of farmers.

31,418. (*Sir Nigel Kingscote.*) The Farmers' Club endorses your views?—The majority of them do.

Ground Game Act.

31,419. Have you anything to say as regards damage by game?—I am sorry to say that up to 1880 we suffered a good deal from game, such as rabbits and pheasants and other things. The bad times have made them a bit scarcer, but I am sorry to say they are making their appearance again.

31,420. But since that time there has been the Ground Game Act passed?—Yes; but if you get a quiet hint from your landlord that you had better leave the game alone, I know what that means.

31,421. What do you wish to say as to that?—I may say, in passing, that I think the owner who does not leave his property, but discharges his duty, is entitled to a fair day's sport, but to keep and preserve game for commercial purposes at the tenant's expense cannot be longer tolerated in this country, and I do not think it will be.

31,422. (*Viscount Cobham.*) Has the shooting on your farm been let in recent years?—It is not let at present, but up to recent years it has been. I myself left a farm some years ago because it suffered a great deal of damage. I was turned out of it on account of game, in fact.

Mr. J. Wilkinson.
19 July 1894.

31,423. (*Sir Nigel Kingscote.*) You have an objection to shooting tenants?—Some of the owners are not much better.

Effects of strikes on agriculture in Northumberland.

31,424. Have you anything to say as to the effect of strikes on agriculture in your neighbourhood?—I think I may say they have a very serious effect upon the purchasing power of the working population.

31,425. In what way?—I may put it in the shortest way, and the most convincing way, if I say that the butchers coming to buy in the fat market from these centres say such things as—"We want nothing this "week, for people are all out of work and they cannot "buy."

31,426. In fact, when the mining population or manufacturing population are at work you are able to sell your beef and mutton at a better price, or at all events more easily, than you can when a strike is going on?—Certainly. I have no doubt if people could get fair and regular employment our agricultural depression would to a great extent disappear.

Arbitrary notices to quit.

31,427. (*Viscount Cobham.*) I can understand notices to quit such as you have received being vexatious, but I want to know whether such notices are often acted upon?—No, not often. I may say as to one estate in our county where several farms were given up in turn, when one man was obliged to go, the agent only said, "I have shot one crow and frightened the rest." I do not like that kind of thing hanging over our heads, and I will not tolerate it; that is all that is about it.

31,428. The man had to leave his farm for purely arbitrary reasons?—The farm was given up over the question of reduction of rental. It is not a very nice matter, leaving your stock and everything in your district which you have been brought up in.

31,429. And it is not a very nice matter for the landlord to have a large farm on his hands, is it?—There is practically no land to let in Northumberland.

Competition for farms.

31,430. There is always competition for a vacant farm, is there?—There is more than usual this year. People with perhaps a few hundred pounds are rather disposed to embark in farming from various causes, and these people are our competitors.

31,431. Do you get competition from outside?—Yes, from people that are not farmers. I may say there have been three small farms let within a mile of me, and the holders are not farmers.

31,432. Then the occupation of farming presents some attractions still?—A man with a few hundreds can scarcely get an investment for it, and if he has a family he is rather induced to try farming.

Price of meat.

31,433. And comparing farming with other investments, you think an investment in a farm has its attractions?—Such a person as I am speaking about is thinking that at present, but he has his experience to purchase.

31,434. (*Mr. Whitehead.*) You get 6*d.* a pound for your meat, you say?—Yes, 5½*d.* to 6½*d.*

31,435. There is an enormous difference between the former prices and present prices, is not there?—I may draw your attention to this circumstance, that there is only a very small portion of a beast that is first-class quality; most people that have the means to do so buy that quality, but as to the rest of the beast there is great difficulty in selling the coarser parts on account of foreign competition coming in.

31,436. Do you think that the retail prices charged by butchers are not excessive?—They are not very excessive, if you consider that you are buying what is termed a luxury, the better cuts of beef and mutton.

Employment of women in agriculture.

31,437. Going to another question, what kind of work did the women do formerly?—They hoed turnips and took up the corn in harvest-time after the mowing machine.

31,438. (*Viscount Cobham.*) They do that now?—But we cannot get them so readily, since they have got better educated they are leaving such work.

31,439. (*Mr. Whitehead.*) Is women's work of that kind cheaper than men's work?—It is 15*d.* a day for the girl's except in harvest time, when they have from 2*s.* 6*d.* to 3*s.* a day.

31,440. Is their employment, from a moral point of view, desirable in such work?—If the cottages are satisfactory and healthy it is desirable enough.

Mr. J. Wilkinson.
19 July 1894.

31,441. Then you say your labour bill is higher than in former times?—It is higher, and the labour is more difficult to get at the proper seasons.

Cost of labour.

Small holdings.

31,442. I think you spoke of small holdings and advocated them as being desirable to be extended in respect to cultivation of garden produce and so on?—Yes.

31,443. Do you know of instances of success in that matter?—I think myself, as I have already mentioned, there are a number of people who cannot get suitable investments for small capital, and they have a tendency to take to farming. I do not say that the small holder is any better than the larger one.

31,444. Do you think small holdings should be extended?—I think so.

Dairy farming.

31,445. What do you say about dairy produce?—I say this, a man with a family of his own can make a dairying business a success if he is near a railway station, whereas a man that has labour to hire cannot. On these farms that I have mentioned as being let, in one or two cases a man's family does the dairy business. There was a blacksmith took one farm.

31,446. (*Sir Nigel Kingscote.*) What size farms are they?—60 to 80 acres or 120 to 140 acres.

31,447. (*Mr. Whitehead.*) It is in those circumstances very likely to be satisfactory, is it?—Yes, but at the same time I think the people work very hard for what they get.

31,448. And much harder than labourers do?—Yes, a great deal.

Technical education and methods of farming.

31,449. You stated in your opinion, I think, that the methods of farming would have to undergo further changes on account of technical education. Tell the Commission what you mean by that. Do you mean improvements, or changes in the method of cultivation?—I think we have got out of the trough of bad times, and we are adapting ourselves to new conditions. We know more about the value of cakes and manure than we used to do, and we have learnt to be more economical in their use, and not to spend too much on them. I think the tendency now is with regard to the large quantity of foreign produce that has come into the market, to make it a question whether it is a wise proceeding to use so much cake and manure competing against it.

31,450. You think the farmers have been educated by the technical education committees?—Technical education is not of much practical value unless you have practical acquaintance with your work as well.

31,451. What sort of technical education do your farmers get in your county?—Lectures on the value of manures, and lectures on improved system of dairying and butter making—a good deal may arise from that. I think there is a tendency to use more artificial manures on poorer lands if we had perfect security for having used them.

31,452. And the tendency of your farmers is to improve themselves?—In the majority of cases; but most men farm very well in my neighbourhood. I come from a district where we buy and sell our own stock and take a practical part in the working of our farms, and you will not find one man in a hundred riding about his farm as a gentleman, whatever the size of his farm may be.

Damage by game.

31,453. As to game, have you had any losses through that?—I had a farm on another estate for four years, and I left that farm through the game entirely, after a serious loss through it. Previous to that we suffered a good deal from rabbits on the estate on which I lived. I may say the landlord was a respectable man, and did not act unfairly to us in other ways. He allowed a lot of rabbits to be about, but he did not punish us in regard to rents.

31,454. Did you get any compensation?—Not a penny.

31,455. You said that some farmers had quiet hints from landlords not to kill game. Have you had such hints?—Not myself, but I know cases where they have been given. In one year I had a notice from my agent that if tenants interfered with game there would be no improvements done for them. That applied to myself.

31,456. (*Mr. Clay.*) I think your part of the country has lately been given more to grazing?—Yes.

31,457. What about breeding of cattle?—Not so much breeding of cattle; it is rather more a feeding district for Irish cattle, although in the western and north-western portion of the county the breeding of cattle is still the principal occupation among the small occupiers.

Mr. J. Wilkinson.
19 July 1894.

Breeding of cattle and importation of foreign beasts.

31,458. Do you think the breeding of cattle has been at all curtailed through the fear of disease coming upon that class of stock?—Yes.

31,459. And if you were completely freed by Act of Parliament, and were enabled to keep out all disease from all parts of the Continent, do you think the breeding of cattle would increase with you?—Yes, I think we should have a more regular price for lean stock, and that would be an inducement for people to go in for it.

31,460. And the farmers would have a better class of agricultural stock, and more of them?—Yes, that is my opinion.

31,461. You are not like the Forfar man who advocated the admitting of cattle from all parts and taking the risk of disease?—I do not think anybody can feed these American cattle except in Forfar and Fife. I do not think anybody has land or turnips of sufficient quality to feed them but in Fife and Forfar and Aberdeen.

31,462. Would the admission of cattle into this country from Canada even mend the chance of the disease being stopped?—I should like to see it stopped. I say the few cattle that come are as nothing.

31,463. But the risk of disease is serious?—I take it you are aware of the difficulty there is of dealing with that disease at the present time.

State loans for improvements.

31,464. With regard to the lending of money, do you consider that 7 per cent. is too high a rate for a man to pay, and at the same time make a profit out of the transaction?—It is out of all proportion to the value of money at the present time.

31,465. And do you think if Government were advised to give money at 3½ per cent. great impulse would be given to the improvement of the land and to the general trade of the country?—I think so. I may say that when the money was spent previously by the Government it was not under proper control, and I must say this that I did not think the landlords took a sufficient interest in seeing that it was properly spent.

Drainage under Land Drainage Act and government inspection.

31,466. What do you say about drainage?—If the drains are 4 feet deep I think they might as well be 14 feet deep. I think the owner of land should take sufficient interest in his property, and if he could see the money was properly spent it would be a paying investment, both to the owners and occupiers and the whole community. I would like to see landlords take more interest in their properties, and live more at home. That certainly would be a great advantage to us all.

31,467. (*Viscount Cobham.*) Do you say the inspection by the Board of Agriculture has been insufficient?—The Drainage Commissioners are, I think, a private company. It is the Land Improvement Company.

31,468. But the inspector is a public official?—He is appointed by the Land Improvement Company.

31,469. No?—His inspection, however, is not worth a brass farthing. In my case he came to see the land before it was drained, and in many cases he comes to see it before it is drained and after it is drained.

31,470. (*Mr. Clay.*) The inspectors are confined to certain lines of depth in regard to draining by the Government?—Yes.

31,471. It was so in time past?—Yes, but I may say that the inspection is practically valueless. What is the use of a man coming after a field is drained? He does not know how the fields are drained. The drainage levels are not known.

31,472. (*Viscount Cobham.*) Did not the inspector see the drains in your case before they were covered in?—No, there was about 1,000*l.* or 1,200*l.* spent on my estate, and he never saw it done. In fact, he came after they were done and closed up.

31,473. (*Mr. Clay.*) But was not it the general understanding when they got money from the Government that the drains had to be 4 feet deep, whether good drying land or not?—You are correct as to a time up to 14 or 15 years ago, and in the case I have referred to I hold that the inspection was not worth the paper it was written on.

Mr. J. Wilkinson.

19 July 1894.

31,474. (*Sir Nigel Kingscote.*) In your case it was left to your discretion?—It was left to my discretion, and we took special care to see to the levels of the drains. I wish to say that in spending money proper care should be taken to see that it is properly spent.

31,475. (*Mr. Clay.*) Do you go this length, that you consider in the past a good deal of the Government money was thrown away?—Simply thrown away, and I know a gentlemen, who ought to know, who said the way it was spent was a very great misfortune to the owners at that time.

Compensation under Agricultural Holdings Act.

31,476. As to the Agricultural Holdings Act, you point to having more security for increased fertility and for turning grass land into arable land?—Yes, I think we should have compensation for all improvements, and if we laid down grass to keep stock, a man should be compensated for it.

31,477. You want to make the Act so framed and so made applicable as to meet your requirements in dealing with landlords in Northumberland who do not deal fairly?—We want to be able to deal with them on equal terms, and not for them to be able to say, "Sign that agreement or quit your farm." We are tired of that sort of thing in Northumberland, and it is a sort of thing we are not going to tolerate any longer.

31,478. It is the unfair landlord whom you would like to bring under the operation of the Act?—It is. They stand in need of coming under the operation of the Act.

31,479. Your principal idea in that respect is in taking a farm that you want consideration to be given in rent according to the improvements you have made upon the grass lands?—Yes, but it is not so much in taking and leaving your farm, but when you have it fairly well farmed and stocked you never get compensation. And with respect to freedom of cultivation, a tenant farmer told me a day or two ago that he is spending 1,000*l.* a year on cake and manures, and he cannot get leave to sell hay off his farm or straw when it is dear, and that is my very case. We cannot get our rentals reduced at the present time.

31,480. And that is why you think something like a land court should be brought in to arbitrate in reference to the rents of farms?—I think if we had fair and reasonable conditions the question of rent would not arise so often.

31,481. Who would decide what were fair conditions?—We would leave it to the Court of Appeal to say whether we get fair conditions. I want to point out to the Commission that land that is going out of cultivation has no value to the owner. I do not want to ask anything unfair to my class or unfair with regard to landlords, my sentiments are in the opposite direction; but I may say that in Northumberland we are satisfied of this, that we want better security, and we do not want an increase of rent put upon us on our own improvements afterwards. We want something to live on.

31,482. All you want is to keep up the fertility of the soil to the advantage of all?—Yes. I hold that if a man has his farm well farmed he should not be in a worse position than he would be in if he had farmed badly.

Fall of rents since 1880.

31,483. (*Mr. Gilmour.*) What has been the average fall of rent since 1873 in your country?—There has been no fall until about 1880, and I think about 20 to 25 per cent. from then would be the most. There are a good many instances of 10 to 20 per cent. fall.

Drainage.

31,484. I suppose a good deal of the land drained 20 years ago probably stands in need of it again now?—Not 20 years ago, but about 30 years ago.

31,485. Do you look forward to the time coming very near now when there will be a considerable demand for draining and re-draining?—I think a good deal of land would derive an immense advantage from draining, and it is not going to be safely stocked unless it is improved.

31,486. Then do you think the question of getting money at a cheap rate may come to be a question of importance during the next 20 years?—It is very important to get us over this new period. We are getting into a new period, and there is no getting rid of that fact, and we have to accept the condition of things as they are, but I do not think agriculture would be ruined if we could get fair play.

31,487. You put it as a considerable grievance, your having to put your stock on the market when you have to leave your farm?—Yes.

31,488. Does the custom prevailing in the north in regard to black-faced stock not hold in your county—that the incoming tenant takes over the stock at a valuation?—No, that exists practically very little in Northumberland, unless it be where Mr. Clay has farms. I think it exists in no other part of Northumberland except in the Cheviots at any rate.

Mr. J. Wilkinson.

19 July 1894.

Disposal of stock on quitting farm.

31,489. If that was made a condition would that do away with a considerable part of your grievance?—It might do away with a portion of it; but it might be considered arbitrary sometimes to force that upon a tenant entering.

31,490. With the increased price he would pay for that stock he would receive value?—There is a feeling that too much has been paid in certain instances. Too much is put upon it, whereas it requires to be dealt with in a fair and moderate spirit if it is to be allowed.

Leases.

31,491. As to the men that are taking these farms at present, are they taking them or are they willing to take them on a 19 years' lease?—No. We have practically no leases in our county. None sign leases on any conditions.

Security under Agricultural Holdings Act.

31,492. (*Mr. Chaplin.*) With regard to the Agricultural Holdings Act do you consider that the position of the farmer as regards security is worse or better than it was before the passing of that Act?—It is slightly better I think, but not to amount to any very great advantage.

31,493. But there has been some improvement?—There has been some improvement.

Ground Game Act.

31,494. Now with regard to damage from game, what has been the effect of the Ground Game Act?—In a good many instances at the time after it was passed it had an effect in diminishing the rabbit nuisance, but in odd cases it is creeping in again I am sorry to say.

31,495. Do you mean to say the rabbits are increasing again?—Yes; and there are hints from the owner to the tenant that he had better let the game alone.

31,496. And are there any cases within your own knowledge where the rabbits have increased by the action of the tenant himself?—I daresay there are some tenants who are no better than they should be about rabbits.

31,497. Then I take it, it is the case sometimes?—Such tenants are as big a nuisance to have for a neighbour as to have a bad owner, but I do not think it is a general thing to have them.

Fall in rents since 1880.

31,498.—The rents, I think you say, have fallen since 1880 something like to 20 to 25 per cent.?—25 per cent. would be an exceptional instance; 15 to 20 per cent. would be the average. There has been no reduction anything like compared to what has been done in the south of England. I am speaking as a member of the Assessment Committee, and that has been my opinion for many years.

31,499. I ask these questions because I observe that in your proof you describe as among the causes of depression high rents, damage from game, and defects in the Agricultural Holdings Act?—Yes.

31,500. Agriculture was much more prosperous, was it not, twenty years ago than it is now?—Yes, because the prices were about 35 per cent. higher.

Causes of depression.

31,501. Then it is hardly correct to describe these matters as causes of depression, seeing from what you tell me that with higher rents, with worse security of tenure, and with more damage from ground game, farmers were more prosperous than they are now?—The simple fact of the matter is that corn and barley were worth 40*s.* a quarter, whereas it is worth only 20*s.* now in many cases. Mutton was worth 40 per cent. more, and beef was worth 35 per cent. more, and wool was worth 50 per cent. more. Another factor is this, that some other kinds of investments than farming do not pay so well now. Again this is a fact which Mr. Clay will agree to who understands the matter, that the bad seasons have had such a serious effect upon the value and quality of sheep stock.

31,502. I observe you did tell us that the main causes of the depression were higher rents and bad seasons combined?—Yes.

31,503. Now, you express the opinion, I think, that a further outlay in feeding stuffs and artificial manures might help farmers to get over the difficulties to some extent at the present time?—Yes.

Improvement of inferior land.

31,504. Of what class of land are you speaking?—More of the secondary class of land, and I say that

what I advocate would help to keep the better classes of stock up and enable us to deal better with foreign competition. The secondary sort of meat suffers most from foreign competition. Here is another factor: with an improvement on that secondary land the farmer can keep sheep sounder upon it. But in hundreds of cases in recent years he has not been able to do it. I could give you a district in my own county where the whole of the sheep stock disappeared in one winter altogether.

31,505. (*Mr. Clay.*) That is one reason why that land should be drained because of the present position of that land?—You should not put sheep on that class of land. I would not do it if I was paid for it half their value.

High farming.

31,506. (*Mr. Chaplin.*) We have had a good deal of evidence to this effect, that where there has been the greatest outlay in farming, where the farming has been of the highest class, the losses have been the heaviest?—To some extent you can go beyond justifiable expenditure; but I think with careful attention to your business and careful spending, caking and manuring still pay.

Security of tenure.

31,507. Now, would you tell us how you want to stop injustice by an alteration in the law. Do I understand you to say that injustice in that respect is a serious factor in the position?—It is not a general factor, but my experience is, and I know there are cases which could be presented here, where the tenants cannot get satisfactory terms on account of not having proper security. We have our farms given up, and we cannot get them reduced. What I hold distinctly is this, that the sitting tenant cannot get the same reduction if he has his farm well stocked as the man can get who farms his farm badly.

31,508. That, I think, confirms me in the view of the evidence you have given us, that it appears to me your difficulty has arisen mainly in the case of farmers who are already in possession?—To a great extent.

Competition for farms.

31,509. First of all, take the case of the farmer who is going to take a farm, and who is perfectly independent, are not you in a position to make your own bargains in Northumberland?—I say the competition is too great. Last year there was very strong competition for farms.

31,510. There is strong competition even in these days of depression then?—There is strong competition even in these days of depression.

31,511. For good farms in Northumberland?—For good farms in Northumberland.

Security of tenure and compensation for improvements.

31,512. Then what you want is the law to step in to enable you to get them on rather more favourable terms?—No, nothing of the kind. I hold that a man who takes his farm at the present time takes it with his eyes open.

31,513. But I am dealing with the case of a man who is making a fresh bargain altogether. In his case, as I understand, you do not think legislation is necessary?—Yes, I think it is necessary. After he starts upon his farm he ought to have proper security for what he spends.

31,514. But I want to know this: before he starts, is a man not in a position to make a fair bargain for himself?—Not in our county.

31,516. Is it because there is so much competition?—Yes, there is competition, and a man who wants to make a strong bargain is often kicked out of our county.

31,516. Then it does come to this, that you ask for legislation really to enable a man to make a better bargain—that is what you consider an effective bargain?—He should have fair terms when he quits his farm. I want to point out this to you: that the capital of the tenant is necessary for the cultivation of the soil, and legislation is of little use after he is ruined.

31,517. I am speaking now of the present position with regard to a tenant who is going to take a farm. If he cannot get satisfactory terms to himself he is not obliged to take the farm?—I will put the case this way, supposing you have stock you do not want to sell upon the market——

31,518. But I am speaking of the man who is taking a farm?—Supposing he has lost his farm and wants to take another.

31,519. We will take that case afterwards. But take first the case of a man now entering upon his farm?—He cannot take a farm in our county now upon his own conditions.

31,520. Why does he take it then?—He probably does not want to leave his county.

31,521. And that is the reason why he agrees to terms that are unfair?—He may have done it for various reasons.

31,522. I ask you the question, and you reply to me that he does not want to leave his county?—That is one reason.

31,523. Is that a sufficient justification for calling upon the Legislature to interfere with the law in order that a man should not be obliged to leave his own county?—It may not be exactly a justification, but the agriculture of a county may disappear with the tenants, and I hold that their capital is of great importance in the cultivation of the soil, you have a good example of that in the southern counties.

31,524. Now, going to the case of a man in possession, there I understand your view is this, that it might inflict very serious loss upon him for him to have to change his farm and part with his stock, and there is so much competition that he cannot get fair terms, and has often to undergo a loss in consequence, and he is compelled in this way to agree to terms which he thinks are not fair?—That is an unquestionable fact, and I know several cases of that kind at the present moment.

31,525. Then the fact of his having this large stock of sheep, and sheep of a particular breed, as you have described to us, gives the owner an extra handle against the farmer, I suppose?—Certainly.

31,526. He suffers more in this case than in the case of an ordinary arable farm?—I will explain this in this way to you. All arable farms are farmed in our county on a five or six course, and sheep forms a large part of it. Farming is not conducted with regard to arable farming alone, it is more to manage the live stock.

31,527. Then you advocate a court that, under certain circumstances, should interfere between the landlord and the tenant in the fixing of the rent?—I advocate that we should get fair terms and conditions.

31,528. Including the rent?—That we should meet on fair terms when we come to fix the rent.

31,529. I understand you justify that on one ground by saying that that is what has been already done in Ireland?—Yes.

31,530. But are you aware that the circumstances and conditions of land tenure and land ownership in Ireland are totally different from the conditions which at present exist in England?—I will put the case in this way to you: supposing a man spends 1,000*l.* or 2,000*l.* a year on cake and manure, is he not making an improvement to compare with the Irish tenant.

31,531. All improvements, large or small, permanent or temporary, in Ireland have been made in the past by the tenants, but in England those improvements have always been made by the landlords?—To that extent there is a difference, but I cannot see that Irish tenants should have such good security and Englishmen none. Have we no rights as tenant farmers in the soil we cultivate?

31,532. I want to draw your attention to this: when you cite Ireland as a justification for your views, I want to be clear as to whether you understand that there is a great distinction and a marked distinction between the circumstances of the two countries in the respects that I have pointed out to you, and now I want also to ask you this, was it not the case that in Ireland the tenant was held to be, whether rightly or not, a sort of part owner of the soil in virtue of the great outlay he had made in improvements?—I think you are assuming the outlay is more than it really is. The value of the cottages does not amount to so much as it appears. I hold that the cake and manure and labour bill stands against that very strongly. I know a good deal about the Irish question.

31,533. You have considered the Irish question very carefully?—Yes, I have considered it very carefully, and I have heard a good deal of it lately.

31,534. And you are of opinion that the improvements attributed to the tenants there have been exaggerated?—I think there might be errors both ways. They have got their improvements because their representatives have stood to their guns a great deal better than our English representatives have done.

Mr. J. Wilkinson.

19 July 1894.

31,535. Then on those grounds you wish to see Irish legislation adopted here?—Not to the full extent. I beg your pardon. I do not want to be an owner or co-owner or partner in a farm with my own landlord, but I hold that he should not have my improvements, or live on my capital any longer.

Land courts and fair rents.

31,536. Do you think there is no way of giving fair compensation to tenant farmers on leaving their farms short of the principles of Irish legislation?—I do not go so far as that. I hold there should be some reasonable tribunal to appeal to on this question.

31,537. And should the questions to be submitted to them be fair rents and fixity of tenure?—No, not fixity of tenure, on any account whatever. I hold that the capital of the tenant is better employed in the cultivation of the soil. I want to have our landlords deal more fairly with sitting tenants, and sitting tenants should not pay rental upon what they have done upon the farms any more than Irish tenants do. In the Newcastle market we find Irish cattle cheaper than we can put them there.

31,538. What I understand you to say is this: that you advocate changes in legislation so far as this, that the landlord is not to be allowed to sell the use of his land to the tenant for the best price he can get—for the market price?—What belongs to the landlord let him sell at the best price, but he has no right to sell what belongs to the tenant.

31,539. In the case of a tenant taking a farm where the tenant enters upon it for the first time, the landlord has the right to let that farm According to your own view that belongs to him?—That belongs to him, and he has a right to let that farm on condition that the outgoing tenant gets fair payment for what he has done.

31,540. Take the case in which the landlord holds the land himself. Does the provision you suggest apply in that case?—No.

31,541. Then it is not to be universal?—There are a number of competitors then, and it is an open and free market, and I say let the landlord make the best terms he can, on the condition that he is not robbing his outgoing tenant.

31,542. But the fixing of a fair rent applies to the new tenant?—I think if a man has taken a farm he ought not to appeal with regard to his rent for a number of years. An absolutely new tenant should not appeal till he has had it a few years.

31,543. That is quite a new proposal. How many years do you say?—Five to seven years. You will be aware of the great changes that have taken place within the last seven years in our conditions.

31,544. You say a tenant has to make his own terms as to rent and agreements and other conditions, and then a few years afterwards, supposing he finds out it is not satisfactory to himself, he may apply to the court to alter them?—If the court is a fair one, why need the landlord be afraid to go into it.

31,545. Is that the fact?—That is the fact.

31,546. That is the position?—That is the position I contend for.

31,547. The tenant is to take his farm in the open market, make his own agreements, and then at the end of a certain number of years he is to be able to have a court in reserve to go to, which will alter his terms if he thinks fit?—Yes. If the tenant refuses to take the farm at the rent the court fixes.

31,548. Is the landlord to have the same privilege as the tenant at the end of five years to improve his position?—Certainly. I would ask for no privileges for us than did not apply to the landlord.

31,549. (*Sir Nigel Kingscote.*) In such a case is the tenant bound to remain in if he thinks the rent too high?—No; he can go if he likes.

31,550. (*Mr. Chaplin.*) Do you think, as a matter of practical business, that would be a satisfactory arrangement even to a good tenant himself. He would know that he had got his farm on a fixed agreement for five years, but beyond that time he would never be certain that it might not be altered and his rent raised?—What certainty have we at the present moment in that respect?

31,551. You have certainty if the farm is taken on lease?—As I have said, I do not think any sane man would sign a lease in our county. Nobody can tell what will happen in five or six years.

Mr. J. Wilkinson.

19 July 1894.

31,552. Then is it quite impossible in the case of Northumberland to make fair agreements for yourselves even in the case of good men?—I have no hesitation in saying so.

31,553. You adopt the principle that under certain circumstances the landlord is not to be allowed to sell his farm for the best price he can get, and do you extend that principle any further? Do you extend it to the produce of the land?—It is not extended to the produce of the land in Ireland. Why not give us a fair court here? I wish it would be so.

31,554. Do you say the tenant is not to be allowed to sell the produce?—I beg your pardon.

31,555. You have laid it down that the landlord is not to be allowed to sell the use of his land for the best price as I understood, and would you extend the principle to the produce of the land and say on public grounds you shall not be allowed to sell the produce at the best price?—Certainly. I think if he does not decrease the fertility of the soil he ought to be allowed to sell the whole of his produce in the best market he can.

31,556. That is to say with regard to the tenant, but the landlord is not to be allowed to do so then?—I wish you to understand me distinctly on this question.

31,557. I want to?—When the tenant's farm comes into the market let the landlord get the best tenant he can, but after the tenant has spent a great deal of money on the farm and has made a change in the condition of its cultivation for the better, let him be at liberty to appeal to some court to get a change of rent if necessary, and let the landlord be in the same position as to that as the tenant is. It would be a very different thing if we had no foreign produce coming into the country—we should not be here probably.

31,558. (*Chairman.*) I understand the change is to come into operation after the tenant has been in possession five or six years?—After he has been in possession five or six years.

31,559. But supposing the tenant comes in in the interval, is the landlord to be entitled to get rid of him or not without taking into account the improvements made by the former tenant?—Most decidedly, if the tenant who has come in in the interval pays for the improvements that were on the farm when he came in he is entitled to compensation.

31,560. Then practically during the term the landlord may resume possession if he likes?—Certainly.

31,561. It is only after five or six years that the principle of judicial rents is to come into effect. Is that so?—Yes.

31,562. (*Mr. Chaplin.*) This principle with regard to rent would not be applied in the case of any tenant who had not held his farm for five years?—Five years. I do not think it would be fair for a man to take a farm and go to the court within a year or two.

31,563. Then it is to be open to either party to go to the court and have all the conditions of taking the farm altered?—Certainly, if the conditions and circumstances justify it.

31,564. You think that would be satisfactory to the tenant?—The tenant can take care of himself when he meets his owner on fair conditions.

Fixity of tenure.

31,565. (*Mr. Dalton*). I understood you to say you were not in favour of fixity of tenure?—No.

31,566. But would not this amount to fixity of tenure if at the end of five or six years the tenant could go into court and have his rent reduced?—I have said nothing as to preventing the landlord giving his tenant up any time during his tenancy, but what I want to say is that the notice shall not be arbitrary, and shall not create injustice to the occupier. There is nothing I have said here to-day preventing a landlord giving up his tenant at any time on condition that he does not treat him in an arbitrary and unfair manner.

Arbitrary notices to quit.

31,567. What was the ground of most of these notices to quit that you were speaking of in your county? I think you said that there had been a great many?—Not a great many—a few.

31,568. What was the matter in dispute? Was it rent as a rule?—Rent as a rule—people giving up their farms because of wanting a reduction of rent and not being able to get it.

Mr. J. Wilkinson. 19 July 1894.

31,569. The notices were given by the tenants that they would leave if they did not get a reduction of rent, you mean?—Yes.

31,570. That was the notice?—That was the notice in some cases, and some were given by the landlords in some cases.

31,571. In the cases where the notices were given by the tenants, that they wished a reduction of rent and would go unless they got it, there was no arbitrary notice from the owner, was there?—It may be a very arbitrary notice if a farm is in good condition, and you are compelled to sell your stock in an exceptionally bad year—that may be an extremely arbitrary action.

31,572. That would be a case for getting the rent fixed?—Yes, certainly.

31,573. But you would not consider that a case of arbitrary disturbance, should you? I think you want compensation for arbitrary disturbance, do you not?—Yes, that is in cases where you are forced off your farm.

31,574. When you are forced off or when any dispute arises of any kind with respect to the rent of your farm?—I think if a man cannot get a fair reduction of rent he is entitled to fair compensation if he puts his stock upon the market in bad times.

Reduction of rents.

31,575. I think you said the rents had been reduced from 10 to 15 per cent. in your county?—Yes.

31,576. What would be an adequate reduction?—If we got another 10 per cent. it would be a good deal better in some cases.

31,577. But you think you are getting out of the bad times now, do you say?—Well I think we know the worst to some extent, and we have adapted, or are trying to adapt ourselves, to the new conditions.

31,578. The matter that is really mainly in dispute between tenants and landlords is the matter of reduction of rents to the extent of some 10 per cent.?—I will explain it in this way: we have not got a sufficient reduction in rent to meet the falling prices and the bad seasons. I may explain that the character of the seasons influences the value of the produce, and we have not got a sufficient reduction of rent to meet all those things.

31,579. The principal desideratum in your neighbourhood, from your point of view, is that there should be a reduction of about 10 per cent. more on the rent?—Yes, most distinctly so.

Competition for farms.

31,580. (*Mr. Lambert.*) How many applicants would there be for a vacant farm, perhaps?—It depends upon the size. For one small dairy farm there were 20 this year. Larger farms have not so many.

31,581. The suggestions you make are as to enabling the landlord and tenant to meet together upon equal conditions to make a bargain?—Yes.

31,582. As to the question of the tenant selling the produce as he likes, he goes into the open market, meets the buyer face to face, and they are upon equal conditions then?—Yes.

31,583. But in the case of 20 men endeavouring to get hold of one farm, the landlord has a great advantage over those men?—Yes, he has an advantage to a great extent. I might say that 20 applicants only apply for small farms for dairy purposes.

31,584. But if there are five applicants say, they do not bid more than the farms are actually worth, do they?—Yes, I think they do.

31,585. I understand you to say you think that it is necessary that your suggestions should be carried out because agriculture, in its old conditions, has gone, and we are entering upon a new period?—I think so.

Compensation for disturbance.

31,586. Presuming that a tenant is unable to agree with his landlord upon the subject of rent, and the landlord refuses to give him an abatement which the tenant thinks he ought to have, would you in that case give or would it fulfil your views if the landlord gave the tenant compensation for disturbing him if he had to quit his farm?—Certainly.

31,587. What should you estimate the value or the amount that would be lost to the tenant by having to quit his farm?—Shall I take a very bad year?

31,588. Take percentage?—It might vary from 10 per cent. upwards upon the value of stock to be forced to sell it. I know a case where I was told you cannot sell your stock this year because your prices are bad, and I say why should I pay more rent on that ground.

31,589. I want a general average?—10 per cent. to 15 per cent. on the value of the stock to be forced to go on the market. It might be more in some cases.

Mr. J. Wilkinson. 19 July 1894.

31,590. It is a loss to a farmer to go into a strange neighbourhood, is it not?—Yes, and I think I know some men who have come south, who have said they came here, and they had to adapt themselves to the ways of the county, after they got acquainted with the conditions of the land and things, they probably could improve upon those conditions, but to start a new system was a dangerous experiment altogether.

31,591. And it often incurs loss?—It often incurs loss. That is the experience in my own county.

Law of distress.

31,592. Do you think the law of distress should be abolished?—Yes, I think it gives the landlord an unfair advantage.

31,593. You mean they take men whom they would not take otherwise, if they were more careful. The law at present, you state in your proof, steps in between the landlord and tenant?—It does to a certain extent with the Agricultural Holdings Act, and I want its principles to be extended.

31,594. Do you think the principle is necessary and absolutely essential that the law should be extended further?—Most distinctly so.

Damage by game.

31,595. You have had a great destruction of crops and fences by game, I understand?—We have had a good deal of it. I have had a good deal of personal experience on that question.

31,596. Can you give us any of your personal experiences?—I had an arable farm which I farmed for four years, and it was not an unusual thing to count about 100 to 150 pheasants amongst our barley. I have counted 40 hares upon the barley after it was above ground, and they simply destroyed the crop. Those are some of my experiences.

31,597. You have spoken of cases where hints have been given to the tenants with a view to evading the Ground Game Act by telling them that if they killed ground game no improvements would be done for them?—I was told that on one occasion by one of the largest land agents in my own county.

Arbitrary notices to quit.

31,598. And you are advocating these changes in the system of tenure to prevent farmers being arbitrarily turned out of their farms in that way?—Yes. I may say this, that more than one man was told that when my farm was to let that I would not have it on any conditions whatever.

31,599. If the farmer was turned out the landlord would have no difficulty in getting another farmer, would he?—I think not in our county. Two or three years ago there were two or three large farms rather let down in rent just then, but I think things have got better now.

31,600. Would the farmer have any difficulty in getting a farm?—I think he has in our county, a suitable farm for stock in most cases.

Restrictions on cultivation.

31,601. You say it is not unusual for burthensome and vexatious conditions to be imposed on a sitting tenant which he may be induced to accept rather than leave his county. Have you any personal knowledge of such cases?—I have my own farm agreement before me, which was forced upon me. I asked to have my four-course system altered to a six-course one, but I was told to take the farm with that condition or leave it, and that was told me by the agent for three or four Members of Parliament, and I do not know how many people besides.

31,602. You say there was no freedom of contract in that case?—Not a particle of freedom of contract.

31,603. You speak of Irish farmers. Have you any experience of Irish agriculture as to whether Irish farmers are prospering under the new system which is now in vogue in Ireland?—I think they are. I may say that for the last 30 years or more I have got a very large number of Irish cattle from Irish dealers—from 100 to 150 a year, and the evidence the men gave is that things are improving under the new conditions. I wish to point out that it is not all the small holders of Ireland that get the benefit—there are very large holders who get a benefit under the new conditions as well.

Land Courts.

31,604. I understand the general gist of your suggestions is that legislation should be enacted to enable the tenant and the landlord to meet upon equal conditions, and you do not want to give one an advantage over the

Mr. J. Wilkinson.
19 July 1894.

other?—I do not want a particle of property of another owner. I do not think the feeling of my county is that way either, but I want fair conditions for ourselves.

31,605. (*Chairman.*) That is only after the five years?—In respect to the sitting tenant.

31,606. (*Mr. Lambert.*) What do you say generally of the conditions?—There should be no interference with a tenant at the commencement of a new tenancy, but it is not so much new tenants that complain as old ones.

31,607. I rather thought you had not thought this matter out exactly as to the trend which legislation should follow in the matter, but the general gist of your evidence was, I thought, that the landlord and tenant should be enabled to meet on equal terms?—Yes. I do not want to go to the court if it can possibly be avoided, and what I am prepared to uphold myself most distinctly, is that the sitting tenants of my own county who have farms do not meet their landlords on fair terms. I know my own case is one such.

Fixing of rents.

31,608. (*Captain Owen Thomas.*) How are your rents fixed?—By mutual arrangement. I may say that you can farm as you like and almost under any conditions, as long as you pay more rent than the farm is worth.

31,609. What are you paying per acre now?—I think one of my farms will be about a guinea an acre, and the other about 15*s*.

31,610. When was that rent fixed?—Three years ago.

Reduction of rents.

31,611. What were you paying before then?—I was getting them down sometimes. I was 10 per cent. more before 1878. I may say the new landlord came in in 1878 and increased the rents. We had a lease for seven years, and then we got them down 10 per cent., and then there has been another 10 per cent. down since.

31,612. It has come down about 20 per cent. altogether then?—Yes; the 10 per cent. was put on in 1878, which never ought to have been put on.

31,613. Are you a tenant on a large estate?—I think the estate is worth 8,000*l*. or 9,000*l*. a year.

31,614. Are all the tenants satisfied with the reduction of 20 per cent.?—No, they are not.

31,615. Have they applied for more?—Yes, they wanted more, but they could not get it.

31,615*a*. How much more?—Five to 10 per cent. Ten per tent. would have satisfied most of them. I may say some tenants did not get so much as 20 per cent.

31,616. Are the rents paid regularly?—Yes. I think that there is not a penny of back rent on the estate.

31,617. Do you say the farmers are able to make the rents which they are paying now out of their farms?—I think in some years we may make them, but it is always rather a stretch. When our corn was destroyed more or less by the weather two or three years ago, and our sheep were more or less destroyed, we lost a lot of money. I may say I lost a year's rent in 1886-1887.

31,618 (*Mr. Everett.*) What time do you quit your farm?—The spring time.

Land laid down to grass.

31,619. Is much land going down to grass with you? It is still going on. I may say a few days ago two different men farming arable land told me they intended laying both their farms away to grass. Before I finish there is one thing I wish to draw attention to, and that is that the condition of agriculture not only affects the agricultural labourer, but it affects the village and town tradesmen as well. The agricultural labourer disappears and goes into the towns and the depression, therefore, affects the whole population of the towns and villages.

Condition of labourers.

31,620. (*Captain Owen Thomas.*) But the agricultural labourer is better off now than he was before, is not he?—Yes; but that is because there are fewer of them.

Condition of tenant farmers.

31,621. (*Mr. Everett.*) Before prices began to fall, were you getting on tolerably comfortably in your county?—I think we were getting on fairly well. There are odd cases where it might be different, but in most cases before we were satisfied with our condition.

51,622. (*Chairman.*) Do you hold under one or several landlords?—My farm is on one estate, but it passed by death, two years ago, into various owners, who have not been able to sell yet.

Mr. J. Wilkinson.
19 July 1894.

His own farm.

31,623. Then it is one estate?—One estate.

31,624. Do you hold more than one farm under that estate?—Two.

31,625. Have you had those two farms for many years?—I entered into one when I was a lad, about 33 years ago, and I took the other 10 years ago. One adjoins the other.

31,626. Ten years ago is after the commencement of the bad times?—In 1883 to 1885 the price of sheep and beef was 25 to 30 per cent. better than it is to-day.

31,627. You came into your second farm after the bad times began, I understand?—Yes, and I got 10 per cent. reduction from what the previous tenant was paying.

31,628. Do I understand that is about the reduction that other farmers have got in the neighbourhood?—The whole estate got the same reduction.

Vacant farms.

31,629. Then there are no farms unlet in your district?—I do not know one. There is no land unlet now.

Competition for farms.

31,630. In the case of small farms there is a good deal of competition for them I understand you to say?—There is a good deal of competition for them, and I have already pointed out the difficulty there is in finding investments for small capitalists.

31,631. Is there fair competition for the larger farms?—Yes.

31,632. Supposing a farm of 1,000 acres becomes vacant are there five or six applicants for it?—Yes, I think there might be. I may say this last autumn the competition has been better than for several years. I do not know the cause of that.

31,633. Are the applicants men with sufficient capital?—Yes. I may say occasionally a man appears upon the scene from the manufacturing districts and applies for a farm.

31,634. Where do the applicants come from?—They are farmers leaving their farms and people not otherwise engaged. I may say some farms in my neighbourhood are taken by people who were not farmers originally.

31,635. How do you account for people taking farms under these conditions which you have described?—That is one difficulty which I cannot account for. There has been a great deal of money invested in liability companies and shipping, and some of those things pay no dividend.

Profits in farming and other businesses compared.

31,636. Do you think that people with capital get no good investments in other directions?—They are not very plentiful.

31,637. You think farming does not pay so badly as other things then?—Those people have had no past experience—they have it yet to gain.

31,638. There must be some motive which induces them to come into farming, however?—I believe Mr. Scott, a previous witness, put it very fairly when he said that when a man had nothing but a few thousands he put it into farming. There is a good deal in that.

31,639. Does not that tend to show that after all, although the profits may be small in farming, they are better than those to be obtained in many other businesses?—I do not know that it tends to show that, but there is very great difficulty in getting investments for small amounts of capital, and a number of these people who have small amounts of capital are ready to take farms in our county.

Wages of labourers.

31,640. What is the condition of the labourers?—They are fairly well off. Our cottages have been improved.

31,641. During the last 10 or 15 years have their wages remained the same?—No, they are better. Their wages were very high from about 1871 to 1876, and then they kept falling till the year 1885 or 1886, but during these last three years they have increased. I may say I have three men at more than a guinea a week each.

31,642. How much were they increased two or three years ago?—Two or three shillings a week.

Mr. J. Wilkinson. 19 July 1894.

31,643. How much had they fallen before that?—They were much higher in connection with the great coal business—some had from 20*s.* to 25*s.* a week.

31,644. And then they fell again?—They fell down to 17*s.*, 18*s.*, and 19*s.*, and now they are 21*s.*

31,645. I suppose, considering the price of food now, the labourers are better off with the same wages than they were with the wages which they had formerly?—Yes, the prices of all necessaries of life are much lower.

Mr. J. Wilkinson. 19 July 1894.

31,646. One other question. Has this subject of judicial rents been discussed by your farmers' club?—These questions have been before the club. Judicial rents.

31,647. Was there any discussion upon them?—Yes.

31,648. And did they come to any resolution?—Not distinctly so, I think.

The witness withdrew.

Adjourned for a short time.

Mr. C. Dewar.

Mr. CHARLES DEWAR, Little Massingham, Norfolk, called and examined.

Mr. C. Dewar.

His own farm.

31,649. (*Chairman.*) You have 1,000 acres in Little Massingham, I think?—Yes.

31,650. How long have you held that farm?—Eleven years from Michaelmas.

32,651. Before that were you a farmer in Scotland?—Yes.

31,652. What part of Scotland?—Perthshire.

31,653. You came from Scotland in order to take this farm in Norfolk?—Yes.

31,654. Has the rent been reduced since you have been there?—Yes.

31,655. I think you hold that farm on the rent calculated according to the value of corn?—Yes, that is part of the hiring agreement.

31,656. Is that the original agreement?—No; that was entered into four years ago.

Reduction of rent.

31,657. How much has your rent been reduced since you have been there?—I should think about 35 per cent., roughly speaking.

31,658. And it is now fixed according to the value of corn?—Yes; that regulates my yearly rental.

31,659. Then has it been reduced considerably in consequence of fall in the price of corn?—Yes.

Corn rents.

31,660. According to the falling prices?—Yes. Should you like me to explain it?

31,661. Yes, I should?—Four years ago I hired my farm at a rental of 550*l.*, inclusive of tithe and nine cottages. At that time the average price of oats, wheat, and barley, according to the Board of Trade returns, was 28*s.* per quarter, and I agreed with my landlord then, that if prices should go up from that price for every shilling increase in value I should pay 20*l.* rise of rent, and if prices came under 28*s.* a quarter I should have a corresponding reduction. The result is that the prices are now about 22*s.* a quarter on average, which reduces my rent 120*l.*

31,662. 120*l.*, in fact, is the reduction?—Yes.

31,663. Then it has reduced your rent to 430*l.*?—Yes.

Local rates.

31,664. What are your rates?—The rates are not excessive. I think on my farm I pay something like 27*l.* a year for road and highway rates and poor rates.

31,665. Has the assessment of your farm been reduced in proportion to the reduction in rent?—I pay a higher rate now per 1*l.* than formerly, but the gross amount which I pay is less considerably than what I paid four years ago.

31,666. Then the amount of the rates is not considerable?—No.

31,667. You have no complaint to make on that head?—No.

Results of farming.

31,668. Now how have you been doing, may I ask, during the time you have been in Norfolk?—I have held my capital together and got a living; I have been able to get along.

Income tax.

31,669. Have you been assessed as to income tax upon your profits, or have you availed yourself of the right of having your profits assessed at two-thirds of your rent?—I have had it assessed on my rent.

31,670. Therefore your income tax has been reduced considerably in proportion as your rent has been reduced?—Yes, it has.

31,671. I suppose you are aware that you have the right of being assessed on your profits if you like?—Yes.

31,672. But you have not chosen to avail yourself of that?—My income tax amounts to so little that it would not be worth the trouble for any one year.

Drought of 1893.

31,673. You suffered much from last year's drought, I believe?—Yes.

31,674. That was a bad year?—Yes. Of course I restrict my evidence to Massingham.

31,675. You do not know about other parts of the county?—Not well, not being a native of the county; but that district was very much affected by the drought of last year. I should think we did not grow much more than half a crop.

Farming in his district.

31,676. How do you make the profits of your farm; Is it through crop or stock?—Everything contributes. Perhaps in some seasons barley may be the chief instrument of profit, or in some years sheep. There is no saying. We have two or three strings to our bow.

31,677. Is the district one of large farming?—Yes, entirely large farming.

31,678. And have the other farmers done about the same as you have?—Yes, as far as I can see.

31,679. As far as you can see they have held their own?—Yes.

31,680. Are there other Scotch farmers there?—Yes, my neighbour is a Scotch farmer.

31,681. Have you or your neighbour introduced any new processes from Scotland?—We have followed the customs of the country to a great extent.

31,682. But have you introduced any changes?—We have introduced the Scotch carts and Scotch system of harvesting to a certain extent, which I think is an improvement on the other.

31,683. But in the course of cultivation you have followed what you have seen around?—Yes; we have the same implements that the natives work with.

31,684. And you have followed the same course of cultivation?—Yes, we have.

31,685. (*Viscount Cobham.*) Have you much permanent pasture?—Very little. I have about 25 to 30 acres pasture.

31,686. (*Chairman.*) You do not dairy at all, do you?—No.

Wages of labourers.

31,687. What does your labour bill amount to?—Roughly speaking about 1,000*l.* a year.

31,688. Then it is considerably more than double your rent?—Yes.

31,689. And what has been the course of wages since you have been there?—Ten years ago when I entered on my farm the money wage was more.

31,690. What were the money wages then?—13*s.* a week for able-bodied labourers. A team man, viz., a horse-man got a cottage in addition to this 13*s.* a week. The labourers had only 13*s.* a week.

31,691. That was 10 or 11 years ago?—Yes, the wages in 1887 dropped to 10*s.* a week, but they have since gone up to 11*s.* That is not an average wage for the year. The men during hoeing and harvest time get more money.

31,692. It is the wages for the purpose of comparison you give?—Yes.

31,693. When did they rise again to 11*s.*?—About three years ago.

31,694. Do you say that with the fall in prices the labourer is as well off as he was 10 years ago?—Better.

Mr. C. Dewar.
19 July 1894.

31,695. How does the cost of labour compare with the cost of Scotch labour?—The individual man gets less money, but still I think the average price per acre is higher.

31,696. They are paid much higher wages in Perthshire?—Yes, but the labourer evidently gets through more work there, and there are more women employed, which reduces the price per acre.

Vacant farms.

31,697. Are there any farms unlet in your neighbourhood?—No.

31,698. And are there no small farms?—Yes, one of about 150 acres.

31,699. So that you cannot make a comparison between large and small farms?—No; the land is not adapted for small farming.

Reduction in rents.

31,700. Is the whole district in the possession of one landowner?—No; Massingham is in the possession of three landlords, the Marquess of Cholmondley, Lord Leicester, and Mr. Elwes.

31,701. Then I suppose the rents have all been reduced in about the same proportion?—Yes.

31,702–3. About 35 per cent.?—I say it is 30 to 50 per cent. in my proof.

31,704. You, of course, only compare it with what it was 11 years ago?—Yes. I think the great fall in prices took place about 10 or 12 years ago.

31,705. (*Viscount Cobham.*) Do you include the tithe in reduction of rent?—Yes.

31,706. (*Chairman.*) The landowner pays the tithe?—Yes.

31,707. Have the landlords been compelled to leave the country very much in consequence of the low prices?—In a great many instances where their income entirely depends upon land.

31,708. Have the tenants reduced their personal expenses in any form?—Yes.

Tenants' capital.

31,709. Have they reduced their capital?—In the case of a forced sale the tenants' capital of course would be reduced, but still they have the same quantity of dead stock, sheep and cattle to go on with, but prices within ten years have dropped very much on both dead and live stock.

31,710. The value of the capital in stock is reduced?—It has decreased.

31,711. But the amount remains the same?—The amount remains the same.

31,712. Do you say that generally of your district?—Yes.

31,713. That the farmer's capital remains the same in quantity?—Yes.

37,714. That is in stock and so forth?—Yes.

37,715. But the value has been reduced?—Yes.

37,716. Then any new tenant coming in with fresh capital would come in at an advantage?—Certainly at an advantage.

Reduction in number of labourers.

31,717. Has there been any reduction in the number of labourers?—Yes, to a certain extent, on account of bad times. Any men that would be kept on, perhaps for charity, have been dispensed with, and there is less philanthropy in the way of looking after old men and that sort of thing.

31,718. What reduction in the number of labourers is there on your farm—any?—No, I think I have just about the same quantity as when I entered.

31,719. Of course as there is no land laid down in grass, there is no reason for reduction?—No, it would not answer the purpose.

Economy of labour by use of machinery.

31,720. You have not introduced any new machinery which would dispense with labour, have you?—Yes, in harvest I have done with less men. I used to have as many as 24 harvest men, and now with binders I can do with 17, besides odd hands.

71,721. Is that on account of the introduction of machinery for binding?—For binding; and also I use elevators in stacking, and I employ all the machinery that I can profitably do in harvest work.

71,722. What economy in money has that effected in gathering in the harvest?—Very considerable economy. The harvest man receives 7*l.* each at present. For the difference between 17 and 24 men that would be 49*l.*

31,723. That is the economy effected amount of the?—Yes.

Mr. C. Dewar.
19 July 1894.

31,724. (*Mr. Everett.*) There is the cost of machinery to be set against that?—There is, and the interest.

31,725. And the cost of keeping it up?—Yes.

31,726. (*Chairman.*) What should you say altogether. Should you have made an economy of 40*l.*?—40*l.* I should say.

71,727. And have your neighbours effected the same economy?—Yes, they have effected the same economy.

31,728. That is a very important economy?—Yes.

Land out of cultivation.

31,729. Has any land gone out of cultivation?—No, no land has gone out of cultivation in Massingham.

31,730. Is the land as well farmed as it was 10 years ago?—Apparently.

Changes of tenancy.

31,731. Have there been any changes in tenancy?—I know two instances in the district I speak of, but the farms were immediately taken up at the old rents—at the retiring rents.

31,732. Immediately taken up at the rent which the subgoing tenant paid?—Yes.

31,733. Were they men with capital ready to come in who took them?—Yes, because the farms were rather good and the conditions on which they could hire them were good.

Condition of farmers and trades people.

31,734. Has the depression told upon the village trades people?—Yes.

31,735. I suppose the farmers have effected economies?—Yes.

31,736. And they have not lived up to the same style, and so the village tradesmen and people have suffered?—Quite so.

Corn rents.

31,737. I suppose if the price of corn should be further reduced you would get a further reduction in your rent?—Yes, personally that is.

31,738. Has that system of fixing the rent been adopted on other farms in your neighbourhood?—Not that I have heard of. It was merely a suggestion of my own that my landlord fell in with.

31,739. Have your neighbours, do you know, got a proportionate reduction of rent or not; you told us that you, four years ago, adopted this new principle and your rent was then 550*l.*, and since then it has been reduced to 430*l.* on the sliding scale?—Yes.

31,740. Have your neighbours got the same proportion of reduction although they did not adopt the sliding scale?—I cannot talk exactly of that, but I think they have had reductions.

31,741. Abatements perhaps?—Yes, abatements.

Gambling in corn.

31,742, Then what do you attribute the low price of corn to?—The chief cause is, of course, the large importation of corn, and I have also a theory that some other people have that the gambling in the American markets has had a very serious effect on the price of corn.

31,743. Do you think the American wheat markets regulate the English market?—Yes, most decidedly.

31,744. And you think that this gambling produces its effect here?—Yes.

31,745. Is the wheat you grow equal to the American wheat or not?—It is a different class of wheat, it is not so dry. The millers like a certain proportion of English wheat to grind with foreign wheat as the foreign wheat is too steely and dry and our wheat amalgamates with it and helps it to grind better and make better flour.

Barley growing.

31,746. Do you grow much barley?—Yes, a considerable quantity of barley.

31,747.—Is your district favourable to the growing of best malting barley?—With favourable seasons it is.

31,748. Then the goodness or badness of the season has an important effect I suppose?—Very important. If the barley is of good quality it does for pale ales or for Burton, and if not it has to go to local maltings, which reduces the price considerably.

Reduced expenditure in farming.

31,749. Then has there been any reduction in the general expenditure of the farm by the farmer?—Do you mean in regard to labour?

31,750. Yes, and in keeping up the farm generally?—It has not increased.

Mr. C. Dewar.

19 July 1894.

31,751. Has there been any reduction in the expenditure in that direction I mean?—Yes, decidedly.

31,752. Has it affected really the cultivation of the farm, or has it really mainly produced an effect on the appearance?—The savings that have been effected have been effected a good deal in this way, that farmers buy cakes and manures more carefully than they used to. In good times, farmers spent more than was necessary in growing a full crop. They do not expend lavishly; they only expend where necessary, and they look very sharply after any expenditure in that way.

31,753. In your notes I see you say there has been a reduction in the expenditure on hedge trimming, keeping borders, weeding corn, and so forth?—Yes, that is in the labour department. We have dispensed with a lot of that labour that we used to have when prices were better.

31,754. Has it affected the yield?—No, not that I see.

31,755. (*Viscount Cobham.*) Have you given up weeding corn?—We do it in the green crop every fourth year, and that keeps the weeds very much in check.

31,756. You think that is sufficient?—It keeps the weeds in check. Other weeds in the barley do not affect it so materially.

31,757. (*Chairman.*) And do you say that looking all round the production of the land has been decreased or not?—With a good season, taking this year in particular I think the district I speak of has never looked better.

31,758. This is, of course, a very favourable season?—Yes.

31,759. Should you say, looking all round, that the farming is as good as it was?—Yes, cultivation and farming.

31,760. And tenants appear to have sufficient capital?—They appear to have sufficient to get on with.

Freedom of cropping and sale of produce.

31,761. Is there freedom of cropping and sale of produce?—In my own instance I have absolute freedom of cropping and sale of produce, and as far as I can see my neighbours have the same, and they sell straw and so on.

31,762. Do you sell straw?—Yes.

31,763. And has that right of sale of straw effected any material reduction to set off against the low price of wheat?—Very much so, especially in a year like last year.

31,764. (*Viscount Cobham.*) Have you got a fair market for straw?—We have not, but last year was an exception in the way of a season; there was a famine of straw and the demand extended into our districts, so that we had a very fair market indeed for straw.

31,765. (*Chairman.*) What do you sell your straw at?—3*l.* at my station, free of expense.

31,766. How much do you grow on an acre?—A good season will give a ton to the acre and in a very bad season about half a ton.

31,767. (*Viscount Cobham.*) How much will the cost of carriage amount to?—It is produced here in evidence. Under the railway rates I say it is very prohibitive. The carriage of a ton of straw is 26*s.* on bound, 12*s.* 6*d.* on pressed straw from Massingham to London, a distance of 100 miles.

31,768. Would it pay you to get 2*l.* a ton for straw?—Yes, I consider that anything over 2*l.* is better than making it into manure, provided you can get a substitute on to the farm.

31,769. (*Mr. Dalton.*) Last year you got 3*l.* you say?—Yes.

31,770. (*Mr. Everett.*) Did you pay the binding?—No.

Cattle fattening and exclusion of Canadian stores.

31,771. (*Chairman.*) The district, I suppose, is not adapted for breeding cattle?—No.

31,772. You mostly buy your cattle in the autumn, I understand?—Yes.

31,773. Do you feel any difficulty from the inability to buy Canadian store cattle?—Yes.

31,774. Do those cattle from Canada pay well for fattening?—Yes, that is my experience.

31,775. And do you consider it is important, if possible, to have that market restored?—For a county that is a non-breeding county like ours depending upon an autumn supply of stores decidedly I do.

31,776. Do they fatten faster and better than English and Irish store cattle?—That is my experience.

Mr. C. Dewar.

19 July 1894.

31,777. What do you consider is the loss per head on bullocks from the absence of Canadian store cattle?—I consider it was 2*l.* each last year.

31,778. 2*l.* a head?—Yes.

Winter dairying.

31,779. Do you think some relief might be brought about by winter dairying?—Yes, that is my impression.

31,780, Have you tried it yourself?—I have not tried it, but I can see how it could be worked out.

31,781. You think it is a thing that might be tried? It might be tried with advantage, because in many seasons we have to fatten bullocks at a loss, and there is always a demand for milk, especially in the winter time.

31,782. Do you propose to try it?—I have thought of trying it this winter.

Poultry rearing.

31,783. Do you think more might be done in the way of keeping poultry?—Yes.

31,784. Has the price of poultry been maintained?—Yes, the price of poultry is higher than when corn was twice the price it is now. There is an unlimited demand for fresh eggs especially. That is within my personal experience, as I keep a great many hens and send the eggs to London, and it pays very well.

31,785. I suppose it is mainly on the small farms that you would look for any great extension in that direction?—By no means. I think it could be quite applied to large farms. My own experience is, I have built a lot of small poultry houses and put them over the farm and employ a man on commission to go and get the eggs.

31,786. Is the poultry farm an important item in your receipts?—Yes, it has paid better than any branch of stock this last year or two.

31,787. What have you made in a year by poultry?—This year I will get as much 150*l.* for hens' eggs, and I should not think the gross expenditure for that would be more than 70*l.*

Marking of foreign and colonial meat.

31,788. Do you consider that the marking of foreign and colonial meat is important?—Yes, I do.

31,789. Do you think that the farmers lose a good deal by their methods of selling stock?—Yes, I am quite sure of it.

31,790. What do you do yourself?—I am forced to sell under the existing condition of things, but if a farmer only sells fat stock three months in the year he is bound to be at a disadvantage with butchers selling and buying them every day all the year round.

Extension of sheep breeding.

31,791. Then do you think, inasmuch as the price of mutton compares well with the prices of other articles of produce, that there might be more extension of the breeding of sheep?—Yes.

31,792. Have you extended your own flocks yourself?—I have always started with as many sheep as my farm could conveniently carry, and I have kept it up, and it would be a great error to overdo a farm with sheep.

Corn rents.

31,793. Then do you recommend your scheme of a scale of rents according to the price of corn, as a method which might be generally adopted?—I find it works out very satisfactorily.

31,794. You find it works out well?—Yes.

31,795. I suppose in former times it might not have answered so well, when the price of corn varied according to the harvest?—I do not think so. I have always told my landlord I would much rather pay him an advance of rent than a reduction, because it would be more advantageous to me.

31,796. But you might have a high price of corn with a bad crop?—There might be that circumstance, but still that would be the exception.

31,797. That has not been the rule of late years?—No, except last year.

31,798. But it used to be that the price of corn rose and fell with the harvest?—Yes, but that is not the experience of recent years.

31,799. But of late years that has not been so?—No.

31,800. And you think, therefore, that the argument in favour of corn rents is strengthened?—Yes.

Judicial rents.

31,801. Has the question of judicial rents been discussed in your neighbourhood?—No.

Mr. C. Dewar. 19 July 1894.

31,802. Have you formed an opinion upon it yourself?—I think it is totally unnecessary. The arrangements come to between landlord and tenant are quite satisfactory, so far as I can see.

31,803. You have found no difficulty in making a bargain yourself?—No difficulty at all.

31,804. Do you hold on a yearly tenancy?—I have an eight years' lease, four years of which is run.

Leases.

31,805. Are leases common in the district?—No, I think not. I think they have gone more out of fashion lately; they are mostly yearly tenants.

31,806. That is on account of the uncertainty of tenure, I suppose?—Partly, but also because we pass through great changes.

31,807. And you have provided against that by your system of rent, according to corn valuation?—Yes.

31,808. Before you were able to make a lease?—Yes.

Sliding scale for rent.

31,809. (*Viscount Cobham.*) Does that corn valuation take effect every year?—Yes, it is in every year's rent.

31,810. (*Chairman.*) Then have you any general recommendations to make with a view to the depression in agriculture?—I think I have stated in my proof most that I know of as to remedies. The chief thing is the railway rates. I think it would be a great boon to any corn-growing district if we could have a free interchange of products—selling straw and receiving town manure. I believe, up to a certain point, on the Great Northern Railway they take London manure at a very low rate, but that has not been extended to our neighbourhood yet. It is 7*s.* 6*d.* a ton yet, I think. A large quantity would be taken up if delivered at our station at 3*s.* 6*d.* per ton.

Cost of reaping and binding by machinery.

31,811. (*Mr. Everett.*) In regard to what you say about using this reaping and binding machine, about how many acres of corn do you cut with it in a year?—About 100 acres, I should think.

31,812. How much does the string cost per acre?—It depends upon the crop very much. A large crop requires very much more string than a small one, but I should think on an average it is about 1*s.* 3*d.* an acre.

31,813. Then you require oil, do not you?—Yes.

31,814. And do not you have a good many repairs to do?—Not as yet. Of course, my machines have not been very long in use, but in time there will, of course, be more of that. I should think oil and repairs would amount to about 5*l.* a year.

31,815. Then your machine will wear out in 10 or 12 years altogether probably, would it not?—Yes.

31,816. And should not you set by 10*l.* a year or something like that for that purpose?—I do not know, if I spend 5*l.* a year in keeping it up, I should not. With that liberal allowance for repairs, that should keep it up. I have now horse reapers in my possession that I have had 10 years and they are as good as ever, but I have, of course, always kept them in good repair.

Sale of fat stock.

31,817. In regard to selling fat stock, have not you good auctions in your district?—Yes, we have.

31,818. And do not you think if a man sends little and often to them he could get full market value?—Quite so. I think if one sent regularly all the year round you would arrive at an average, but the Norfolk season for fat stock really only extends to three or four months. We have not the advantage of an all-the-year-round season. We buy stock and sell them directly they are fat, before the grass cattle come in.

31,819. That is our Suffolk custom too, and some of the keenest farmers I have known have told me that by selling little and often they have done better than by selling privately, and they have made the full market value. Do you agree with that?—I think so too, if I had 50 markets in the year, that is, sold once a week, all the year round.

31,820. What part of Norfolk is Massingham in?—West Norfolk.

31,821. Do you know Mr. Clare Sewell Reed—by name, at any rate?—Yes, only by name.

Decadence of agriculture in Norfolk.

31,822. When he was here he said there had been a great decadence of agriculture in Norfolk, and he spoke of the land not being farmed near so well as it was, and he said he thought that was much more because of the losses of the tenant than because of bad landlords or anything else. What do you say?—Of course my experience only goes back 10 years in Norfolk. No one is better qualified than Mr. Reed to talk on Norfolk agriculture, and what he said I am sorry to say is only too true of a very wide area of Norfolk, and what I should say also, applying my examination to Norfolk as a county, but not to Massingham as a district.

Mr. C. Dewar. 19 July 1894.

31,823. He speaks of land, in fact of all the land he had known improved in Norfolk, having now relapsed to the condition it was in before the improvements commenced, but your experience really did not begin till the depression had very decidedly established itself?—Yes, that is so.

31,824. (*Viscount Cobham.*) I think he said the prospect is one of absolute ruin to farmers?—I do not say it is one of very great prosperity, but I do not see any reason why light land farmers should not make a living, even in these times, if they have a fair hire and adapt themselves to the times.

Prices of corn, wool, and meat.

31,825. (*Mr. Everett.*) You speak in your syllabus of receipts from the sale of corn being less?—Yes.

31,826. Are not the receipts from also wool and meat less as well?—Corn includes wheat.

31,827. From wool and meat?—Yes, very much less; I should think 30 to 40 per cent. less.

31,828. The whole produce of the farm practically is lower?—Yes.

Effect of American markets on prices.

31,829. Then you speak of the American wheat markets altogether regulating the English ones?—Yes.

31,830. Curiously enough, we had a gentleman here who was very familiar with American markets, and he told us that the English market regulated the American?—What I say is that if we go to market with our samples of corn the merchants always hold out the state of the American markets as regulating the price they are going to give for it.

Condition of farmers in his neighbourhood.

31,831. (*Mr. Dalton.*) Do you know many farmers in your neighbourhood who have been ruined?—No, not in the district where I am. Still plenty have lost all their money within the last 20 years.

31,832. Are they mostly the same farmers who were holding some years ago?—There have been two changes in occupation in my neighbourhood since I went there.

Particulars of his own farm.

31,833. Do you know what the tithe is on your farm?—5*s.* 6*d.* an acre.

31,834. That leaves very little rent to your landlord?—Very little, indeed, but, however, he augments it considerably by letting the shooting.

31,835. Do you know what the shooting is let for?—I cannot say, exactly.

31,836. Is there a good residence on the farm?—Fair only.

31,837. How far are you from a market town?—Twelve miles.

31,838. What is your market town?—King's Lynn.

31,839. Then you are badly situated with respect to markets?—Yes, as the local railway rates are high.

Condition of farmers in his neighbourhood.

31,840. And notwithstanding that, you think farmers in your neighbourhood have been able to hold their own?—I cannot say we are very badly situated with respect to markets. We have a station within a mile of our farm. We are badly situated with regard to local railway rates. The railway rate from King's Lynn to Massingham is very excessive. We find we can cart our corn by waggon cheaper than we can carry it by paying the local railway rates.

31,841. (*Chairman.*) What is your union?—Freebridge, Lynn.

31,842. (*Mr. Gilmour.*) You said just now the shooting was let in this place?—Yes.

Damage by game.

31,843. Is there much complaint of game damage in that part of the country?—No, none, because we have the ground game ourselves—rabbits, and so on.

31,844. And by putting the Ground Game Act in force you are able to protect yourself?—I do not require it in my hiring. I have the rabbits absolutely. I am allowed to get the hares if they interfere with my crop in any way.

Ground Game Act.

31,845. But you can only do that under the Ground Game Act?—Yes, I suppose so, if it came to a legal point, but it never has required decision.

Mr. C. Dewar

19 July 1894.

31,846. But you have not the right to go into covers and shoot hares, have you?—No, only on my land.

31,847. You are then under the Ground Game Act?—Yes.

31,848. And that protects you sufficiently, you find?—Yes, quite sufficiently.

31,849. Is there much ground game there?—There are a good many rabbits in the sheep walk on the heath, but we have them netted off, and they do not interfere with the crop to any extent.

Importation of Canadian and American cattle.

31,850. You are an advocate for the introduction of United States and Canadian cattle for feeding purposes, I think?—Yes.

31,851. I suppose you only advocate that if it is absolutely certain that they are free from disease in those countries?—Yes, quite so.

Freedom of cropping.

31,852. You stated also that you had freedom of cropping on your farm?—Yes.

31,853. But you have stated that you followed the custom of the country in your farming?—Yes.

31,854. Therefore the custom of the country under which the farms round about are carried on, is in your opinion a good mode of farming for that district?—Yes, very good.

31,855. Then the leave as to freedom of croppping in that country does not really convey very much benefit to you?—To this extent, as last year was a very bad season through drought and so on our small seeds failed, but in that case we could plough up those layers that had failed and put in a crop of corn. or we could put in a crop of corn if we had a piece of land in good condition after wheat, or grow two corn crops in succession, but any great departure from the four-course system is not advisable, I think.

31,856. Supposing freedom of cropping was given to the farmers of that district, there would not be very great departure from the present system?—No.

31,857. (*Chairman.*) You could not teach them anything from your Scotch experience?—No, I do not think so. I think the Norfolk four-course system takes a good deal of beating.

Reductions and abatements of rent.

31,858. (*Mr. Gilmour.*) Have difficulties in regard to rents in that district in these depressed times been fairly met by the landlords, in the shape of reductions and abatements?—Yes.

31,859. Then the old tenants as a rule are remaining on on their farms?—I am only talking of within 10 years. Of course, the tenants previous to that had gone and there have been fresh ones in that time. There have been some tenants more than 10 years there and they are there still.

31,860. You advocate the fixing of rent upon what is called the Fiars prices in Scotland, or what is tantamount to that?—Yes.

31,861. You are aware that rents not so long ago were fixed in that way?—Yes.

31,862. And you are aware that it is chiefly by the desire of the tenants in Scotland that that was done away with?—Yes. I suppose there would not be quite such a drop in the price of corn then as there has been within the last 10 years.

Corn rents.

31,863. But where you have a mixed husbandry it would be necessary to draw out a list of a good many more articles upon which the rent should be fixed than grain alone?—Yes, but I refer to a corn-growing district.

31,864. But would it be practicable to carry that system out in the generality of the farms of the country?—I do not know. I have not seen it tried generally. I have heard of it being tried, but in my own experience we are quite satisfied that it is a fair thing as between landlord and tenant, where corn is the principal product.

31,865. Yours being a purely corn-growing district?—Yes.

Sale by live weigh

31,866. You are in favour of selling by live weight?—Yes.

31,867. And you would like to see it more general than now?—Yes, I should.

31,868. Would you like to see it compulsory?—Yes, I would like to see it compulsory.

31,869. You think the tenant that fed cattle would be upsides then with the butcher?—Yes, on a more level footing.

Mr. C. Dewar.

19 July 1894.

Poultry rearing.

31,870. Then with regard to the poultry department, do you say that you have had a good balance sheet from that?—Yes, I have found it paid last year.

31,871. In putting poultry houses down on different parts of the farm how many fowls do you allow to each house?—About 25 hens in a house.

31,872. Does the one person go round in the morning to superintend them?—Yes, I have a man and his family in an off building, and I allow him a commission for gathering eggs and looking after the hens, and he does all the work.

31,873. How many hens will he have to look after?—About 300 hens, I think.

31,874. Of a mixed sort?—Yes, a mixed sort.

31,875. What do you get for your eggs on an average?—About 1*d.* a piece clear.

31,876. Do you find that makes a balance sheet which pays well?—Yes, very well indeed.

Sale by live weight.

31,877. (*Mr. Giffen.*) In what way would you make the selling of cattle by live weight compulsory; what would be the nature of the compulsion?—I cannot say that I have just thought of any special system, but at present as the law exists there is bound to be a steel yard erected in every market town in order that cattle should be weighed and the weights registered and known if wanted. I have seen instances where it has been done, the farmers have had their cattle weighed, but directly they come into the market they are in a measure boycotted; the butchers do not care about it, and do not encourage it in any way, so that altogether it has become a dead letter.

31,878. However, the practice of selling by live weight seems to you to be a good thing?—Yes.

31,879. (*Sir Nigel Kingscote.*) Perhaps you would like to see weighing machines compulsorily set up in every market place?—Yes.

31,880. (*Mr. Giffen.*) You have them now at every market?—Yes, at our market, anyhow.

31,881. Would you make it a punishable offence to sell cattle by some other mode than live weight, or how would you do it?—I should not care to go that length. I would recommend the Government to take up repositories, and only sell by live weight. I am under the strong impression this would make the system fashionable, and eventually be a paying thing for the Government.

31,882. (*Mr. Dalton.*) Could you require all the cattle that come to the market to be weighed, whether sold by weight or not?—Yes, it could be done.

31,883. Would it be very inconvenient?—I do not think so.

31,884. (*Mr. Giffen.*) But that would not be compulsory sale by weight?—No.

Gambling in corn.

31,885. Have you made any calculation in respect to the loss in price that has arisen through the gambling in American markets that you speak of?—I cannot say; that is merely an opinion of my own, that is shared by a good many others. I must think that the selling and buying of corn that has never been grown and the agitation and excitement that is caused by this gambling must affect the real solid article that is to be had and handled.

31,886. But you can form no estimate as to what the difference of price is to you in consequence?—No.

31,887. Whether it is 1*s.* a quarter, or 2*s.* a quarter, or any other price?—No, I cannot.

31,888. And, of course, you have not settled the question of the effect of such operations generally in other markets as well as the markets for corn?—No.

Corn rents.

31,889. With regard to the sliding scale of rents, rents going up and down according to the price of corn, is your idea that upon a sliding scale of that kind being adopted, rent should go up 5 per cent. if there has been a 5 per cent rise in price of corn, and that it should go down 5 per cent. if there is a 5 per cent. fall in price?—Yes.

31,890. It is a purely arithmetical proportion of that kind that you have in mind?—Yes.

31,891. Would it not happen sometimes that if the price of produce were to go down 5 per cent. then, in

Mr. C. Dewar. 19 July 1894.

order to make things equal, rents should go down somewhat more than 5 per cent.?—No, I do not think so, because the rent is only one item of the expenditure in connection with a farm, and I do not recommend the system on all produce, but only on corn in corn-growing districts.

31,892. But 5 per cent. on produce would amount to much more than 5 per cent. on the rent if you take it away without compensation?—Perhaps it would.

31,893. You do not see any difficulty of that kind in applying a sliding scale generally, do you?—No, in my own case there has been no difficulty arising from that.

31,894. How are the prices ascertained in your own case?—By the average return of the Board of Trade.

31,895. That is the Board of Agriculture?—Yes.

31,896. Taking the weekly prices of wheat, barley, and oats?—Yes.

31,897. But if you were extending it to other products you might have some difficulty in finding the prices to be taken?—Yes, in the case of cattle and sheep it would be very difficult, I should think, to get it.

Scotch farmers in his neighbourhood.

31,898. (*Mr. Whitehead.*) Have the other Scotch farmers in your neighbourhood done equally well with yourself?—They came 11 years ago, and they have all their stock and crop on the land, and they seem to be holding themselves together, but I cannot say how they stand exactly.

31,899. Have you and your Scotch friends done better than the natives?—No, I do not think so.

31,900. Not at all?—No, I do not think so. There is no reason to think so.

31,901. You spoke as to introducing new systems of agriculture, and you said that you had not introduced any, but you forgot the system of poultry-keeping, I think, which brought in 150*l.* a year. That is new in that district, is it not?—No, there are several poultry ventures on a small scale.

31,902. Equally prosperous with your own?—I should think so—yes, because they seem to increase their quantity of poultry.

Poultry rearing.

31,903. (*Viscount Cobham.*) Do you include geese when you speak of poultry?—What I cultivate chiefly is an egg trade. I keep hens for eggs chiefly.

31,904. There is a large production of geese and turkeys in Norfolk, is there not?—Yes, but it is chiefly in the Fen district—geese are fed on the grass lands.

Condition of farmers in his neighbourhood.

31,905. (*Mr. Whitehead.*) I do not think you have told us how far round your district this comparative prosperity you have described extends?—Massingham is a district of about, I should say, roughly speaking, 6,000 acres.

31,906. Would not your description extend further than that—to the whole of the county?—I should not like to talk of any district outside of that. I could not say exactly not having known the county for so long a time, and undoubtedly there is great depression in some districts of Norfolk on the very heavy lands and very light blowing soils.

31,907. Would it extend to the western part?—My farm is situate about the middle of the western part of Norfolk.

31,908. Would it apply to the whole of the western part of Norfolk?—I cannot say, circumstances vary very materially, even within a few miles' distance.

31,909. Are we to understand it would only apply to a small district?—I cannot speak of any part beyond my own district.

31,910. Your evidence is so different from Mr. Read's evidence that it makes one think that it could only apply to a small district, comparatively speaking?—One reason why I think that farming is comparatively prosperous in our district of Norfolk is that the land is light. We have a very small horse labour bill, two horses can plough more than an acre a day, therefore we do not require to keep such a strong force of horses to cultivate the land.

31,911. (*Viscount Cobham.*) Two horses will plough more than an acre a day?—Yes, two horses will.

31,912. (*Mr. Whitehead.*) The land is lighter than other land is it?—Yes, but not too light. It is a fair mixture. It is easily worked.

31,913. You suggest the County Council should provide for the giving of lectures on poultry breeding, I think?—Yes.

Mr. C. Dewar. 19 July 1894.

31,914. Have they done that at all?—Not in our county.

Lectures on poultry rearing.

31,915. Do you think it would be desirable that they should?—I think so.

31,916. And with regard to what you call winter dairying, will you tell the Commission how you would work that? What would you do with the cows in the summer?—Of course that would alter our system to a certain extent. We would require to grow some vetches or green stuff for the summer to keep them through, but I would have them as much as possible come into profit in October, or in the winter time, and have the benefit of the milk trade then.

Winter dairying.

31,917. Having no pasture there, you would have to find green stuff in the summer time?—Yes.

31,918. But you think even then the system would pay?—I think it would. It is my strong impression it would, although I have not tried it.

31,919. Would it, do you think, apply to many other districts in England where there is not much grass land?—Yes, I think it would, if it has corresponding conditions.

31,920. (*Viscount Cobham.*) Would not you have to feed your cows largely on roots?—Yes, but of course we have the roots.

31,921. But would not that affect the quality of the milk?—By steaming and pulping with the addition of artificial foods it would lessen that I should think.

31,922. It is a difficulty that is found at present in Norfolk, is it not?—I do not know any case where there is dairying in Norfolk in which they have had much complaint of turnipy milk.

31,923. Norfolk butter is not of very high quality is it?—No; but I do not advocate a butter, but a winter milk-trade.

His own farm.

31,924. Did you find any disadvantages from your nationality when you first came into Norfolk with your men or in other ways?—No; not at all.

31,925. Did you bring any Scotch labourers?—No, none.

31,926. You think you have had a fair chance throughout?—Yes.

31,927. Do you hold under one landlord or more?—Only one.

31,928. You say you cannot breed stock in Norfolk because of the want of grass and the dryness of the climate?—That is cattle, but it is admirably adapted for sheep-breeding.

Cattle breeding Scotland.

31,929. Did you breed stock when you were in Perthshire?—Yes.

31,930. The conditions being more favourable for it there?—Yes.

31,931. But there are many parts of Scotland where they do not breed?—Yes.

31,932. What are the disadvantages of those districts?—Of the non-breeding districts?

31,933. Yes?—I should think the same as ours—a lack of store cattle when they want them, and they consequently have to give a high price for the few stores in the market.

31,934. There is generally grass and a moist climate in Scotland, is there not?—As to the moist climate that does not apply so much to the eastern counties. The rainfall is less there than in the western counties, the same as in England.

Position of his landlord

31,935. I see after the landlord has paid the tithe rent-charge there is only about 150*l.* a year rent left to him from your farm?—Yes.

31,936. I suppose this year when the calculation is made the rent will be appreciably lower than it is now?—I think the corn prices are just about the same as they were last year—23*s.* about.

31,937. Wheat has reached its lowest?—Yes, but oats have kept up the average. I do not think there is more than a shilling difference in the average price.

31,938. Upon the farm the landlord has to pay income tax?—Yes.

31,939. And to do repairs?—Yes.

Mr. C. Dewar. 19 July 1894.

31,940. I suppose you would hardly say he does it out of the rent at all?—There is the shooting rent to fall back upon. That is a good rent. That would keep up repairs.

31,941. That includes the house, does it not?—No, I have the house. My landlord lets his mansion house but he lets some other shooting with it.

31,942. Do not the figures point to the probability of a good deal of land even in your district going out of cultivation?—It has not set in yet, land going out of cultivation in Massingham.

31,943. But do not you think with any further reduction of the margin of rent that much land will go back into a state of nature in North Norfolk and West Norfolk?—Yes, I should think so, because the rents are certainly very low.

31,944. (*Mr. Dalton*). Does the landlord pay the land tax?—Yes.

31,945. In addition to the tithe and income tax?—Yes.

31,946. The land tax is high with you, I think?—I do not know.

31,947. Mr. Reed stated it was high?—I should not think in our district it would be very high.

Maintenance of buildings.

31,948. (*Viscount Cobham*). So far, have the buildings been well maintained?—Only fairly well. The buildings are not good.

31,949. Obviously that would become a greater difficulty as time goes on?—Yes.

Profit and loss account on his books.

31,950. (*Chairman*). Do you keep a careful balance-sheet year by year?—No. I do not keep very accurate books. I have done so, but I found it was of no practical use to me as a farmer, as I have no book debts; everything I sell is for cash, and I have a clear idea of it, and a good memory for business transactions.

Mr. C. Dewar. 19 July 1894.

31,951. Do you not make out a profit and loss account at the end of the year?—Yes.

31,952. And do you value your stock for that purpose?—No, I just have the same stocking on the farm and value that.

31,953. You take the stock as being of the same amount each year?—Yes.

31,954. And you make the profit and loss account vary with the outgoings and incomings?—Yes.

31,955. Therefore you do not deduct for your loss, any reduction in the value of your stock?—No, it is a very difficult thing to do because there is nothing varies so much as the price of stock. In a week live stock may go up 10 per cent. or fall 10 per cent., or within six months live stock may be worth 30 per cent. more.

31,956. I think you said that although wages were much higher in Perthshire than in Norfolk, yet the labour bill is about the same?—Yes.

Wages in Perthshire and Norfolk compared.

31,957. That would tend to show that the higher priced labour is more effective and more efficient than the low priced labour?—I do not know that it is that altogether. There are women employed in Scotland where they are not in England, and what we do with men here is done by women in a great many instances in Scotland.

The witness withdrew.

Adjourned to to-morrow at 12 o'clock.

Fifty-fifth Day.

Friday, 20th July 1894.

PRESENT:

SIR ROBERT NIGEL FITZHARDINGE KINGSCOTE, K.C.B., IN THE CHAIR.

Viscount COBHAM.
The Right Hon. HENRY CHAPLIN, M.P.
ROBERT GIFFEN, Esq., C.B.
CHARLES ISAAC ELTON, Esq., Q.C.
Captain OWEN THOMAS.
FRANCIS ALLSTON CHANNING, Esq., M.P.
JOHN CLAY, Esq.
ROBERT LACEY EVERETT, Esq., M.P.
JOHN GILMOUR, Esq.
GEORGE LAMBERT, Esq., M.P.
WILLIAM CUTLACK LITTLE, Esq.
WALTER HUME LONG, Esq., M.P.
CHARLES WHITEHEAD, Esq., F.L.S.

HERBERT LYON, Esq., *Secretary*.
R. F. CRAWFORD, Esq., *Assistant Secretary*.

Mr. HENRY R. FARQUHARSON, M.P., called and examined.

Mr. H. R. Farquharson, M.P. 20 July 1894.

His own farm.

31,958. (*Sir Nigel Kingscote.*) You are a Member of Parliament for West Dorset?—Yes.

31,959. A landowner in Dorset?—Yes.

31,960. Farming how many acres?—About 800 just now.

31,961. Is that likely to be increased?—I know it will be increased at Michaelmas.

31,962. I think one object of your coming here to-day is to give your opinion as to the result of the establishment of frozen chambers in different market towns?—Yes, I was anxious to offer a suggestion on that point.

31,963. I may ask first of all—I am aware of it myself, but the other Commissioners are not—you farm, I believe, largely for the sake of dairying?—I farm a dairy, and in addition to that it is a corn and sheep farm as well. It is mostly arable land that we have.

Mr. H. R. Farquharson, M.P. 20 July 1894.

Frozen chambers for agricultural produce.

31,964. Then are these frozen chambers to contain every sort of agricultural produce—meat and dairying?—Yes.

31,965. What is your proposal?—I think that if we have some frozen chambers at moderate sized agricultural centres farmers might utilise them in years when keep was short and when they have a number of lambs to sell in the fall of the year. They very often now have to sell them at such a price that if they were killed they would not be selling at more than about 3*d.* or 2¾*d.* per pound. I think if these chambers were established the farmers could kill these lambs, or other people could buy them and kill them and put them into these chambers dead and sell them as lamb mutton, when there was not such a glut upon the market, at a great deal better price than the 3*d.* per pound. As regards beef, I am told that beef does not keep so well as mutton and will only stand being

chilled, but that keeps for six weeks well when it is chilled. A great deal of the coarser sort of meat is very often ripe for death at the end of September or early in October. If that was killed instead of being kept alive at great cost until about Christmas time there would be a great saving of keep, as the expense of keeping it in these frozen chambers is very small indeed.

31,966. Your object would be to more equalise the market?—Yes, and it would enable farmers in the country generally to keep a great deal more breeding stock, because it is in the winter months when the amount of stock a man can keep has to be cut down.

Frozen chambers for milk and butter.

31,967. Do you propose that these chambers should also hold dairy produce?—As far as the dairy produce is concerned, I thought that instead of butter being salted as it is now, it might very well be kept there with very much less per-centage of salt. And in addition to that, if butter in the summer time was chilled in one of these chambers it would become very much firmer for railway carriage; farmers could keep their butter there for a week or two until they got the ton rates of freight. The way I think it would be most useful for dairy farmers is that it would bring people's milk within the limits of the London market, because milk which is chilled will keep for two or three days afterwards as fresh as the fresh milk. In countries such as I live in, Dorsetshire, we cannot send our milk to London owing to the length of the railway distance—it will not get there fresh; but if we had this system of chilling it, every dairy farmer could take his milk in and have it chilled and then send it to London in the course of the next day.

31,968. Let me take your own case: I happen to know your place, but the other gentlemen do not. Where would you put one of these chilled chambers?—I should put one in Blandford.

31,969. How far are you from Blandford?—About 4½ miles.

31,970. Therefore you would be enabled to send your milk to Blandford once or twice a day?—Yes, and place it in this chamber to have it chilled. It could go off that night or the next day and would arrive here in London and keep then perfectly fresh for two or three days. I am informed that in several of the large dairy factories they do chill their milk now before they send it up.

31,971. Have you any idea how long it will keep when it is chilled?—I was asking yesterday, and I was told it would keep three or four days perfectly as fresh as the freshest milk.

31,972. How would you propose that these buildings should be erected—who is to pay for them?—In the first instance I think the Government ought to give us an experimental one or two in different districts; but after that I should have thought it would have paid the corporations of these towns to build them.

Tariff for storage in frozen chambers.

31,973. I conclude that you propose that a tariff should be paid for the storage of whatever is put into it, whether it is meat or whether it is dairy produce?—Of course it would be paid for by the farmers or the persons who put any produce in.

31,974. They would have to pay a tariff?—Yes.

31,975. And that tariff you would suggest should be sufficient to support the building?—Yes, and to pay a decent profit on it. It ought to.

31,976. On the original outlay?—And on the maintenance.

Cost of erecting and fitting frozen chambers.

31,977. The original outlay would be very considerable, would it not?—Not so considerable. I have brought a table with me showing about the cost of one system, but I am told that there is a very much cheaper system in use. It appears that the machinery which would chill a cubic space of a million feet (that is of course a very large one) would cost 7,000*l.*; whereas machinery that would cool a cubic space of 16,000 feet would cost about 500*l.* (*See Appendix* .)

31,978. That is the machinery?—Yes.

31,979. But we must have the building first, I suppose?—Yes. If you put your buildings at 1,000*l.* and 500*l.* for your machinery, you get a place then costing you 1,500*l.* The rates that are now paid in these places in London are such as to pay a handsome profit to the owners of the frozen chambers; and in addition to that in London of course the cost of the water which is used is something enormous; it all has to be paid for. But in country districts—take, for instance, the town I mentioned, Blandford—where there is a river, the water would cost nothing; and that would very much reduce the cost of keeping those places frozen.

31,980. You must have pure water, must you not?—No, I do not think it is required very pure. Of course the colder the water, the better.

Chilled milk.

31,981. Do you maintain that supposing, say, from Blandford, chilled milk was sent, the retailer in London would give more for it than he would for milk sent up now in the usual way unchilled?—I know he would, because it would be sour when it got here now. It will not come at all now; we cannot send it at all.

31,982. You could not perhaps from Blandford, but you have got to compete with the regular market?—I have no doubt the retailer would give just as much for the chilled milk as he does for any other. In fact, as I said just now, I know one very large company which I am informed chill their milk now before they send it up.

Tariff for storage in frozen chambers.

31,983. What I want to get your opinion about is this: how is the tariff for the storing of this milk or any other produce to be paid for when you have the carriage still the same afterwards?—It is not so much a question of the carriage as it is the possibility of carrying it at all. At present we are so distant from London by train that we cannot send our milk at all to London, but a chilling process would put us within reach of the London market, when it would pay us or not, according to the rates of freight—that of course is another question. Perhaps I might say that I now for some years have been in the habit of sending game to the Leadenhall Market Cold Storage Company at the end of the season, and I eat it in the course of the summer. Three years ago a stag I shot in Scotland I sent to this chamber. Last summer I gave a dinner party at the House of Commons to some of my friends on a haunch of this venison which was 18 months old, and they all said it was as good venison as they had ever tasted in their lives. The cost of keeping it there is that I pay 2*d.* a stone a month; that amounts to a farthing a pound. Of course they have a great rent to pay—it is in the City, and they have to pay very heavily for their water, but that allows them a handsome profit.

31,984. The storagers might get a handsome profit, but I cannot quite reconcile to myself that the farmer would be able to pay the tariff for these storages, and take the same price for his commodity afterwards?—If you take myself as a farmer, I have a dairy farm among other things. If I sent my milk to London I should send it into this frozen chamber to be chilled, which might take an hour to get through a quantity of it, and I should have to pay something for that chilling process, but not very much. Then I should be in the position if it paid me, if the freights would allow me to send my milk to London, but I cannot do it now.

Frozen chambers for butter and milk.

31,985. May I ask what you do with your milk now?—I make cheese and butter. In the butter business again it would be greatly to the advantage of farmers if they could have their butter put into a chamber for a few hours; it travels so much better.

31,986. In your case it would have to go five or six miles before it got to that chamber?—And my butter does now, of course, before it gets to the station.

Frozen chambers for mutton and vegetables.

31,987. Do you chill your own butter now?—No, I cannot do it; and in the hot weather it makes it very difficult to travel butter properly. I think that in the case of sheep it is of more importance still, because, as you know last season, there was a very bad prospect for keep in the winter, and farmers had to give away practically their lambs which they sell now in the following months, because there is no possibility of keeping them in the winter. If we had had a frozen chamber we could have killed our lambs fairly fat as they were at the end of the summer, and sold them out in the course of the next three or four months at considerable advantage to ourselves. You know, too, mutton made quite a high price in January and February. Vegetables are another thing. I travel on board these great steamers where they have these frozen chambers, and you get your vegetables, cauliflowers and things, as fresh as on the day they were picked.

Government aid for erection of frozen chambers.

31,988. As regards these buildings I think you said something, only you did not clearly define what, that the Government ought to help in putting up these buildings?—My idea is, in the first instance, to see

Mr. H. R. Farquharson, M.P.

20 July 1894.

whether they would be practicable, that the Government should choose one or two centres, and establish something of the sort. If it was found to be useful and profitable I have no doubt that private enterprise would do the rest.

31,989 Or lend the money at a certain per-centage?—Yes, or allow the corporations to do it, because the same power which freezes with very little addition makes electric light, makes ice and all sorts of things of that kind. There are a great many uses it can be put to.

Frozen chambers for meat.

31,990. Is there any other point you wish to remark upon as regards these chambers?—One other point would be—it is apparently a small one—that it puts meat within the reach of the very poorest people, because they are practically their own butchers. Take the case of a farm labourer. Often and often his employer would sell him a sheep for a very little compared with what he would have to pay if he bought the mutton by the pound. But he cannot buy it now, because he knows that he cannot consume a sheep, but if he took a sheep and sent it in there he would have a pound or whatever he liked out from time to time. As regards the cost, the cost of the storage of butter is a great deal less than the storage of meat, because it occupies less space. It comes to about the third of a farthing a month per pound, and anybody who knows the difference between the price of fresh butter and salt butter would know that that third of a farthing would pay a farmer handsomely.

Cost of erecting frozen chambers.

31,991. To make these buildings remunerative they must be built as it were together—there must be a place for meat and a place for dairy produce in the same building?—Yes, you would want a separate place to chill milk, that would be all—a place half the size of this room.

31,992. It would take a considerable building?—I spent some hours in one yesterday in the city; the space is really quite small; there of course space is so very valuable. The cost is based upon what they charge me at this cold storage company, where they have to pay so heavily for their water, and such an enormous rent for the space they use.

31,993. Is that the Cannon Street stores?—It is the Leadenhall Market Cold Storage Company. It is in Leadenhall Market. The office is at 18, Lawrence Pountney Hill.

Tithe-rent charge.

31,994. Have you any other point you wish to bring before us?—Not on that subject.

31,995. I think you would like to say something as regards the tithe question?—I should like to do so.

31,996. What is it you would like to say as regards that?—I wanted to give evidence before the Royal Commission on Tithes, but my evidence was refused by Lord Basing, who was the chairman, because he said that his Commission was only to inquire into the best way of redeeming tithe, and not as to the excessive character of the tithe. I submit that the tithe all over England is very much higher than it was ever intended to be by the Tithe Commutation Act. The object I believe of the Tithe Commutation Act was to give to the tithe owner the same net value after the Act passed as before, and in order to do that they sent round Commissioners to ascertain what the average net value had been of the tithe to the tithe owner for the preceding seven years. That average was to be part of the par value for the future, but as in the future the tithe owner would have to pay rates they also said to him: What has been the average rate in your parish during the past seven years? The average rate at that time was very high on account of the old poor laws.

Inclusion of rates in tithe commutation.

31,997. What period are you alluding to at this moment?—I am speaking of the seven years preceding the Tithe Commutation Act, which I think was 1836. The consequence was that they made enormous additions to the par value of the tithe in order to enable the tithe owner to pay rates in future. Take the instance of a tithe owner who said: "The net value of "my tithe has been 100*l.* on an average for the last "seven years, and the rate in the parish on an "average of the past seven years has been 10*s.* in the "£." The Tithe Commissioners said: "Very well, "your par value in the future is 150*l.*—that is, 100*l.* to "give you your old net value, and 50*l.* with which to "pay those rates." But the moment that the new Tithe Act came into force the new poor law came into force, and the rates which had been 10*s.* in the £ went down in half-a-crown in the £. The consequence was this tithe owner, who ought only to have had 112*l.* 10*s.*—that is, 100*l.* for himself and 12*l.* 10*s.* for rates—got 150*l.*, leaving him 137*l.* 10*s.* for himself and 12*l.* 10*s.* for the rates. It would be so easy if the Government were in the mind to do it to take the Tithe Commissioners' reports, because in nearly every instance they keep them separate. You see in one column the net value of the tithe, and in the next column you see what is added for rates, and those two columns added together make the par value now. What I submit ought to be done is this—you should say: "Very well, "strike off the whole of that column of the amount "added for rates, leave the tithe owner what was "intended to be his real tithe, and let the tithe payer "in the future pay the rates on the tithe whatever "they are, high or low." I could instance a parish in Hampshire, the parish of Tadley; in that parish they actually added 19*s.* in the £ for rates, making the par value at the time nearly double what it ought to have been. I wrote down two or three years ago to ascertain what the rate at that moment was, and, if my memory serves me, it was 1*s.* 3*d.* in the £. There are parishes in Essex and in the eastern counties where the poor law has been badly administered. There you will find now of course the tithe is enormously high on account of these additions for rates.

31,998. You attribute it entirely to this addition for rates?—Yes, I believe that the high tithe in most cases is nearly always caused by the enormous additions made by the Tithe Commissioners for rates. There are the Tithe Commissioners' reports in the library of the House of Commons, it is shown as plainly as possible in them.

31,999. (*Captain Owen Thomas.*) Tithes are much higher in what used to be corn-growing districts, are they not?—As a rule, broadly speaking, in corn-growing districts they are.

32,000. (*Sir Nigel Kingscote.*) You believe this applies universally throughout England?—I know it does, because the Tithe Commissioners' reports made additions for rates, and there are those additions in black and white now in their reports kept separate.

32,001. Taking your own case, where you live would it make much difference there?—Our rates were not very high. I do not think it would make a very great deal of difference. It would make a difference, but my predecessor used to employ the people and so kept the rates low.

32,002. Is there anything else on the tithe question you would like to say?—No, I do not know that there is, excepting that I should like very strongly to insist upon the injustice of letting the present state of things go on as it does. Formerly it was very well to say—you made your bargain in 1836 and you must stick to it, but I contend that this last Tithe Act re-opened the whole question. It re-opened the agreement, and the tithe payers have a perfect right to say: You have no right to consider this matter only in the case of the tithe owner, without considering also the claims of the tithe payer.

32,003. Before the passing of the last Act did you pay your tithe or did your tenants pay the tithe?—I have always paid my own tithe. It made no difference to me personally.

32,004. (*Mr. Elton.*) I suppose when the Tithe Commutation Act was passed there were several other things taken into account besides the rates and the seven years' payments?—Whatever they were are given in an additional column in the Tithe Commissioners' reports.

32,005. There were general matters like the great difficulty of collecting the proper amount of the tithe, the perpetual quarrels, and one thing and the other?—I think that was rather the cause of the Tithe Commutation Act, but I do not think you will find in the Commissioners' reports that they made any allowances for that.

32,006. What I was suggesting was that you said you had put rather strongly what the object of the Act was. I venture to remind you that there was a great object in making peace between the two parties?—I will alter that statement then. I will not say the object of the Act, but the object of the conduct of the Commissioners, or their instructions, or their intentions.

32,007. I think you have got the advantage of us in knowing the dates, the poor law was in 1834, I think?—Did it not come into force in January 1836 for the first time—I think it did.

Mr. H. R. Farquharson, M.P.

July 1894.

32,008. I daresay. What I was leading up to was that the provisions of the poor law were perfectly well known?—Yes.

32,009. Therefore why did they make mistakes about its operations; why did they make such a mistake as to think that the old rates would go on?—It was in just the same way I would submit that when we had our County Council Act passed, the Local Government Act, we were told that probably centralising the business would reduce the rates. Nobody believed it, and they were quite right in this case. But with regard to the old poor law, we were told it was going to reduce the rates; nobody believed it, but they were quite wrong in that case.

32,010. I am only asking your opinion, but that must be qualified to some extent, because no one would believe that that 19*s.* in the £ rate was going on always after the new Act was passed?—The fact remains.

32,011. (*Mr. Little.*) Was not a retrospective view taken of rates as well as value; was not the allowance for rates based upon the seven previous years?—They added 19*s.* in the £ to the rates in that parish of Tadley.

32,012. (*Mr. Elton.*) Then I say that they made what I call a mistake, that is to say, a gross imprudence, knowing what the provisions of the Poor Law Act were going to be?—And not believing what effect they would have.

32,013. Then I further suggested that perhaps we ought also to consider whether this was part of a general policy of give and take, whether it might not be that they favoured the clergy in that respect?—On looking through the Commutation Books I have been unable to find any evidence of the policy of give on the part of the tithe owners.

32,014. It was a question of give to them?—Yes, it was all take with them.

32,015. You see the point of my observation; it is rather a complicated subject, and we have to consider side issues as well; we cannot say actually that they did believe there would be 19*s.* in the £ payable in this unfortunate parish for certain, but they acted as if they did?—No, we know that they did because they put down in one column the amount of tithe or composition that was the net value of the preceding seven years, and then in the next column they put the amount added for rates.

32,016. They behaved very liberally?—They added those two together, and that made the tithe.

32,017. I only wanted to bring out what was actually done. I think you mentioned to one of the Commissioners, but I did not quite catch the answer, whether the tithe is heavier on corn or on grass as a rule?—I think universally on corn land.

Tithe rentcharge on corn and grass land compared.

32,018. I think the richest tithe in England is in a grass parish in Lincolnshire; a rectory of 10,000*l.* a year, which was cut up into three because it was so big?—In Somersetshire, which is a very grass country, I fancy the tithe is very low indeed.

32,019. In most parts of the county it would be of course naturally, but I should doubt it in the very rich pastures down by the Vale. However, your experience is all that we want to know?—My experience of course is very limited as regards tithe personally, but in Essex, which is a county I have looked into a great deal, there are, I think, most shameful instances of additions for rates. The parish of Hadleigh I think is one instance. I cannot remember the parishes now, but I made a list of them at one time where there were enormous additions for rates.

32,020. Could you supply us either with a reference or with a list of that sort, because I think it is very important from the way you have put it?—Certainly I could; I will make out a list of the parishes of that sort. (*See Appendix .*)

Frozen chambers for lamb.

32,021. We should be extremely obliged if you would. Just one or two questions about another of your points. Freezing the lambs in these cold chambers would of course be a very important matter for your county, because there they have very early lambs, have they not?—In one end of it, yes.

32,022. The lambs at Christmas are horned sheep?—Yes, but of course there is never a glut of those very early lambs; the glut consists of the Hampshire sheep.

32,023. Yes, but this is a very precious article with a view to Easter lamb, and so on?—Yes.

32,024. Therefore it would be all the better that none of it should be wasted; you have a particular article which deserves particular protection?—We think so.

Mr. H. R. Farquharson M.P.

20 July 1894.

Disposal of milk.

32,025. You made some interesting remarks about the milk and the cheese; I gather from what you said that what might be called the revolution which has taken place in parts of Somerset has not reached you—that is to say, the winter milk is not made into cheese. Near Frome, for instance, it is all taken by the London tradespeople who want to buy milk; the farmer used to make cheese, now he stops making cheese in the winter months, and he has a constant demand from London. Do you find that in your part?—We cannot get to London with milk. I do not know, but I do not think you can make cheese in the winter at any time.

32,026. They used to make a bad cheese?—A very bad one; it would not ripen.

32,027. They certainly made it, and very bad it was; now they do not make it. If there were these chambers that you spoke of they would find it better in your part as well to send the milk to London, would they not?—Yes, summer and winter of course.

32,028. How far are you from Yeovil or Frome, are you anywhere within easy distance of the main line; how near is the Blandford district to the main line?—We are on the South-Western, which I believe is called a main line.

32,029. Are you on the main line?—No, I am on what they call the Somerset and Dorset Line.

32,030. How far is Blandford from the main line?—Twenty miles.

32,031. Blandford is where you would set up your freezing chambers, is it not?—Yes, and at Dorchester, say.

32,032. There would be 20 miles extra carriage and more before you got to the same zone as Frome?—Yes.

32,033. The prices are very high in London for milk in winter, are they not?—Very high. Of course, as an additional inducement I should say—perhaps it is a broad statement to make—that very little milk is sold in London exactly as it leaves the cow.

32,034. The Somersetshire milk, I am given to understand, coming from a good place and well reputed, fetches as much as 9*d.* a gallon in winter; would that price enable you to get a profit by bringing it from Dorsetshire?—I should think so, most certainly.

Agricultural Holdings Act. Farquharson *v.* Morgan.

32,035. I know of cases where it has gone to 9*d.*, or very near it. Have you any suggestion to make about the working of the Agricultural Holdings Act?—I do not know that I have any suggestions to make. I have been shown some evidence which has been given before this Commission mentioning a case which I had with one of my tenants.

32,036. That case was a little outside the Agricultural Holdings Act in this respect, was it not; it was a case about an award in which other items besides the statutory items were concerned, and, therefore, the county court judge could not deal with that award because it had things outside the Agricultural Holdings Act?—That was one of the points.

32,037. That is a correct point, is it not?—The first point rather was that the award was made so badly that it did not come under the Agricultural Holdings Act.

32,038. I think that answer about the badness or the goodness of the award is rather too local and personal a matter for us to go into?—It was the principal point, I think.

32,039. Our concern is to know whether any statement that has been made here is incorrect. This statement in our Blue Book only goes into public and general matters. As I understand, not only was there a point about the inclusion of other items (on which point we have had evidence from other gentlemen as to the desirability of amending the Act), but also there was another point as to whether the award was correct in other particulars?—The point is that what was owing and brought into that award outside the Agricultural Holdings Act was offered to be paid over and over again, and the other side refused to accept it.

32,040. I am anxious to ascertain whether there is anything that is incorrect in this evidence without going into local and personal things which were—perhaps properly—not mentioned to us; and whether there

Mr. H. R. Farquharson, M.P.

20 July 1894.

was anything that you would wish to correct—Most certainly there is. The whole thing is perfectly incorrect. Here is the question, Q. 9736, "The principal "point of that case is this, is it not: that it was agreed "between the tenant and the landlord in the lease that "items, which are not technically included in the "schedules and provisions of the Agricultural Hold-"ings Act, should be compensated for under the "procedure of the Agricultural Holdings Act, yet the "tenant failed in obtaining compensation for those "improvements, although protected by the lease?"—and the answer is—"He not only failed, but he has "been exposed to litigation for three years, and now "has got an adverse decision in the Court of Appeal." That is incorrect in this way, that that was not by any means the principal point; it was an entirely subsidiary point in the whole case, it was a very minor matter.

32,041. In the next question Lord Cobham asks, "That inclusion made the whole award bad? *A.* It "made the award practically outside the Act and bad." Is that correct?—Yes; only he was not exposed to litigation on that account. He could have had that money over and over again.

32,042. I quite understand; the gentleman who was giving the evidence had not that special knowledge which you necessarily have, and he gave his opinion incorrectly in some respects. The next question, which is the only remaining one on this subject, is Q. 9738, "I think you understand that the decision of "the judges was that the county court judge could not "make an order to enforce the award under the 24th "section of the Agricultural Holdings Act." That I have already practically put to you; but is that correct?—It was invalid.

32,043. Then you see that in the next question the honourable Commissioner says, "I am not entering "into the conduct of the landlord at all." I thought that as there had been statements about that complicated affair it was only right to see whether the answers previously given were wrong in any way?—I am obliged to you.

Inclusion of rates in tithe commutation.

32,044. (*Mr. Everett.*) In regard to the very interesting facts you have given us about tithes, do you happen to know by whom, when tithe was collected in kind, the rates were paid in the first instance?—I know that in some cases they were paid by the tithe owner, and in some by the tithe payer, but I believe they were paid by the tithe owner only when there was a composition of the tithe, or usually when there was a composition of the tithe.

32,045. The rates which were added to make up the final sum of the commutation were, I believe, the actual rates which had been paid on the average of the previous seven years?—That is so.

His own farm.

32,046. (*Capt. Owen Thomas.*) How long have you been engaged in farming?—About 15 years.

32,047. I see that you are farming 800 acres at present, and that that quantity will be doubled at Michaelmas. Is farming very profitable in Dorsetshire?—No, it is not very profitable. I farm 800 acres, and 500 acres of that was the farm that this case was about. I should prefer not to farm it if I could let it at a remunerative price. I do not find farming a very profitable occupation.

32,048. How much an acre is land rented at in your district?—The 500 acres farm I used to have 300*l.* a year for from the tenant this trouble was about.

32,049. (*Mr. Lambert.*) You say you would let it if you could let it at a remunerative price; what was the old rent?—That farm was never let as a farm before this man had it. It was made up of parts of others, which have been made smaller.

32,050. Could you give us an estimate of what the rent was as a whole?—I should think that the rent of that farm at one time would have been 400*l.* or 500*l.* a year.

32,051. Is there any difficulty in getting tenants?—I think there is a difficulty in getting tenants; I know there is a great difficulty in getting substantial tenants.

Rent of farms in his neighbourhood.

32,052. Do you know of any large farms let for about five shillings an acre in your neighbourhood?—No, I cannot say that I do.

32,053. What is the usual rate?—I may say this, that within a very few miles of my house—within nine or 10 miles—I believe there is a large farm let rent free.

32,054. What sort of land is that?—Poor arable land; it is a large arable farm.

Mr. H. R. Farquharson, M.P.

20 July 1894.

32,055. You advocate the establishment of frozen chambers, have you any practical experience as to whether, as you suggest, dairy farm butter need no longer be salted, and that butter can be stored until several tons are ready for despatch; do you think that butter so stored would be equal to the fresh butter?—I have practically no doubt about it, and I give this as my reason. You take the Australian butter that comes over now, 500 tons in a ship at a time; it is as fresh as the day it was put in.

Frozen chambers for butter and milk.

32,056. Of course we rather contend that the Australian butter is not so good as the butter nearer home?—No, it is not so good perhaps in itself, but it is as fresh as on the day when it was put on board the steamer.

32,057. Why is it not so good?—I take it that it is in Australia the same as it is here, where one district differs from another.

32,058. I quite agree; but in the same way if you chill your butter or keep it in a cool chamber, would it be as good as fresh butter?—I believe that butter which has been in a frozen chamber is better because it is firmer. But my contention is that frozen fresh butter or chilled fresh butter would be a great deal better than salted butter, my suggestion being that in the summer time you would make your butter when butter is low, say 10*d.* a pound, and sell it out in the winter at 1*s.* 2*d.* or 1*s.* 1*d.*

32,059. Then you say butter could be chilled, and as chilled milk keeps fresh for treble the period of ordinary milk, do you anticipate that that chilled milk should be sent to the market in chilled cans, or in cans that would keep it chilled?—No. I do not like to mention the name of the establishment I have in my mind, but I know that it supplies London with milk. It is perhaps 100 miles from London, and I know that its milk now is chilled before it comes up because the management found it saved them from all loss in the way of having the milk sent back as bad.

Frozen chambers for beef and mutton.

32,060. You said that cattle and sheep now fattened for Christmas could be kept from the end of the summer; do you think that such beef and mutton as was killed, say, in September would be equal to that killed in December for the Christmas dinner?—I have no hesitation in saying that, as regards mutton—mutton anyhow is as good and I should say better—but as regards beef we know that beef will not stand being frozen, and therefore you can only chill it, and I do not think it would be quite so good. My suggestion is that the coarser sorts of beef, take bull beef and that sort of beef which is now very often kept on at great expense in stalls till Christmas, might very easily be killed by perhaps the end of October when perhaps there is no longer any grass in the pastures, and kept in that way at very great saving.

32,061. Do you anticipate at all what the cost would be of keeping this beef; would it not require very large chambers?—We know that what they charge is a farthing per pound per month, as I have said before. That gives a handsome profit, and it gives a handsome profit in the City of London where the rent for the space is something enormous, and where in addition to that the charge for water is so very high. They use an immense quantity of water in the process.

Establishment of frozen chambers.

32,062. (*Mr. Long.*) With reference to these freezing chambers, how do you propose that they should be paid for—who is to establish them?—I propose that the farmers themselves or whoever stored the produce should pay for the storage of it.

32,063. I mean who is to find the money for erecting them in the first instance?—I suggested that in the first instance the Government should give us an experimental one or two.

32,064. That I know, but this is a totally different thing, I am talking of the establishment of these freezing chambers all over the country?—I think the moment those were found to be profitable you would find that private enterprise would do the rest, especially as from my information you could put a very fair sized one up for 3,000*l.* or 4,000*l.* I do not think there would be a difficulty if it was known to be a profitable thing to get it done in many parts of England. I should like to see corporations given the powers (perhaps they have now) to do it. It would bring business into their

Mr. H. R. Farquharson, M.P.

20 July 1894.

towns, and they might use the same machinery for the electric lighting. It would be a great advantage to the people in the town because they could buy a whole sheep or get a whole sheep and simply store it there, and take it out as they wanted it.

32,065. But as a matter of fact they have them now in many of our large towns, have they not?—Yes, in the North of England, but it is not done with the view of helping the farmers. It is more for commercial purposes in order to keep the frozen meat.

32,066. But it has the same effect if it freezes the meat and keeps it?—Yes, only it is nearly all foreign meat. It is in great towns where foreign meat comes in in great quantities.

32,067. What you desire is that home-grown meat should be frozen in the same way that foreign meat now is?—Yes, I think we ought to have the same advantages as these foreigners have.

Inclusion of rates in tithe commutation.

32,068. With regard to this question of tithe, do I understand you to desire a reconsideration of the whole question of tithe with a view to its re-valuation?—No, because as I understand it the Tithe Commutation Act for one reason was passed to enable landlords to lay money out on their estates without giving a tenth of it to the clergy, and millions have been laid out since the Tithe Commutation Act under that. What I do say is that as they passed a Tithe Act in 1891 in order to carry out what they said was the intention of the Act, that the tithe owner should get his tithe paid direct, so they ought to alter the Act and let him only have the same net value as he was intended to have under the Act, not this gain by those great additions for rates that were made.

Tithe Act of 1891.

32,069. Have many people taken advantage of that section in the Act of 1891?—They find it so very difficult to put it into force. I have just now got a case from Essex which we are trying to put through. As you know, the clause was to this effect: that the tithe is not to exceed two-thirds of the annual value according to Schedule B. of the income tax, but before the tithe payer can get relief he has to produce a certificate from the surveyor of taxes to state what his Schedule B. assessment was. In this particular case the farmer has got the whole of his Schedule A. and Schedule B. assessment swept off. He made nothing, and he has had to pay no Schedule A. and no Schedule B. for the income tax. But when he applied to the surveyor of taxes for a certificate the surveyor of taxes said, "No, "I shall not give you a certificate; the only certificate "we give is where a man has paid his assessment, and "has had it remitted." So that because this man did not pay at first and then have it remitted, he cannot get this certificate, and the consequence is that he will have to pay his tithe unless the Chancellor of the Exchequer will order him to have a certificate given him.

32,070. That largely originates in the process of the Exchequer in insisting upon payment being made and remission granted afterwards instead of allowing a man to avoid payment in the first instance?—I suppose that is so excepting that they did allow this man to avoid payment in the first instance. He did what I do ——

32,071. Yes, but as I understand it they do not issue a certificate except where payment is made and remission granted afterwards?—That is what this man said, and I am disputing that fact. I have written to Sir William Harcourt and he is going to look into it, so he told me yesterday.

Redemption of tithe.

32,072. Have you considered at all the question of the redemption of tithe?—Yes. I have to a certain extent, but the point which I wished to make before the Tithe Commission was that it would be unfair to ask us to redeem the tithe as long as it is calculated upon this additional rate basis, because in many instances it is 40 per cent. and 50 per cent. too much.

32,073. Do you think, putting that point on one side for a moment, that it would be advantageous to the tithe payers if it were made possible to redeem the tithe upon a payment to be spread over a considerable period of years, say, 50 years?—Yes, and even if repayment was not compelled at all, if they were lent money by the Government and paid a low interest.

32,074. For the purposes of redemption?—Yes, of course for that only.

His own farm.

32,075. You told us something about a 500-acre farm just now that you have got in your own hands; is that all one class of land or is it what we call a mixed farm?—It is grass and arable and down. It is an ordinary sheep farm, but rather better land than most of the sheep farms in the neighbourhood.

Mr. H. R. Farquharson M.P.

20 July 1894

32,076. Is the meadow water-meadow?—No, there is no water-meadow in that farm.

Difficulty in letting farms.

32,077. As a general rule do you find that there is a difficulty in letting mixed farms of 300 to 500 acres in Dorsetshire?—So very much depends upon the locality. In my own neighbourhood they are for the most part 500 to 1,000-acre sheep farms where a dairy can be run. A neighbouring farm to my property, a 1,500-acre farm, is one of the best sheep farms in Dorsetshire; it was let about seven years ago for 1,200*l.* a year and now it is let for 700*l.*

32,078. It was let seven years ago?—Yes, or less than that.

32,079. As a rule are the farms which are composed mainly of down and sheep walk falling very much in value in Dorsetshire?—Very much indeed.

32,080. I suppose we may take it that there is a considerable difficulty in letting farms of that character at any rent?—Yes, at this moment I have got a 700-acre farm, it is beautifully laid out in every way with excellent buildings—buildings that must have cost 5,000*l.* at the least—but I cannot let it; no man has offered me 6*d.* for it.

Sale of down land.

32,081. Have you tried or have you contemplated selling any land of that character at all?—No, I have not.

32,082. Have you any idea whether there is any market at all for land in smaller quantities?—I know a farm that was bought in my neighbourhood some 12 or 13 years ago for 14,000*l.*, and I know that that land was sold for something like 4,000*l.* within the last three years. It is land of a very ordinary character.

32,083. Would you be prepared to say whether there is or is not a market for land of the class that we are now talking about—down and sheep farm?—I should say there was no market.

32,084. No market at all?—None at all.

32,085. Would you say it is not a question of price only, but it is an absolute fact that there is no market?—I think I know of farms that I could show you which you could not sell, I think so.

32,086. Does that arise simply from the character of the land, or do you attribute it in any way to the possible liability of a purchaser to buy out the sitting tenant and find the capital for stocking the land himself?—I think that is the difficulty. A man will not buy a farm unless he wants to farm himself, because he knows that he will get no tenant and he will have to farm it in a few years himself, which generally means for a landowner loss.

32,087. To buy out the sitting tenant and to take over the land would in all probability involve an outlay two or three times the amount of the capital value of the land in the first instance?—On poor farms I should think quite twice.

32,088. On these sheep farms?—Yes, I should think so.

32,089. That is a prospect which a man with money does not contemplate with satisfaction?—I think not.

32,090. And therefore he is not tempted to buy?—No.

Advantage of frozen chambers.

32,091. (*Mr. Little.*) I think you advocate these chilling rooms with a view to preventing a glut in the market at certain seasons?—Yes.

32,092. A few thousand sheep too many in London reduces the price very considerably to the producer, does it not?—I have no doubt it does.

32,093. Without much benefit to the consumer?—I should think without any benefit to the consumer.

32,094. Your idea is that at a time of drought, when farmers have to part with their sheep or their cattle at a ruinous price, they might be able to hold their meat over till the prices had equalised themselves?—Yes.

32,095. You think by way of experiment the Government might start some of these freezing chambers, and if they were found to answer you think private enterprise would follow it up?—I think there is no doubt of that.

Tithe Act of 1891.

32,096. With regard to the remission of tithe, and the section that Mr. Long asked you about, I think that the applicant has to obtain a certificate from the

Mr. H. R. Farquharson, M.P.
20 July 1894.

Commissioners of Taxes as to the amount assessed under Schedule B.?—Yes.

32,097. That assessment is not altered when a remission of the taxes is made, is it?—That is the point in dispute. I venture to say that, if a man pays so much, that must be the amount at which he is assessed; otherwise they would make him pay more.

32,098. But is it not the fact that the books are kept in the same state whether a remission is made or not, and that the assessment remains at the same figure?—That I cannot tell you, but if that is so—that is the point in dispute—I say they should keep their books differently. I might mention that the Tithe Act says the remission is to be made according to the annual value of the land for the twelve months preceding the application for the tithe, but if these assessments are made the same, year after year, with no reference to the preceding twelve months, it is impossible for anybody to get a reduction in their tithe.

32,099. Is it not a matter of fact that when land pays no income tax at all it remains on the assessment?—That I am unable to answer you.

32,100. It is a technical term used in the Act, and if the assessment remains the Commissioners are bound by that expression?—I am unable to answer you; I am trying to find out that point; I have no doubt that is right.

32,101. Upon the same subject, do you think that having to apply every year for a remission is a satisfactory arrangement?—No, I do not think it is at all.

32,102. Would it not be a good thing if the tithe owner and the tithe payer were permitted to enter into a binding bargain for a series of years in such cases?—I should think it would be very advisable if they could enter into such a bargain.

32,103. I suppose the tithe owner looks at it in this light: If this farm is not let I get no tithes; if it is let for the present value I get two-thirds of the whole sum; but that is not a sufficient inducement to the landowner to let, and supposing we can agree that for seven years we will divide the rent, the landlord taking one half and the tithe owner one half, such a bargain might help towards letting the land?—Of course it might.

32,104. But it could not be made at the present time by a clerical tithe owner as a valid and lasting bargain, because he can only bargain for his lifetime, or his holding?—Yes.

Inclusion of rates in tithe commutation.

32,105. Then with regard to the addition made to the tithes for rates; those additions were only made in certain cases, were they?—As far as I can see, they were made in all cases where the tithe payer had hitherto paid the rates.

32,106. Where the landowner had paid the rates, then an estimate of the probable amount of rates was based upon the past amount?—That is so.

32,107. Just in the same way as the probable value of the tithe was based upon the past value?—Just so.

32,108. And that in many cases added a very large sum as you have shown?—Yes.

32,109. Those are sums stated in returns made to the House by the Tithe Commissioners from time to time?—Yes.

32,110. Of course there are other cases where the sum allowed for rates has been exceeded?—There may be.

32,111. There probably would be, would there not?—I should doubt it. I cannot say of course, but I should doubt it, and if they were it would be in the neighbourhood of towns where they get perhaps corresponding advantages.

Mr. H. R. Farquharson, M.P.
20 July 1894.

32,112. But it was part of the bargain, was it not, which was made between the tithe owner and the tithe payer?—And for my part as tithe payer I was quite ready to stick to the bargain, but they reopened the question, and altered the bargain in 1891, and I contend that, if they altered it in the interests of the tithe owner, we have a right to have it altered where we can show that we have been injured.

32,113. You base your claim for an alteration entirely upon the legislation of 1891?—I do, and of course upon the injustice of the present state of things.

32,114. (*Mr. Gilmour.*) Do you advocate these freezing chambers for the benefit of the individual farmer in a district?—Yes, and also for the benefit of the consumer in the district.

Advantage of frozen chambers.

32,115. Looking at it from the point of view of benefit to the farmer, that would turn the farmer more or less into a speculator, would it not?—No, because I think you would find speculators and dealers would probably buy the farmers' sheep as they do now, and kill them and put them there, only at a better price.

32,116. Then it would not help an individual farmer or agriculturist?—Yes. Take last year, for instance; there were farmers in our country who had beautiful lambs, which would be worth this year 40*s.* apiece; last year, owing to the turnip crop, and the keep being very short, they had to sell those lambs at something like 26*s.* or 24*s.*—in some cases a great deal less. That was because there were no means of keeping them. The dealers, therefore, would give them a very low price. But if they could have slaughtered them, and put them into these freezing chambers, they would have given the farmers great deal better prices. If it had not been a dealer it would have been a wholesale butcher, or somebody who would have done it; it would not have been only the farmer who would speculate.

32,117. The fact would remain that these dealers or speculators certainly would try to buy at the very lowest possible prices when lambs or anything else were over plenty?—As they do now. But it is not a question so much of the plentifulness of lambs as the scarcity of keep for keeping them in the winter. That is what mostly regulates the price of sheep in our part of the country.

32,118. Still at the same time, as far as I understand you, it comes to be more a matter of the middleman's work than of the individual farmer getting a benefit?—No.

32,119. Except in that difference of price that a man might give with a knowledge that he could preserve that meat for a certain time?—Yes; at present all that the farmer gets is what these middlemen will give, what they must give. There will be a greater demand for lambs when food is scarce than there is now if they know they can put them into these freezing chambers.

32,120. Have you had any experience of farmers in your country speculating in other things that they produce which do not require refrigerating, such as wool and grain, and matters of that kind?—I have known instances of farmers who held their wool when it was 2*s.* a pound, and sold it 7*d.* afterwards; but I do not call that exactly speculating—it is stupidity.

32,121. That rather points to the fact that the farmer does better, taking the run of years, to realise his produce at the market price rather than to speculate?—I believe that is always the case.

The witness withdrew.

Mr. J. S. Forster.

Mr. John S. Forster called and examined.

Mr. J. S. Forster.

His own farm.

32,122. (*Viscount Cobham.*) I believe you farm something over 2,000 acres?—I think it is 1,920 properly.

32,123. Of which 246 are your own property?—Yes. I also farm 1,500 acres for a brother of mine.

32,124. In what part of Northumberland?—I farm over different parts of the country—in north Northumberland mostly.

32,125. Are they mixed farms or sheep farms?—All sorts.

32,126. How much sheep run have you?—Perhaps about half of the 1,920 acres is grass and sheep run.

Appreciation of gold.

32,127. To what do you attribute the long continued depression in agriculture?—To the appreciation of gold.

32,128. In what way has that operated?—As gold has become less plentiful in proportion to the needs which we have of it since 1870, and as everything is measured by gold in this country, it stands to reason

Mr. J. S. Forster.
20 July 1894.

that everything has become cheaper. There is more produced in proportion to the amount of gold that used to be here.

32,129. How do you regard the present glut of gold in the banks?—In this way: Suppose I can see my way to feed 100 sheep which at present prices would pay me 6 per cent. for their keep, but I have not the money to buy them, then I borrow the money from the bank at 5 per cent. At the end of the year I find that prices have fallen 2 per cent.; the result is that instead of getting 100*l.* for the sheep, plus the cost of keep, and 6 per cent. profit, I only get 98*l.* for the sheep plus those things. Thus instead of making a profit of 1 per cent. I make a loss of 1 per cent. instead. Result: next year I do not borrow the money and the 100*l.* remains at the bank. Again, I can make iron, which it would pay me to borrow money at the present prices of iron to make. After making it I find that all my calculations are upset by the falling of prices and that I have been working at a loss. Result: I do not borrow the money and it remains at the bank. Again, a farm is to let which at present prices would pay me to borrow 5,000*l.* to take. I borrow it, and next year the farm is worth 50*l.* a year less than the rent I have given for it. Result: when another farm comes into the market I do not borrow the money to take it and it accumulates at the bank.

32,130. You mean the gold has accumulated in the bank owing to the sense of insecurity throughout the country?—Yes.

32,131. (*Mr. Everett.*) And the unprofitableness of industry?—Yes.

32,132. (*Viscount Cobham.*) Do you attribute the fall of prices wholly to the appreciation of gold?—Almost entirely.

32,133. (*Mr. Giffen.*) What do you mean by the appreciation of gold; because it has been explained here that that is only a name for the fall in prices?—Because it has become more valuable in proportion to the amount of produce.

32,134. That is not a cause; that is the same fact?—The production of gold has not increased—you may put it in that way—in proportion to the increase of the produce, and that causes its appreciation.

Increased production and facilities of transit.

32,135. (*Viscount Cobham.*) You attach but small importance to the increased production throughout the world and the facilities for transit?—Everything is consumed: there is no over-production, only there is no money to pay a good price for it.

32,136. But the facilities for bringing produce here are much greater?—We would have starved here but for those things.

Progressive fall in prices.

32,137. You say in your brief that farmers have been suffering not so much from low prices as from falling ones?—Because we cannot get a basis of operations. No sooner do we take a farm than we find it has become too dear.

32,138. Then do you think that if prices would only become steady, even at their present level, farmers might adapt themselves to the changed conditions?—It is merely a question of rent. So long as the production pays more than the cost of production, minus the rent.

32,139. At present prices there is a good deal of land, we are told, that is unable to produce enough to repay the cost of production?—Not in our county—none whatever.

32,140. And you do not speak for any other part of England?—I can speak for the whole county in that respect.

Rating on improvements.

32,141. Do you consider that improvements such as draining should be rated?—No; I think that is very hard lines. Two men have each a thousand pounds; one puts his thousand pounds into the funds and he is not rated on it; the other improves the country, and he is a benefactor to the country because he makes two blades of grass grow where only one grew before, yet he is at once rated on his expenditure; that is very unjust.

32,142. How would you correct that anomaly?—That is a difficulty I cannot solve; but it is certainly an injustice.

32,143. Are tenants rated in a similar manner and with equal injustice upon their outlay?—They are very often rated unjustly in this way: they have had notice, for instance, to make a new burial ground, or to bring water to a village, or to sewer a village. Of course you cannot do that out of the rates directly, so you borrow the money from the Government, to be paid off in so many years. The ratepayers have got to pay that money, both capital and interest, in so many years. That comes hard on them, I consider, because it is a permanent improvement for the landlord after so many years.

Mr. J. S. Forster.
20 July 1894.

32,144. Should you say the tenant should pay any part of it?—Yes; they get some benefit. I think they should pay part of it.

Division of rates between landlord and tenant.

32,145. Do you think that grievance would be mitigated to some extent by the rates being divided between the landowner and the tenant?—I think that would be more just.

32,146. Do you think that would fairly well meet that difficulty?—Yes, I think that would meet that difficulty.

Railway rates on agricultural produce.

32,147. Have you an opinion as to the rates charged by railway companies for agricultural produce?—That comes to be a question of through rates which I do not understand very much about.

32,148. You regard it entirely from the point of view of an agriculturist, and I suppose you have not considered it from the railway company's side?—I do not think we can alter them very much.

Cost of production.

32,149. What has been your experience as to the cost of production on your farm since 1875?—The cost of production, I think, has decreased 12 per cent., but I can give you the figures for the whole calculations if you wish. I gave them to Mr. Wilson Fox some time ago and they appear in his return.

32,150. You say generally that you have found that the cost of production has decreased?—I think there is 10 per cent. off labour bills, 25 per cent. off manure, and 20 per cent. off foods.

Cost and quality of labour.

32,151. We have had witnesses from Northumberland who have given rather contrary evidence on that point; they have stated that the cost of production has not decreased and that the cost of labour has increased; I think you are against them on both those points?—They are probably thinking about recent years. The price of labour has had a slight tendency to rise, but from 1874 and 1875, which I take to be the basis, it has decreased 10 per cent. on arable farms. Hill farms are not much affected because they pay most in kind.

32,152. When was the increase chiefly?—The original increase took place about 1870. Wages got up to the highest point about 1875.

32,153. Would you say that since 1875 labour is cheaper by about 10 per cent.?—Yes, it is now.

32,154. And the quality is still as good as before?—Quite as good; it is very good indeed.

32,155. Does that apply to both men and women?—Most excellent labour; you cannot desire better.

32,156. Do you get as much women's labour as you did?—I think so.

32,157. We hear something about the deterioration of the diet of the Northumberland labourer affecting his physique; do you agree with that?—I cannot notice it much myself, although I can notice it in the middle classes more than in the hinds.

Local rates.

32,158. Have your rates increased since the last 20 years?—Not to any appreciable extent, but of course it takes more produce to pay them; one third more.

Fall in rents.

32,159. How much has the fall in rents been recently?—I should think, taking all round the county, approaching from 25 to 30 per cent.; 25 per cent probably. I can give you it for my own farms if you wish.

32,160. Generally would you say it is about 25 per cent.?—Yes.

32,161. But in your own case is it different?—In my own case it has been 40 per cent.

32,162. Has that taken place since 1879 or in more recent years?—It has taken place since 1879.

32,163. Beginning then?—Yes, about then.

32,164. Were farmers making money in Northumberland before that period?—They were making money before 1875 or 1876, but after that they made very little. In one large farm I have I looked up the books the other day, and I find that I have made for the last 13 years 2*l.* 6*s.* 8*d.* per cent. on my capital.

Mr. J. S. Forster
20 July 1894.

32,165. Do you think the fall in rents in Northumberland has generally been sufficient to meet the situation?—No, it would take on an arable mixed farm 60 per cent. to meet the difficulty.

Agricultural Holdings Act.

32,166. What have you to say as to the working of the Agricultural Holdings Act?—It is too uncertain in its results. So much depends on the man who is appointed as thirds-man, and the decisions are very contradictory. At present it is too uncertain. There is a great difficulty in appointing this thirds-man. You see, nearly always a land agent is appointed because the landlord will never agree to a mutual appointment; he always, or nearly always, either refers it or threatens to refer it to the Board of Agriculture, who appoint this thirds-man. Now they have got mostly, I believe, lists of men who are land agents, and whose living depends on the landlords. We know many of them to be very much opposed to the Agricultural Holdings Act, and we are so afraid of getting hold of a man of that description that we have to agree always to take the most unobjectionable man of these others rather than to apply to the Board of Agriculture and run the risk of getting one of these very low valuers appointed.

Appointment of official valuers.

32,167. Have you many competent land valuers who are not land agents?—We have no what you call land valuers in our country.

32,168. How do you mean; are they all land agents?—They are all land agents. It is a class of people in the south of England which does not exist in the north.

32,169. How would you remedy this grievance; what can the Board of Agriculture do?—I believe the best plan would be for a person to be appointed to act in all cases through the county, an impartial person. In that case farmers would know when they were investing their money in improvements what they had to expect, and would act accordingly. If they saw they were not going to get paid for improvements that they were entitled to, they would not improve the land.

32,170. By whom would he be appointed?—By the county council.

32,171. Would he be one officer who would devote the whole of his time to it?—No, it would not take all his time; it would take very little of it.

32,172. It would take very little of his time for the large county of Northumberland?—Very little; if it once became established, and the people knew what they were likely to get, there would be very little come before him. It is the uncertainty that causes the mischief.

Compensation for unexhausted improvements.

32,173. Have you any complaint to make as to the mode of awarding compensation?—Yes. After the Act came into force people began to make tables of exhaustion. These tables only apply to the last few years, whereas a good farmer puts his farm into condition at first. On a farm I once took I spent 2,000*l.* in the first eight years, and I got 401*l.* for compensation because I had not to spend money afterwards. My land was in condition and remained in condition without much expenditure.

32,174. How would you improve the Act in this respect?—I do not know how I would improve the Act. It is the working of the Act that is most involved; it is the way that the Act has been worked which is worse than the Act itself in that respect.

32,175. Still I suppose you would recommend some specific provisions in the Act to compel a different mode of awarding compensation?—I think the schedules in the Act had partly to do with it. They assume you should be paid for manure and that sort of thing, and so people said, "Manure only lasts so many "years and we can only go so many years back."

32,176. Would you keep the schedules?—Some of them might be altered, but I would not speak exactly to that just now.

Compensation for increased fertility.

32,177. Are you in favour of awarding compensation to an outgoing tenant in respect of the general improved fertility of his farm?—Yes.

32,178. How would you find the means of comparison between the time of his outgoing and his incoming?—That is another very difficult question. In my own case I proved that it was producing one-third more than it produced at first.

32,179. How did you prove it?—We all have what we call waygoing crops in our county; that is to say, you quit on the 12th May; you sow your crop before then, and your successor takes it at a valuation. I proved that the crops that I sold were one-third larger than the crops I bought.

Mr. J. S. Forster.
20 July 1894.

32,180. That does not necessarily show that the fertility of the farm is one-third improved?—In this case it improved more than one-third because it was a better corn year the year I entered than the year I left.

32,181. Would it be possible to compare the condition of a farm at the beginning and the end of a tenancy without the farm being inspected at both periods?—It would be very difficult to do; that would be very difficult to work.

32,182. Are you in favour of the inspection when the tenant comes in?—I do not know how that would work; I know some people are in favour of it.

32,183. But you see objections?—We would have no faith in a man making a proper inspection in the first place.

32,184. Would you consider that the tenants do not receive full justice under the present mode of awarding compensation?—I do not think they do.

32,185. Do you think that any get more than they ought to get under it?—I have never known any.

Compensation for laying down permanent pasture.

32,186-7. Do you consider that in regard to laying down to permanent pasture the Act is not sufficiently explicit?—It is not sufficiently explicit because the man who goes to the real expense is the man who lets it lie. It may not have cost the original man 10*s.* an acre to sow the seeds.

32,188. The man who lets it lie is generally the man who sows the seeds?—The difficulty is to know who is to get the payment for it.

32,189. You mean that one tenant sows the seeds and another tenant takes on the farm and has to allow the land to lie idle to some extent?—That is the difficulty.

32,190. When he takes the farm does he not take it at a reduced rent in consideration of these fields being not fully available?—He takes it at its market value then.

32,191. At its then market value?—Yes; but then you see it is a considerable loss to him to let it remain, and it is a considerable benefit to the landlord to get old grass at the end of the lease.

32,192. Would that not be considered at the fixing of the rent?—I do not think it would much.

32,193. Is that because there is much competition for farms in Northumberland?—Yes; farms are not vacant in Northumberland; there are none that are, unless it is very exceptional.

32,194. Farmers in their eagerness to get farms do not sufficiently consider their own interest, is that it?—It has been the case, I am sorry to say.

32,195. Do you think they should be protected by legislation?—No, I do not believe in grandmotherly legislation.

Law of distress.

32,196. Are you against the continuance of the law of distraint?—Certainly.

32,197. I think that the reasons you have for that are mostly those that have been very fully put before us, and I need hardly go over the ground again. You think that the effect of abolishing the law of distraint would be that tenants in possession of more capital would be able to get into farms?—Yes.

32,198. Would not the result of that be that in many parts of England farms would be left vacant?—It would not be the case in my county, and I can only speak for it.

32,199. Is there a strong feeling against the law in Northumberland?—Yes, there is amongst the thinking members of the community.

Marking of foreign meat.

32,200. Do you think that any steps should be taken by Parliament to provide against the sale of foreign meat as British meat?—Yes, I think it is very unjust to the producer that this meat should be sold as British meat.

32,201. What steps should you recommend?—I should recommend that butchers should take out licenses, and that they should notify the fact above their shops, and on their carts, and all the appliances they have. That is one thing that should be done; next, the foreign meat should be marked as such.

32,202. How would you mark the small joints?—I understand they do succeed in doing it in Belgium.

Mr. J. S. Forster.

20 July 1894.

32,203. You think that if possible, at all events, foreign meat should be marked?—Certainly.

32,204. If not, you think that compelling butchers to notify the fact of their selling foreign meat above their shops and on their carts would to some extent be a remedy?—I think that would go a very great deal towards effecting the result.

Branding of foreign cattle.

32,205. Should store cattle from abroad be branded?—Yes, they should be branded and considered as foreign cattle for at least two months after they come here. I do not see any other way of preventing swindling than that.

32,206. Has the Ground Game Act worked beneficially in Northumberland?—Yes.

Ground Game Act.

32,207. Have you any recommendations to make with regard to it?—No, we have never suffered much from game in our country.

Co-operation in Northumberland.

32,208. Is co-operation largely practised in Northumberland?—It is practised to a considerable extent for buying foods and manures, and that sort of thing, but not in selling.

32,209. Do you think that distributive co-operation would produce good results?—I do not think we could improve the present systems.

Restrictions on cultivation.

32,210. Are you under any restrictions upon your cultivation?—Yes, on one farm I am. I must not take two white crops running, and if I sell hay and straw I must apply manure to the land in addition to the ordinary manure that I would apply.

32,211. Do you find the restrictions fetter you in your system of farming to any considerable extent?—Not to any considerable extent, because I am sure I could get leave to do what I wanted to do, if I wanted to do anything.

32,212. Do you think they are reasonable in themselves?—No, they are very often unreasonable; but you see landlords are bound to protect themselves, and every case is different. You can injure light land much more easily than you can injure strong land by many breaches of covenants. Therefore it is so difficult to say what is the proper penalty. I was going to suggest that this same man that was to act as thirds-man in arbitrations for compensation might be appointed also to decide what damage would be done by this alteration in the cropping, or anything of that kind, and to assess that damage.

Appointment of valuers.

32,213–4. (*Mr. Chaplin.*) You said that once an arbitrator was appointed he would have very little to do; are not valuers employed on all changes of farms in Northumberland?—No, we have not that class of valuers; what you call valuers in the south do not exist in our country.

32,215. There is nothing of that sort on a change of farm then with you?—No.

32,216. How is the valuation settled?—I appoint a friend, and another person appoints a friend; that is the ordinary way.

32,217. Then they are friends who do the duty of valuers?—Yes, but there is not much valuation really. There is not much old tenant right in our county that is involved in the valuing; and there is no valuing scarcely, except how much is the depreciation of hedges or something of that kind.

32,218. There is very little, you say, of what we should call tenant right in some other counties?—It scarcely existed in our county before the Act.

Compensation for increased fertility.

32,219. You told us that on one occasion you had spent 2,000*l.* quite early in your tenancy?—Yes.

32,220. And then only got 400*l.* as compensation when you left?—Yes.

32,221. How many years had you had the enjoyment of that increased expenditure?—I had it for eight years. I had a 16 years' lease.

32,222. Then for eight years you had gone without spending much on it; is that what you mean?—I spent just enough to keep it up to its full style of fertility. The land was growing as much as it could grow, and if I had used more manure the crops would have gone down.

32,223. You practically, I suppose, got a good deal of compensation out of the increased fertility of the land while you had it?—If prices had continued as they were it would have paid me. As it was I lost this 2,000*l.*, all but the 400*l.*

32,224. That was owing to the fall in prices?—Yes.

Mr. J. S. Forster.

20 July 1894.

32,225. At steady prices you say you would still be able to continue farming to advantage in Northumberland, and what you chiefly complain of is what you call, I think, a progressive fall in prices?—Yes, that is what does it.

Progressive fall in prices due to appreciation of gold.

32,226. That is your great difficulty?—That is our great difficulty.

32,227. That you attribute to the steady appreciation of gold?—Yes.

32,228. The remedy which I observe, according to your brief, you propose is to encourage the production of gold as much as possible?—Yes.

32,229. How do you propose to do that?—It is very difficult to do it. The only case we have is Wales, where a man a few years ago proposed to extract gold, and where I believe it can be at present mined to advantage if you take away the Government royalty. That was what stopped it as far as I remember.

32,230. I think that was so, as far as I remember; but where else do you propose to apply that?—It is very difficult to tell.

32,231. What you mean, rather, is that an increased production of gold would in your opinion be a remedy to a certain extent for the fall in prices; is that not it?—It would be a total remedy.

32,232. But you have no actual plan to propose for encouraging the production of gold?—No.

Production and consumption.

32,233. (*Mr. Whitehead.*) I think you said that you considered that everything produced was consumed?—Yes.

32,234. Would that apply to wheat?—Yes; that is not consumed by men only, but by animals as well: it is all consumed.

32,235. There is no waste: everything that is produced is consumed?—Yes.

32,236. Everything that is produced by the farmer?—Yes.

32,237. It is not the great amount of produce, or rather over-production, that causes low prices, but the appreciation of gold, I think you say?—Yes.

Effect of demand and supply on prices.

32,238. Do you not think that the question of demand and supply has something to do with prices?—The question of demand and supply has often a temporary effect on prices, but they always right themselves, and I have no doubt they would have righted themselves during the last 24 years.

32,239. Do you consider they will right themselves in the future?—Yes.

32,240. Independently of any increase of production from land that may be newly cultivated, as, for instance, in Africa?—What I mean is this, that the price of gold will equalise itself to the price of produce by-and-by, so that we shall have ultimately no further fall in prices.

Effect of appreciation of gold on prices.

32,241. Then it is not at all a question of supply and demand, but simply a question of the appreciation of gold that affects prices?—At present, and so far, yes.

Effect of increased imports on prices.

32,242. And all these enormous importations of corn from America and Australia, the Argentine Republic, India, and other countries, have really very little to do with the low prices which have been experienced lately by agriculturists?—They may have had a little effect, but not the principal effect. We could not have done without them.

32,243. You could not define exactly the proportion of the effect, I presume?—I could not define that.

32,244. Do you consider that everything will be consumed, no matter how much is produced?—I cannot speak for the future, but I can speak of the past.

Condition of farmers in Northumberland.

32,245. I think you said that there are no farms to let in your district?—There are practically none.

32,246. Are farmers doing fairly well?—No, they are not; they are doing fairly badly.

32,247. We heard yesterday from another part of Northumberland that farmers were doing fairly well, comparatively speaking?—They are doing much better than they were a few years ago, because rents have been reduced.

32,248. That statement would not apply to your part of Northumberland?—No. They are making a very small interest on their capital.

Mr. J. S. Forster.

20 July 1894.

32,249. Your part is the northern part of Northumberland, is it not?—Yes, but I know about it all.

Effect on prices of the appreciation of gold and increased facilities of transport and communication.

32,250. (*Mr. Giffen.*) Am I to understand from what you say in your brief that the fall of prices is not caused mainly by increased production and facilities of transit, but much more by the appreciation of gold; in other words, that prices would have been as low as they are now, supposing the improvement in the facilities of transit which was in progress 20 years ago had come to an end at that time?—That is to say, supposing the productions of food in this county had decreased, do you mean?

32,251. No. Suppose, instead of the lowering of freights and the opening out of new countries, and the improvement in the facilities of communication generally, going on from 1873, that it had come to an end in 1873, and things had stood still at that point, would prices have been as low as they are now?—No, they would not.

32,252. Prices would not have been so low as they are now?—They would not have been so low.

32,253. So that the present state of prices arises in your opinion from the improvement in the facilities of communication and causes of that kind, as well as from other causes?—That has had a slight effect; the facilities of communication and extra production in other parts of the world have all an effect no doubt.

32,254. Is it not the case rather that the two things co-operate? Do not the improvement in the facilities of communication on the one side, and the contraction of the precious metals on the other side, co-operate towards the same result?—Yes.

32,255. That is to say, a fall of prices?—Yes.

32,256. And you have no means of distinguishing how much is to be attributed to the one cause, and how much to the other?—No, you have no means of distinguishing.

32,257. And there are no means of distinguishing?—You can prove that the production of gold has been decreasing, and that the production of other produce has been increasing. You can then distinguish that there has been a large amount due to the non-production of gold.

32,258. Would it not be the proper way to put it that by comparison with some previous period, when the production of gold was rather increasing, and when prices remained stationary in spite of a continuous improvement in facilities of communication—that by comparison with such a period you ascribe the variation in prices now to what has happened in gold rather than to the other side?—I think that the gold is the chief factor in the business.

32,259. But that is by comparison with some previous state of things?—Yes; when we were getting more gold, we found prices going up.

32,260. In order to make a comparison which will be of any value at all, you have got to make a comparison with some previous state of things of some kind, and to describe what the previous state of things was?—Yes. By that last answer I mean we can take a period of years prior to the fall of prices, when we know that gold was being found in increasing quantities; and we can compare it with what has happened since 1870, when we know that gold has been found in decreasing quantities.

32,261. There is a difference between the two periods in that respect?—There is a difference.

32,262. You would not have had the same difference between the two periods, if you compared them with respect to the continous improvement in invention and in facilities of communication—that is a constant cause which has been going on for very many years?—Yes, and I think consumption has been keeping pace with that.

32,263. That is the sense in which you speak of the production of gold being the cause of the fall of prices; and you do not mean to imply that the improvement in the facilities of communication, and the opening out of new countries have had nothing to do with it?—If these had not gone on as you say, we should have had things dearer than they are at present; that is all.

32,264. (*Mr. Clay.*) Regarding north Northumberland you complain about the valuations being very unequal when they come to assess the compensation for improvements?—They are very unequal; we do not know where we are in claiming compensation.

32,265. Have there been no arbitrations to fix the rent between the landlord and the tenant; is it never left to arbitration to fix the rent?—Never.

32,266. Then are the rents fixed between the landlords and the tenants themselves?—Yes.

32,267. I suppose the kind of land has a good deal to do with it?—Entirely.

Appointment of official valuers under Agricultural Holdings Act.

32,268. What would you propose to put in place of the existing machinery, in order to bring people together and to compensate them for the increased fertility of the soil or for their improvements?—The man I propose should be appointed by the county council, and it would be his duty to act in all cases arising in the county.

32,269. How many men would you have named in Northumberland for doing such a big county?—You could get several who would do it quite well. It is not nice to mention names, but you could do it very well yourself.

32,270. I am not referring to the individuals—I am referring to the number of official referees that you would propose to appoint in Northumberland?—There are three or four that I know of, but I will not mention names—and there are some we are very much afraid of getting.

32,271. I do not want you to mention names. How many people would be required in the different districts in the county?—One man would do the whole of the county of Northumberland quite easily.

32,272. Would you not require to have men in the different districts dealing with questions arising in their own locality?—We could not pay a man very highly for each case, besides that would involve the appointment of several men and very likely you would not be able to get a sufficient number of good men. I think if you had one good man appointed he would very soon make himself acquainted thoroughly with all the parts of the county and their variations.

Remuneration of valuers.

32,273. I suppose the remuneration of these men would be based upon the number of days they were employed?—I suppose so, but I have not thought that matter out.

Compensation for improvements and increased fertility.

32,274. According to your evidence, what you go in for greatly is that you would like to see compensation given not only for the last two or three years, but for the general improvement of the farm and for the increased fertility of the soil?—Yes. I think that is about the first sentence in the Agricultural Holdings Act, and that is what I want carried out.

32,275. So that it comes to this, that if there were a good sound basis on which to assess to remaining value, capital would more freely be brought into the land?—Certainly it would.

32,276. But just now people are rather afraid even to approach the Agricultural Holdings Act for fear of the expensive law process which has to be gone through?—Yes, it costs you very often as a rule for expenses about half what you get.

Compensation for laying land down to grass.

32,277. You would like to see a person compensated fully for laying down old grass and leaving it?—Yes.

Law of distress.

32,278. I think you said the law of distraint has rather been an interference with the prosperity of the tenant in Northumberland?—Yes; it is an unjust law and should be abolished.

Compensation for home-grown corn consumed.

32,279. (*Mr. Gilmour.*) Have you considered another matter that has been talked about a good deal, namely, the manner in which you could get compensation for home-grown and home-consumed produce?—I have considered it a great deal, but I cannot arrive at any satisfactory conclusion upon the question, because it opens the door to fraud. We must be just to the landlord as well as to the tenant.

32,280. You do not think, then, as a practical man, that it could be fairly and honestly worked out; is that your view?—It could be, but then it would not be, I am afraid, sometimes.

32,281. It would not be sometimes, you say?—Yes.

New systems of farming.

32,282. Are there any new lines that you could recommend to the tenant farmers in your neighbourhood that they might strike out in the present state of matters which might help to improve their position?—Yes.

32,283. I mean any new lines which could be practically put to good trial in your part of the country?—Do you mean general questions like foreign meat?

Mr. J. S. Forster. 20 July 1894.

32,284. I mean any new lines which could be adopted in your part of the country?—No. A question was asked me about loans; that might be good enough for landlords, but it would ruin the tenants. It is a bad plan to lend a tenant anything as it hangs a weight around his neck that he never recovers from.

32,285. What I meant was, is there any new line that the tenant farmer could profitably take in your district, such as the production of certain other articles which he does not produce now, or farming in a different way than he does at present, which you could suggest and which would help his position monetarily?—That involves the question of small cultivation and of restrictions. Wages are much too high in our country for this petty culture; many people have tried it, but, except in the immediate neighbourhood of Newcastle, and one or two places like that, they cannot make it pay. All the greengrocers of Newcastle go down, as they say, to the boat for produce; it comes across from Holland so quickly and they get it so much more cheaply than it can be grown at home.

32,286. Then your opinion is that they must stick to the same line of agriculture that they are at present following?—Yes. I have had an open lease for very many years, but I find it pays me to go on the old system; that is as good as any I can find.

Breeding of horses.

32,287. Is yours a horse-breeding district?—Yes, we breed a certain number of horses.

32,288. Are they half-bred horses?—All kinds. Our country is celebrated for breeding hunters.

32,289. Has the encouragement given by the Queen's premium stallions been of service?—Not much, I am afraid.

32,290. Not much?—I do not think so myself; I very often find better ones.

32,291. You breed high-class hunters, do you?—We try.

32,292. Can you get a sale for them?—They are very difficult to sell now; formerly they sold much better, but with the bad times somehow or other there is not the same market for hunters that we formerly had.

Purchase of remounts by Government.

32,293. If the Government obtained horses at a younger age for remounts would that help the men who breed half-bred horses?—You must regard Government horses as misfits; they were meant for something else when they were bred, and for something better.

32,294. If they were sold a bit younger that would not be the case, would it?—I calculate that we must have 100*l.* for every four year old that we breed, otherwise we breed at a loss.

32,295. 100*l.*?—Yes; we do them well, you know, and it is no use doing them badly.

32,296. If you gave the Government your raw material at a much younger age you would not require to spend 100*l.* on that colt surely?—They are expensive animals to keep, and if you leave anything undone you get an animal worth only 20*l.* or 30*l.*

Appointment of official valuers under Agricultural Holdings Act.

32,297. (*Mr. Little.*) I understand you to say that the Agricultural Holdings Act fails chiefly from want of confidence in the umpire?—That is so.

32,298. That the Board of Agriculture generally appoint land agents?—Yes, nearly always.

32,299. And that the tenants are afraid of their action?—They are afraid of the action of all in general and of some in particular.

32,300. Do you think that a valuer appointed by the county council would be a more impartial person than an umpire appointed by the Board of Agriculture?—I think he would be. There would be at any rate this great advantage, that his decisions would be consistent, and we should know what we had to expect from him. At present we do not know what we are going to get.

32,301. I thought it was the bias of the land agent that you complained of?—If I knew that I should have to have some of the land agents who might be appointed, I would not trouble myself about the matter, for I would take care not to improve.

32,302. You would know what to expect?—I should know what to expect, and, therefore, I would take care not to improve.

32,303. I thought you said that what you desired was that you should know what to expect. I think you said that one umpire could do the whole work in Northumberland?—Easily. If it was once established how much the people were going to get for certain improvements, in nine cases out of ten there would be no arbitration at all, because the landlord and the tenant would be able to come to an agreement quite easily, and there would be no need to refer.

Mr. J. S. Forster. 20 July 1894.

32,304. Could one gentleman deal with all the cases that would arise in Northumberland in the year within a reasonable time?—There are not half-a-dozen cases in the year.

32,305. But there must be a great many cases of farms being given up?—Yes, but most of the tenants are so afraid of the expense involved in the business that they dare not go in for arbitration.

32,306. Is there not always a valuation when a farm is given up?—Never.

32,307. Not on certain matters?—Not on compensation matters.

32,308. What about your waygoing crop?—Yes, there.

32,309. You have to have a valuation of the farm crops and such things?—Yes.

32,310. Then would you have an entirely different set of valuers for claims under the Agricultural Holdings Act?—Yes, quite a different set.

32,311. Would it matter whether a man saw a farm within three months or six months of the time when the farm was vacated?—Of course it would be all the better if he saw it at the time.

32,312. Is it not essential for many things to see the farm at or about the time when it is given up?—Yes.

32,313. Many questions in dispute can only be fairly settled at the time when the change of tenancy is made?—That would be so.

32,314. Then would there not be a practical difficulty in one man going over the whole county within a few weeks of your quitting period?—He could do it all in a week.

32,315. That is your opinion?—Yes.

Necessity for improvement.

32,316. (*Mr. Long.*) You have laid a good deal of stress upon this necessity for improving the Agricultural Holdings Act; do you consider that some portion of the agricultural distress has been due to a want of enterprise on the part of the farmers arising from want of confidence?—Not much in our county, and I am only speaking for our own county.

32,317. Would you indicate a way in which the Agricultural Holdings Act might be made a measure for the relief of agricultural distress?—If it were made more simple, of course, there would be encouragement given to expend money towards the end of the lease in order to keep the land in condition.

32,318. I understand you to be speaking of your own neighbourhood?—Yes. I think that question should have been differently answered: I think there has been loss sustained in that way by the want of that confidence.

32,319. There has been loss?—Yes.

32,320. But has the loss been sufficient to deter men who have got the capital from spending it upon their farms?—Yes, in some cases.

32,321. Do you think there would have been an increased production per acre if there had been more confidence?—There would.

32,322. After all would it not have a very limited application—it would only apply to the tenant quitting?—It would apply very much to the tenant entering, if he saw that he was likely to be compensated for the money spent.

32,323. A tenant entering and a tenant quitting is, we hope, a simultaneous proceeding; but I mean it would only occur in the case of a tenant quitting and another tenant entering—either a new tenant or the landowner?—The benefit that the tenant would derive, and that the land would derive, would be at the beginning of a lease, not at the end of it.

32,324. Yes; but the compensation would only come up for settlement when there was either the termination of a lease or the creation of a new tenancy?—Yes.

32,325. Therefore it would only apply in a limited number of cases?—The compensation would only apply?

Mr. J. S. Forster.
20 July 1894.
Appointment of valuers.

32,326. The improvement in the Act which you suggest, I mean. You said, in answer to Mr. Clay and to Mr. Little, that one valuer could do the whole work in your county in a week?—Yes.

32,327. Clearly there would not be a very large number of cases to come before him?—A number of cases is just what I want to avoid. If we had this one valuer, whose decisions we could depend on, and whose awards we would know beforehand, we should not require to employ him at all as the matter would be arranged between the landlord and the tenant.

32,328. It would be settled between the landlord and the tenant?—Yes.

32,329. And there would be no difference of opinion?—No, because each would know what they could get.

32,330. Because you would get a uniformity of practice which would be well understood?—That is what I want to be at.

32,331. You would avoid, therefore, any difference between the two parties?—Very often you would avoid any difference.

32,332. You therefore really attach more importance to the indirect effect of such an alteration than to the direct effect?—The direct effect would give farmers more confidence all round in improving their land; or if they found this man's awards were very low, they would not improve it, and they would not lose money in that way. It might have a disastrous effect if he were a man who gave very low compensation.

32,333. Of course it might cut both ways?—Yes.

Breeding of hunters.

32,334. With reference to the questions asked you by Mr. Gilmour about horse-breeding, do you think that farmers have found breeding hunters to be on the whole a remunerative proceeding?—No. My father bred them very extensively; more so than anyone else in the county, and prices were very much higher then for hunters than they are now. I have sometimes taken the trouble to calculate the produce of the mares he had, and I never knew one whose produce paid for breeding. The breeding of horses has been a ruinous business.

32,335. When you said just now that it would not pay to take less than 100*l.* for a four year old, you intended, did you not, that the 100*l.* should cover the loss you would sustain by the colts and foals which went wrong, by that produce which went amiss?—No, the 100*l.* got for those sold will not cover the loss sustained by those that go amiss.

32,336. Would you estimate that you are able to sell for a good amount more than one out of three?—No; you cannot sell one out of three now for 100*l.*

32,337. Do you think anything could be done to assist farmers by establishing some sort of agency for the direct sale of horses bred by farmers?—I doubt it very much. Customers as a rule are not judges of horses, and they prefer to pay 50*l.* extra to a dealer for the sake of his judgment.

32,338. Then of course they get the advantage of another horse being chopped with them, if that does not suit, at a little extra money?—Yes. Very few people have sufficient confidence to go straight to the breeder and buy a horse of him.

32,339. If there was some sort of agency established in different parts of the country might that not possibly facilitate the transfer of horses directly from the breeder to the purchaser?—It might help a little.

32,340. It might help?—Yes.

32,341. Something, for instance, under the auspices of the Royal Commission on Horse Breeding?—It might help it a little.

32,342. I think you said that the Queen's premium sires had not been of much value in your part of the world?—No. We have had some middling ones.

32,343. You mean they have not been good enough?—They have not been good enough.

32,344. As a matter of fact there is very little difficulty in getting a sound stallion if you choose to take the trouble to get him, is there?—We can get them nearly sound very often, and we would rather use them if they are better bred and better looking ones, than we would have a horse which has had so many examinations to pass and whose only merit is that he has been able to pass an examination.

32,345. (*Mr. Lambert.*) Do you get a good competition for farms in your neighbourhood?—Yes.

Mr. J. S. Forster.
20 July 1894.
Competition for farms.

32,346. What would be the most lettable sized farms?—The most lettable sized farms are rather the smaller ones at present—farms between 200 and 300 acres.

32,347. What would be about the rental?—It would vary exceedingly. Fairly good arable land in our country is worth from 20*s.* to 25*s.* per acre.

32,348. What proportion of pasture would there be to the arable?—About a fourth or a fifth.

32,349. How many tenants would you probably get competing for a farm of 300 acres at the rental you mention?—There has been rather a rush for farms this year; why I cannot tell. In previous years perhaps you might get two or three or four.

Reduction of rents.

32,350. What reductions of rent have taken place in your district?—I believe the average reductions have been between 20 and 30 per cent.

32,351. So land was rented very considerably more per acre 20 years ago than it is now?—Yes.

32,352. But you say that it would take a 60 per cent. reduction of rent to meet the present prices?—Yes, and I can show you figures to prove it.

32,353. Why have not the farmers got that 60 per cent. reduction?—They have done their best. We can only do our best in this world, and they have done their best.

32,354. To get it?—To get as much as they can.

32,355. They have not been able to succeed in getting anything beyond that 20 to 30 per cent.?—No. That statement requires a little modification. If you take the case of a farm with 500 acres, 400 acres being arable, and 100 acres grass, perhaps you might do with a little less than 60 per cent. by altering your rotation a little, so as to be at rather less expense.

Compensation for high farming.

32,356. You mentioned just now that you had laid out 2,000*l.* on a farm, for which you received 400*l.* in compensation?—I did.

32,357. Now what do you estimate was the value to the incoming tenant of the 2,000*l.* that you laid out?—He has had it four years now, and he has been selling hay and straw ever since. It was of very great value to him.

32,358. Do you think it was worth 2,000*l.* to the farm, presuming that the conditions had been equal at the same time when you made the improvement or laid out that money as when you left it?—It occurs this way; if prices had continued to be the same as they were when I expended that money, it would have been worth the 2,000*l.*; the 2,000*l.* was well expended, and it would have been worth that in the end. But as prices fell, you see you have to compare the money you get with the prices, and therefore 2,000*l.* would have been too much with the fall of prices.

32,359. But you only got 400*l.*; how was that?—I got far too little.

32,360. What do you consider you ought to have got?—I ought to have got about 1,500*l.*

32,361. By what system did the arbitrator arrive at such a result which precluded you from receiving this extra 1,100*l.*?—He sent in his award finding that so much money had been expended during the last four years on such a thing, and so much during the last four years on another thing, and so much during the last two years on another thing, and calculated that so much of that was unexhausted; but he did not give me a penny for that 2,000*l.* which I expended at the beginning of the lease in order to bring my land up to a high state of cultivation.

32,362. Do you say that farmers who began farming well at the commencement of their tenancy have been enabled to pay the old rents for many years even after the price of produce began to fall?—That is true. The farmer's land is his bank; as a rule when he makes money he puts it into his land, thinking he is going to get it out again.

32,363. A good many farmers have been—I will not use a harsh word, I will say precluded from receiving that amount that they ought to have received?—Yes; they have not received that amount which they ought to have received.

32,364. In other words they have had to pay upon their own improvements?—That is in re-taking farms.

Mr. J. S. Forster.

20 July 1894.

That is why I had to leave that farm. They wanted me to pay on my own improvements. They would not bring the rent down to the rent it would have been if I had not had the farm in that high state.

32,365. So that practically your bringing the farm to a high state of cultivation precluded you from getting a reduction of rent?—Exactly.

Cost of removing from a farm.

32,366. Presuming that you had only that farm to rely upon, what would have been the cost for you to remove from that farm to another farm in another district?—I did remove from that farm to another farm.

32,367. As I understand you are a large farmer?—Yes.

32,368. But in the case of a small farmer, how much do you think it would cost a farmer to move his stock, to take the risk of going to another farm, and to recoup himself for the loss incurred in making himself acquainted with the system in vogue in that other district which he goes into?—Do you mean a district a long way off?

32,369. Wherever he can get a farm?—If you get it in the same county of course you know all about the cultivation to begin with.

32,370. How much does it cost to move?—Not much.

32,371. How much would you calculate it at in a per-centage upon the capital?—It would cost only the carriage of the implements and that sort of thing. It would cost you nothing much.

32,372. So that on the breaking of the tenancy you do not think it matters much to a man whether he leaves his farm or not?—If he is interested in a farm, and does not like to move, that part of the business is more sentimental than anything else.

Appointment of valuers.

32,373. Why do valuers in your part of the world regard the Agricultural Holdings Act like a mad bull does a red rag, as you say in your brief?—Because they are practically representatives of the landlords, who have been able to pocket all these tenants' improvements for generations without paying anything.

32,374. Do you think that?—Yes.

Ground Game Act.

32,375. You said something about the Ground Game Act and its being very beneficial, I think?—It has been.

32,376. You know perhaps that there are restrictions upon the tenants in this matter?—I know.

32,377. Would you have those restrictions on killing ground game removed from the tenants?—I would let the tenants have all the ground game and make it like the landlord's income tax.

32,378. Therefore you would favour an amendment of the Ground Game Act, which would give the tenant a right to kill ground game as he pleases?—Yes, I would.

Compensation for improvements.

32,379. Would you say that this proposed arbitrator whom you would set up should be appealed to in the case of an improvement which the tenant would desire to make and which the landlord would not make?—Not in the case of an improvement, but in the case of an alteration of the system of cultivation. Suppose a man wanted to take two white crops running. He could then apply to this man, and say: How much would the landlord suffer; would he suffer anything? This man might say: He will suffer perhaps 1*l.* an acre; if you will pay the 1*l.* per acre, you can take these two white crops.

32,380. Now as regards improvements; would this be your definition of compensation to a tenant—the amount of value that was added to the letting value of the farm?—That is the original intention of the Act.

32,381. And that would be your proposal, broadly speaking?—Broadly speaking, yes.

Railway rates on agricultural produce.

32,382. You say something in your brief about reducing the railway rates, so as to give no preference to foreigners?—Yes, but I do not see any way of avoiding that difficulty.

32,383–4. But you have no instances with you?—I cannot give you the figures.

32,385. Do you think it would be possible to get them and add them to your evidence in answer to the questions I am now putting to you?—I will try to do that.

32,386. If you can get any other instances of preferential railway rates being afforded to the foreigners I should myself very much like to have them?—Yes; but of course the difficulty is that they call these through rates.

Mr. J. S. Forster.

20 July 1894.

Co-operation in Northumberland.

32,387. (*Captain Owen Thomas.*) You say in your brief that you practise co-operation in buying seeds, manures, and foods; what is the system you adopt?—Farmers combine together to use a certain amount of capital, and they appoint a man to buy for them—to keep a store, in other words—it is exactly on the principle of a store.

32,388. Is that a county arrangement?—Anybody in the county can join. One share of 5*l.* entitles you to become a member.

32,389. Are all the farmers members?—No, many of them are not. But I may say that in our county adulteration in foods, and in manures especially, is almost a thing unknown. We are very well off for these things.

32,390. What per-centage do you think you gain by being a member of this society?—I do not gain very much in per-centage. The great gain I make is indirectly, because it enables me to buy at the lowest price things can be got at. I buy less than half what I get at the store, but in regard to the remainder I know I cannot be persuaded by any other body to pay too much because I can find out the prices there.

32,391. I suppose you pay cash?—Yes.

32,392. And all the farmers cannot do that?—No, they cannot.

32,393. Are the landlords on fairly good terms with the tenants in your district?—Yes.

Condition of farmers about 1850.

32,394. (*Mr. Everett.*) You say in your brief that about 1850 the farmers in Northumberland were quite as poor as they are now; was that owing to the fall of prices which occurred then?—It is almost beyond my time to remember the cause, but I remember the result very well — at that time the farmers were very poor.

Improvement of 1850–70.

32,395. Was the improvement of their condition due to the improvement of prices which took place after that year?—We had various wars, you know, and that sort of thing; then gold was discovered. There were two different epochs in the discovery of gold—namely, the Californian and the Australian. These things sent prices up with a rush.

32,396. So that during that period which mended their condition the production of gold proceeded faster than the production of commodities, comparing the one with the other?—It did.

32,397. During all that time did not the improvement of transit and the improvement of machinery proceed still?—Transit and increased production have been heard of ever since I remember. People have been talking about over-production and facilities of transit all along. It is an old grievance, but it is always found to be not substantial.

32,398. Improvements have really been going on all the while?—Of course they have.

32,399. And yet notwithstanding that, during the 20 years following 1850, prices mended instead of going down?—Yes, certainly.

32,400. You think the great production of gold was a great element in that?—Yes.

Effect appreciation of gold.

32,401. Do you know anything about prices in countries where to-day, as for many years past, they measure prices by silver instead of by gold?—No. That gets into the bimetallic question, and I do not understand it.

32,402. In speaking about the effect of the appreciation of gold, might I take it that a largely increased demand for gold would tend to appreciate it just in the same way that a diminution of supply would?—The terms are almost synonymous.

32,403. And that the legislation of one nation after another prohibiting the free use of silver, and therefore requiring the substitution of gold in its place, would mean a largely increased demand?—Yes; that is what happened, I take it, in Prussia.

32,404. Would it not, therefore, be likely that the undoing of that legislation, and allowing silver its old free use, would relieve the demand on gold?—That comes again to the question of bimetallism.

Malt tax.

32,405. Then I notice that the last thing in your brief about remedies is the suggested restoration of the malt tax?—Yes.

Mr. J. S. Forster. 20 July 1894.

32,406. You are aware that malt is quite free from duty now, are you not?—I think the present tax, although it may be necessary for the purposes of revenue, is a very unjust tax to the producer. What would other industries say if they were taxed like that? Suppose we say to the cotton manufacturer: "We "will put a duty on cotton shirts"; he would say: "I "protest against this," and there would be a perfect rebellion. Suppose we turned round and said: "We "are doing it for the purpose of revenue, and wool is "so much more wholesome to wear"; what would he say to it? That is just what you are doing to farmers with this abolition of the malt duty; you are preventing our produce from being consumed.

32,407. What you wish, I understand, is to sweep off the whole of the taxation on the product of the fields?—We must have taxes somehow or the other, and perhaps it is well to put it on the liquor as much as we can; but it would be much better to put it on the malt, because I do not think that would injure anybody, and it would benefit the British farmers and landlords.

32,408. Would not that injure all those cottage people who are now able to buy their malt without any tax and to brew their own beer?—They do not exist in our county.

32,409. In my county all the more respectable labourers buy their malt, and they can buy it now at very nearly the same price as barley, and they brew their beer absolutely free from taxation?—Indeed. I once tasted some home-made beer at Brighton, but I should not like to repeat the experiment.

32,410. You would deprive the poor man of the advantage that he has by the use of his malt untaxed?—He has no advantage in our county.

32,411. Would it not be a good thing if county councils, among the many other things they teach, taught the poor man how to brew his own beer, and so avoid the taxation he has otherwise to pay?—We have had far too much of what they call technical education with us. We are wasting an enormous amount of money. Anyone who has been taught to read and write, and has a good knowledge of arithmetic, can educate himself if he wants it.

32,412. Might it not be a good thing to take up Cobbett's advice to cottagers, and to show them how practically they can help themselves by availing themselves, for instance, of the fact that there is no duty upon the malt, and that they therefore can make their beer for about a quarter of the price which they have to pay for it if they buy it?—The Scotch are a very saving race, who look at every side of a question, but there is never any private brewing in Scotland; there is no private brewing north of the Tyne.

32,413. (*Mr. Elton.*) I do not want to go on about the beer duty, but I understand that your principal idea is that as a rule you would have the money put on things like beer, but that you would make an exception and go back to the malt tax in order to relieve agriculture?—That is what I would like to see.

32,414. That would be an exceptional thing?—Yes.

Compensation for laying down permanent pasture.

32,415. You said something about permanent pasture; the Agricultural Holdings Act is vague in using the expression "permanent pasture." What do you mean when you speak of permanent pasture? I know that it is a vague term, but could you give us any indication of what is in your mind when you say "permanent pasture." Do you mean 15 years old, or 25 years old, or what?—I can tell you a case that occurred to me the other day. A man consulted me about that very question. When I went to see the place I found that he had accepted this condition, that he was to be paid for laying land down to permanent pasture. His predecessor had sown a field very badly, and it had not cost him more than 10*s.* an acre. This land, I should think, lay idle for a number of years, and now it has increased in value from 5*s.* to 15*s.* an acre. Now who is the man who is going to be paid for that?

32,416. Do you call that permanent pasture or what?—We call everything permanent pasture that we are not allowed to plough up.

32,417. Of course that just lands you in a circle. You are told not to plough up permanent pasture; then you say permanent pasture is what you are told not to plough up?—When you take a farm, if the landlord wants anything to remain in grass, he says, such a field shall be permanent pasture and not ploughed up.

32,418. Then permanent pasture is generally a given field, marked A., B., or C., and called permanent pasture?—Yes; it does not depend on the time it has been grass.

Mr. J. S. Forster. 20 July 1894.

32,419. That is very much what I was expecting you to say, as a practical man. Then the permanent pasture clause really relates to pasture which is a matter of contract, and it might lead to great difficulties if you were to try and lay down what is permanent pasture and what is not?—That is a very great difficulty, but still these things should be settled.

32,420. Some farmers think that pasture is not permanent if it is seeded down by the tenant or his immediate predecessor, but that it requires to make it permanent to have been done by the landlord or his predecessor: have you heard of that?—No; the only test we have is that it is arranged that it shall be laid down to permanent pasture.

32,421. It might be 25 years old and yet not permanent?—Fifty, if you like, still not permanent pasture.

Compensation for unexhausted improvements.

32,422. With respect to the improvements at the beginning of the tenancy, of course the principle of the Act is that compensation shall be given for work done by the tenant measured by the value to the incoming tenant?—That is so.

32,423. It is estimated that certain improvements will lose their effect in so many years, is it not?—Yes, it is estimated so.

32,424. And of course if you, some time before that period begins, put down these things it is assumed that they have lost their value?—Yes, but these people forget the reproduction. A farm gets into a circle, it keeps reproducing itself, it keeps reproducing the manure again if it is properly farmed.

Inherent capability of the soil.

32,425. That may be partly in consequence of the inherent capability of the soil, I presume?—That is a thing which nobody can define.

32,426. You did not define it, and you did not even take it into account apparently?—It is is a very difficult thing to define.

32,427. However, in what you have told us already, you did not go into that branch of the question?—I did not take it into consideration.

32,428. And yet it is the proviso to the Act?—I know it is.

32,429. The Act runs, "Provided always there shall not be taken into account." Now I will meet you in this way. Before the period of exhaustion begins, if we may call it so, before the period during which the manurial value would be determtned, before that you have made an improvement; that improvement may be partly due to the inherent capability of the soil and partly to the diligence and cleverness of the tenant?—That is what people have said about those inherent capabilities, and it is resulting very much as they have said it would—it is going to result in merely considering the money that has been spent in the last few years, and that is very unjust.

32,430. Do you say that the valuer could not take into account the outlay of the tenant allowing for the inherent capability of the soil? Could he not take into account what the tenant had done at the beginning of the tenancy?—It would be a very difficult question, but he might make some allowance for that.

32,431. I should submit to you that he could make the allowance, but that the farmer would be surprised on finding there was a deduction made for the inherent capabilities of the soil which enabled the improvement to go on for so long?—Yes, he would be very much surprised to find it so.

32,432. Do you attach any meaning at all to the proviso that the landlord is to have the benefit of the inherent capabilities of the soil?—Yes, in some cases it is very necessary. For instance, where land is really fertile land, but in a state of marsh and the tenant drains it, and makes it into very productive land, it would not be fair to make the landlord pay for the value of that land in its improved state.

32,433. Suppose a man puts a little neck of hedges across a gap and so completes an enclosure, or suppose he makes a little cut in the neck of a drain and so reclaims a lot of land; would that be a case where the landlord would get the benefit of the inherent capabilities of the soil?—Yes, that is so.

Mr. J. S. Forster. 20 July 1894.

32,434. That was the decision I think as far as I remember in Adams *v.* Dunseath, [10 Irish Law Reports], which case you may have heard of?—Indeed, I have not. It has always been a sort of thing which people have approached with fear and trembling, because they saw there was a difficulty involved in it.

32,435. It is quite obvious that it is a very difficult question, and I was only trying to see how far you had allowed for it. In your case, you will excuse me saying that, you treated it as a definite sum in subtraction, 400*l.* from 2,000*l* leaving so much, and you made not the faintest allowance for the possible effect of the proviso?—I made no allowance for the proviso. The soil was better in every respect at the end than it was at the beginning.

32,536. I know the difficulty of the clause and how very difficult the calculation must be?—It is almost an impossible one.

32,437. You can always settle everything in the world of course by splitting the difference or tossing up?—Yes.

Sale of cattle by live weight.

33,138. (*Sir Nigel Kingscote.*) I should like to ask you one question on a different subject. How are cattle sold in your neighbourhood, are they sold by weight?—A jobber comes and buys a great many of mine from me privately; others are sold by auction at the marts where you have the option of weighing them if you like; and the rest are sold by commission at Newcastle market.

32,439. Do you think it advantageous to the farmer generally to sell by weight?—I think it would be a very good thing indeed, but unfortunately farmers are so very difficult to alter in their ideas. Selling by weight is a most excellent idea. Why should we sell beef by estimate and corn by weight—we might as well sell our barley by the stack.

32,440. Should you say that every market ought to have a weighbridge?—Certainly.

32,441. It would be far better for the farmer if it were more used, would it not?—Certainly it would. It stands to reason that the jobber is a better judge of weight than the farmer is.

32,442. (*Mr. Clay.*) You have these weighbridges just now, but they are not used because they are not compulsory?—That is so. These butchers and jobbers have been throwing as much cold water as they can on them, and laughing them out of use.

Mr. J. S. Forster. 20 July 1894.

32,443. (*Sir Nigel Kingscote.*) Would you like to see sale by weight compulsory?—Yes.

32,444. (*Mr. Elton.*) You do not believe in the idea that I have heard expressed by farmers, that the man who has seen the animal since it was born knows how it is packed better?—Can tell its weight better?

32,445. Yes?—No, I do not. There was another question about the importation of store cattle which I wanted to mention.

Slaughter of cattle at port of debarkation.

32,446. (*Sir Nigel Kingscote.*) I was going to ask you about cattle diseases in reference to that?—I was thinking of the restrictions on the importation of store cattle. That at present is a matter of great inconvenience to us. We do not know what ground we are standing on. If they are going to keep them out for good I should go on breeding. I breed about 60 calves every year.

32,447. You would like to see one thing or the other?—Yes.

32,448. I think you have said that you wish to see all store cattle coming from abroad branded?—I meant that to apply to fat cattle as well.

32,449. Fat cattle as well?—Yes; of course store cattle would require to be marked, but when they had been here two months they might be considered English cattle.

32,450. Would you prefer to see all cattle killed at the port of debarkation as long as it was the universal law, or would you sooner see cattle assumed to be healthy and after quarantine allowed to go into the country?—I have not the least choice, if you only tell me which way it is to be. I can adapt myself to either way.

32,451. You deprecate the uncertainty?—It is the uncertainty that is playing the mischief. I have had to reduce my cattle breeding one half this year, because very likely there may be an American glut next season.

32,452. (*Mr. Clay.*) Was that from fear of getting disease from abroad?—No; from the fear of getting a glut of store cattle, when it would not pay me to breed.

22,453. (*Sir Nigel Kingscote.*) But you would like to have immunity from disease?—Really this uncertainty is troubling us so much that I would almost prefer to run the risk.

The witness withdrew.

Adjourned to Thursday next at 12 o'clock.

Fifty-sixth Day.

Thursday, 26th July 1894.

PRESENT:

The Right Hon. GEORGE JOHN SHAW-LEFEVRE, M.P., in the Chair.

Viscount Cobham.
The Right Hon. Baron Rendel.
The Right Hon. Henry Chaplin, M.P.
Sir Robert Nigel Fitzhardinge Kingscote, K.C.B.
Robert Giffen, Esq., C.B.
Captain Owen Thomas.
Francis Allston Channing, Esq., M.P.
John Clay, Esq.
Cornelius Neale-Dalton, C.B.
Robert Lacey Everett, Esq., M.P.
John Gilmour, Esq.
George Lambert, Esq., M.P.
William Cutlack Little, Esq.
Walter Hume Long, Esq., M.P.

Herbert Lyon, Esq., *Secretary.*
R. F. Crawford, Esq., *Assistant Secretary.*

Mr. E. Atkinson. 26 July 1894.

Mr. Edward Atkinson called and examined.

32,455. (*Chairman.*) I believe you are President of the Boston Manufacturers' Mutual Fire Insurance Company?—Yes.

32,456. In connexion with that I believe that there are a number of manufactories combined together for the mutual prevention of loss by fire and payment of indemnity?—Yes.

32,457. For many years past I think you have given attention to the subject of prices and to economic questions in the United States?—Yes.

His experience in economic questions.

32,458. And that you have written largely upon the subject of the material progress of your country, beginning, in 1861, with a pamphlet on "Cheap Cotton by Free Labour"?—Yes.

Mr. E. Atkinson. 5 July 1894.

32,459. In 1879, when your country restored the specie standard on a gold basis, I believe you began a close study of the economic conditions of the Mississippi Valley, as it was even then thought that the political power would be centred there?—Yes.

32,460. In 1880 I think you published an article in the *Fortnightly Review* in which you showed the improvement in the processes applied to agriculture in milling and in the removal of crops by rail and by water, and you prophesied that these improvements on the process of distribution as well as on production would presently make 34*s.* a quarter as good a price to the Western farmer as 50*s.* had been theretofore?—Yes.

32,461. Since then you have dealt with that same question at two meetings of the British Association, and especially in 1887, when you were here in this country as Commissioner of the United States Government to report on bimetallism in Europe?—Yes.

Effects of improvements in cultivating wheat in the United States.

32,462. Will you kindly state your view of the effects of the various improvements in the cultivation, in the gathering in of the wheat crops in America, and also in the reduction in railway fares and freights upon the price, especially of wheat?—Yes; taking wheat as one of our minor crops, I will speak upon that. The various elements of reduction consisted, first, about 1876, in the invention of the self-binder. There had been previously a great many improvements in cultivation by the gang-plough and other machinery, but the self-binder removed the only limit to production. It then became a matter of land and price, and as, of course, the land was practically unlimited it became a question of price. Previous to that it had required what you may call an army of agricultural tramps to bind the wheat crop when it was even harvested by the machine. It took 5 to 7 binders to follow every harvester, and as the season is short they earned almost any sort of wages that they chose to demand; and yet our crop rarely exceeded, if ever, 300 million bushels. The self-binding harvester was first perfected by the use of wire, but it was found that the little bits of wire that were left upon the field got into the guts of the animals who fed after the crop was removed and did injury to them; and so about 1876 the twine-binder was completed, and you will observe by the statistics of our crops that the wheat crop immediately advanced to 400 and 500 and 600 million bushels.

The self-binder.

32,463. (*Mr. Channing.*) From what previous figure?—From an average of about 300 millions as a maximum. I do not now recall the exact quantities. It was on that additional crop of wheat made between 1876 and 1880, which you happened to need over here, that we imported the specie on which we resumed specie payments in 1879. The exports of wheat from the United States in those four years almost exactly corresponded to the import of gold. I regard that twine-binder as the most potent invention.

32,464. (*Chairman.*) I do not know whether you have looked at the list of prices of wheat year by year as given in the appendix to our evidence here from 1869 to the present date. If you look at those prices you will see that there occurred about the year 1879 a change in the condition of things, and that for the first time in the list which is to be found there a very deficient harvest was not accompanied by an increase of price, but rather the contrary; that the price fell, notwithstanding the fact of a very indifferent harvest, the worst harvest probably ever known in this country?—Yes.

Reduction of freight for wheat.

32,465. That would seem to be coincident with this great change that you speak of, due to the extension in the cultivation of wheat, to the invention of the self-binding apparatus?—Yes. That was exactly coincident with the invention of the self-binder, but it was also coincident with an even more rapid fall in the price of transportation in the United States, and the extension of the steamship service. It cost, from 1865 to 1870, 40 cents, diminishing to 30 cents a bushel to carry wheat from Chicago to New York by all rail, now it costs by rail and water 10 cents from Chicago. Then again, about that time the great North-Western territories, the two Dakotas, and all Northern Minnesota were opened.

Wheat growing in the Dakotas.

At the price of that day, a single wheat crop on sod land would sometimes pay the whole cost of the farmer's improvements; and the Dakotas, which at about that date for the first time appeared separately in the list as distinct from other territories or States, have since gone up to 80 or 90 million bushels. If you will refer to our statistical abstract you can see how they progressed. In South Dakota the farmers have in 21 years become very independent, and a great many of them have retired; they have grown rich—that is, rich at the farmer's standard. Of that I have some extremely valuable testimony from South Dakota, the southern half of that great territory which is now a State. I can give you the details, if you want them, in exact terms.

Mr. E. Atkinson. 26 July 1894.

Reduction in cost of cultivating and marketing wheat between 1873–87.

32,466. I see in your paper read before the British Association in 1892, you say that between the years 1873 and 1887 there had been a great advancement of science, resulting in a reduction in the cost of delivering wheat in London from the principal wheat centres of the United States, 1,200 or 1,500 miles from the seaboard, first, in planting and reaping, of 2*s.* per quarter; then in elevating and handling, 1*s.* per quarter; in milling and sacking, 3*s.* per quarter; in railway charges, 11*s.* per quarter; and in ocean transportation, 5*s.* per quarter, making a minimum reduction per quarter, from 1873 to 1887, of 22*s.*?—Yes.

32,467. You then put the average price in Mark Lane, from 1870 to 1873 inclusive, at 54*s.*, and with that reduction of 22*s.* you brought out the result of 32*s.* as the reduced price owing to these various charges?—That was a very carefully prepared statement based on exact information from some of the best firms, from the millers, and especially from the makers of agricultural machinery, who are members of the Insurance Company with whom I am in the closest relations, knowing all about their business; and that exactly coincided with my forecast published in the *Fortnightly Review*. Since that date there have been other very material improvements. For instance, the greatest change since then in the cost of transportation had been west of Chicago between Minneapolis and Chicago and from Duluth to the seaboard. The rates of traffic west of Chicago in bringing the wheat from the farms had been very much higher, but since that date there has been a reduction in the rates of transportation west of Chicago, so that the wheat is now brought to the mills at a lessening cost. I cannot give the exact data, but it is very much less. Then, again, there have been vast improvements in milling. The roller process has become universal, and there have been a great many minor improvements. For instance, one of the heaviest charges was insurance. The dust of the great flour mills exploded then, and the cost of insurance was three or four per cent. a year. The rate of insurance is down now to less than one per cent., as that danger has been entirely obviated by the introduction of what are called dust-collectors. Then the cost of cooperage has been very much reduced. But there has been a greater reduction, because in our export traffic we substitute the bag for the barrel. There has been a further small reduction since that date in the railway traffic from Chicago to the seaboard. I should say that the amount of capital required in the production of wheat has been greatly reduced by the lower price of agricultural machinery. I cannot fix exact dates, but the agricultural machinery which they now use costs the farmer much less than half it did prior to 1870.

32,468. The improvements you are now speaking of, as I understand, have occurred since 1887?—Since 1886 there has been, I should say, such a reduction in the various charges as to lead me to forecast 25*s.* a bushel in Mark Lane as a sort of normal price at which our supply will not diminish.

32,469. Before you come to your forecast I should like a little further explanation of these various changes?—When you asked me to come here I thought I would strengthen myself, and so I sent out to Minneapolis to one of my correspondents there to get the exact changes that have occurred since that article was published in *The Miller*, from which you have quoted. I have not received the replies, but if you will allow me I will later on put them in. I should say there would have been a moderate additional saving in planting and reaping, an additional saving in elevating and handling, a very considerable reduction in milling and sacking, another reduction in railway charges, and another reduction in ocean transportation. My impression is that these changes will, as we say on our side, pan out about 7*s.* per quarter.

32,470. (*Mr. Chaplin.*) Since when do these reductions date that you are speaking of now?—Since 1887 or 1886 to the year on which my data of 1887 were based.

32,471. (*Chairman.*) As I have already said, the reductions in the cost of production and of carriage to this country between 1873 and 1887 amount to 22*s.* a quarter?—That was the estimate on all rail.

32,472. That would account for a reduction in the price of wheat of from 54*s.* to 32*s.*?—Yes.

32,473. Since then there have been, at various times, these other reductions spread over the period ——?—Yes, spread over the period subsequent to 1887.

32,474. Other improvements in transportation, resulting in a reduced cost of production and distribution amounting to something like 7*s.* per quarter?—That, I think, will be proved when I get the figures.

Saving effected by the self-binder.

32,475. Apparently this latter calculation does not take into account the self-binder?—The self-binder had already come in in "planting and reaping" before 1886.

32,476. It is included in "planting and reaping"?—Yes.

32,477. Then, may I take it that the actual saving effected by this self-binding apparatus was not very considerable, but that it enabled an enormously greater crop to be taken in?—It amounted to about 2½*d.* per bushel.

32,478. Therefore the actual saving in cost was not considerable, but the effect of the self-binding apparatus possibly enabled an enormous extension of territory to be put under cultivation?—Yes. It is like what will happen if the impossible cotton-picker is ever invented. That will double or treble the cotton crop at once, the limit of cotton is not in growing but in picking.

32,479. The facility afforded by this self-binding apparatus enabled a very great extension of land to be put under cultivation in wheat?—A very great extension. My point is that the farmer at the north-west was as well off at the 32*s.* as he had been at the 54*s.* That was very bitterly contested at the time I put it forward; and I was subjected to some pretty severe attacks, but my forecast has been justified. I would point out two new factors which have come along in the last decade. The straw, even up, I think, to 1887, was mostly burned in order to get rid of it. It is now in part compressed to make a good fuel for the harvesters and the reapers; and all the rest has a very distinct market value. That is an additional factor in the remuneration of the farmer; but yet more is the enormous change caused by the fact that the all-wheat system has passed away. I do not undertake to say that the farms in Dakota or Minnesota, or anywhere in that section, devoted exclusively to wheat are to-day a profitable undertaking; but those farms are being divided up.

32,480. I should like, before you come to that, to put a few other questions, as you are going a little faster than I wish. I do not wish to disturb the general drift of your evidence, but I think there are a few questions I should like to put to you before we come to that. The improvements that you speak of between 1873 and 1887 were extended, I presume, over that period, and, I gather from your brief, that they enabled you to compete with the importation from British India?—Yes.

Competition of Indian wheat, 1880-86.

32,481. There was a great extension in the imports of British India between 1880 and 1886, I believe?—Yes.

32,482. In 1885 and 1886 they had reached their maximum; but in spite of those great importations your country was able to compete with India in our markets in consequence of these great reductions in the cost of production and in the freight?—We had at first regarded the Indian competition as something rather serious; but it appears to have culminated, and, on investigations which I have made myself in various ways, it seems as if the amount of land that could be spared from Indian food crops, near enough to a railway to grow wheat, is not very large, and land which is sufficiently near to a railway to export wheat cannot be spared to any considerable additional extent. I am inclined to think that we can meet India without difficulty. I am more afraid of the Argentine Republic.

32,483. Then I gather from you that in 1887, when you wrote the paper which you read before the British Association, you were able to account for the full reduction which had taken place in the price of wheat up to that date by the various improvements in production, and by the reductions in railway charges and freight up to that date?—I have ceased to regard the competition of India as an important factor; their wages are very low, and their effectiveness is very low. Our wages are very high, and our effectiveness is very high, and therefore our low cost more than off-sets the India cost. Low-priced labour is apt to be very dear.

Competition of Argentine wheat.

32,484. Since 1887 a fresh competitor has appeared on the market, namely, the Argentine Republic?—Yes.

32,485. And the imports from the Argentine Republic have been growing at a great pace, and have risen from a million hundredweight in 1887 to 2,800,000 cwt. in 1890; 2,400,000 cwt. in 1891; 3,400,000 cwt. in 1892; and as much as 7,859,000 cwt. in 1893, bringing the Argentine Republic into the position of the third greatest importer into this country, next after your country and Russia?—Yes.

32,486. Now, in your opinion, have the improvements which have been effected since 1887 been sufficient to enable your country not only to meet the continued competition from India, but also this further competition from the Argentine Republic?—That is a question that no one can yet reply to. So far as area and productiveness of land are concerned, the land on the Paraguay and Parana rivers can feed the world with wheat and supply the world with cotton.

32,487. I do not say looking to the future; I am now speaking of the past?—So long as the people have a depreciated paper currency and an unstable Government I should not regard them as likely to increase crops very rapidly, although their orders for machinery come in very large quantities to America. I know one of my clients had a single order for 25,000 steel ploughs for the Argentine Republic a year or two ago—one order. In many ways the ability of the Argentine Republic to produce is being proved, and I do not think we can any of us here tell how far that is to go.

32,488. I am speaking rather of the past than of the future; up to the present time, without regard to the future, do you consider that this reduction in the cost of production has enabled your farmers to compete in the English market with both India and the Argentine Republic?—Our farmers are very well off; they have been reducing their mortgages down to the end of the year 1892. I except the panic year—1893—from all consideration; I do not take that year since April and until the present date as a rule for anything. The reduction of farm mortgages went on rapidly from 1887 to 1892, and is probably suspended at the moment, but the facts are, that more than 60 per cent. of the farmers in the Mississippi Valley are free of any mortgage whatever; the other 40 per cent. have a mortgage on their property, that is, on their land and buildings, of less than half their value.

Effect on prices of wheat imports from the Argentine.

32,489. I should like you, before you go further, to look carefully at this table that I have adverted to more than once; you will see that up to 1892 the price of wheat was maintained at about from 32*s.* to 33*s.*—the price you mentioned in 1887; then there was a great drop from 1892 to 1893, and the price in 1893 was 26*s.*, and apparently it has been maintained at that low rate since. If one couples that fact with the enormously-increased importation from the Argentine Republic in the year 1893 of nearly eight million cwts., as compared with two or three million cwts. in the previous years, it would seem to indicate that this further reduction of price in 1893 was due to the imports from the Argentine Republic?—You know that when you add a little to an already sufficient supply, the effect of a small excess upon the price is entirely out of proportion to the magnitude of that excess.

32,490. That would very likely be so, but is it not perhaps reasonable to suppose that this further reduction that took place in the price in 1893 was largely due to the influence of these importations from the Argentine Republic?—I should think it much more due to the enormous crop of the United States in 1891, which came to market in 1892, and on which everybody was misled.

32,491. But the price did not fall till 1893?—There was more wheat than the people could use who had the money to pay for it, and that surplus affected the price. That, so far as our country is concerned, has to a certain extent checked the increase of the area devoted to wheat. The crop now depends on the season rather than on the land. I should say that, in my own judgment, the effect of the Argentine supply had been the effect of a very moderate additional percentage added

Mr. E. Atkinson.
26 July 1894.

to a stock already sufficient, and that that stock was already sufficient on account of the most unexpected harvest of 1891 in the United States, which came to market in 1892, and may not yet have ceased to exert an influence.

Cause of fall in price of wheat in 1893.

32,492. Then you consider that the fall in price in 1893 should be accounted for by the enormous harvest of 1891, which added largely to the stocks of the world, without taking into account the fact that the Argentine Republic came into the competition?—Of course each addition has an accelerating effect on the fall in price; but I think you would have had low prices: at any rate I should myself have expected prices to be almost if not quite as low without any regard to the Argentine. Argentina has relatively increased on itself, but in respect to the total supply of wheat of the world, it is still a relatively unimportant factor, rapidly increasing in its influence however.

32,493. Of course it is possible that in spite of those reductions in the cost of production and carriage, the American farmer might have got a larger price if it had not been for the imports of the Argentine Republic?—Yes, and then he would have increased the area of land in wheat.

Reduction on cost of producing and distributing wheat since 1887.

32,494. Then you account for the reductions in price up to 1893 in part by the great reduction in the cost of production, which you have estimated at 7*s.* a quarter since 1887; in part also to the very abundant crop of 1891, and also to the increased area of wheat production?—That is my view, including distribution with production.

32,495. Now, looking to the future, I would ask you what your view is of the introduction of this fresh competition from the Argentine Republic?—We are meeting it by opening a new wheat country in our own land, which is better situated.

Wheat growing in the Argentine.

32,496. One word upon the prospects of the Argentine Republic; you have already told us that you are aware of one firm alone which has received an order for 25,000 steel ploughs?—Yes, a single order among many.

32,497. Showing, I presume, a very great extension of cultivation?—Yes.

32,498. (*Mr. Chaplin.*) Is that in Argentina?—Yes, on the Paraguay and Parana rivers. I would say to you if anyone has any idea of looking that up, that there was an exploration of the Paraguayan and Parana rivers on the part of our Government many years ago, which I studied; and you may compare this: The prairies of the United States bore the buffalo grass, which grows only a few inches high, it is very nutritious, and over the prairies the buffaloes formerly ranged without stamping it out. That grass, for a time, furnished the supply of feed for the ranching system of cattle-raising; but the ranch system, so called, of cattle-raising soon exhausts itself, for the heavy beef cattle, permanently pastured, stamp out the roots; whereas on the Pampas on the Paraguay and Parana rivers, the pampas grass grows continuously—I do not know how high, say two or three feet—and bears unlimited herds of cattle, as you know; that land is equally good for wheat and cotton. So that what may come from the Argentine we cannot tell. If you could only get a British Protectorate over it, and establish a sound currency and a stable Government, we should have to look out for our exports, but it would not be of any consequence to us in our internal arrangements.

32,499. In America, you mean?—Yes.

"Pan Handle" of Texas and wheat growing.

32,500. But you could not compete with them?—We have just opened the Pan Handle of Texas, which covers 30,000 square miles. Bear in mind that our whole wheat field only covers 60,000 square miles, and the Pan Handle of Texas, which has been a grazing country corresponding to the Pampas, and was supposed to be fit only for that, has within the last five years been found to be one of the best wheat sections in the United States, five years out of six.

32,501. (*Mr. Lambert.*) Would you mind showing me where it is?—It is there (*pointing to map*). It is called the Pan Handle owing to its peculiar shape running up here. It produces a very hard wheat, and it has 22 inches of rain every year, five years out of six. Then it is an admirable fruit country.

32,502. (*Chairman.*) And that is being gradually opened up by railways, I understand?—Not gradually; it is being very rapidly opened up. There are 30,000 square miles in the Pan Handle. But take the Red River Valley. In the Indian Territory and the north of Texas you may put the whole wheat crop of the United States without any trouble whatever. That land is now occupied, but no great portion of it is in use. On the Red River the soil is 10 to 20 feet deep and is inexhaustible.

Mr. E. Atkinson.
26 July 1894.

32,503. I believe the total acreage devoted to wheat in the United States, in comparison with land devoted to other crops, is not considerable?—It is very small.

Ratio of wheat area to cultivated in United States.

32,504. What is it?—It is 2 acres in 100 of our area, and about 4 to 5 acres in 100 of our arable land. It is rather a border crop than a farmer's crop. It is now becoming a farmer's crop, with the improvement in agriculture and the application of the intensive system, and the great discoveries of Florida phosphates and other elements, coming in to support an intelligent system of farming. Wheat is a cash crop. It takes the farmer but a little while to lay down a wheat field in the spring; it does not interfere with his other work, and then it is harvested by contract by the harvesters who go about the country; so that without any interference with his mixed farm work, he goes on and produces his wheat as an absolutely sure cash crop, just as the cotton of the south is now grown; you cannot say what it costs; whatever the farmer gets is so much additional money, and he will have expended a very small part of his time upon it. I do not see any stop to it. I think that cheap bread is assured for all time to come.

32,505. (*Mr. Everett.*) Have you with you a list of the acreage of the wheat grown in the United States during the last 20 or 30 years?—You will find the facts exactly in the statistical abstract of the United States which you have here. I have not a very recent one, but in my article in the *Fortnightly Review*, and elsewhere, I made a map of areas in which the size of the wheat field and the corn field and the cotton field was exhibited graphically in relation to the area of the several States. In that map you have it as in 1878, but it has changed since then.

32,506. (*Mr. Channing.*) That map merely gives the areas actually under cultivation, I suppose; but could you give us the total amount of land suitable for wheat in the United States, and the amount which is actually under cultivation now?—Nobody can tell the total amount suitable. There is a vast area which is suitable in the north; and in the south a great area, notably in Virginia, which has been skinned under slavery, but which is now in the process of renovation.

32,507. You cannot give an approximate estimate of what remains to be developed?—No.

"Pan Handle" of Texas and Indian territory available for wheat.

32,508. (*Chairman.*) This district that you speak of in North Texas has only been discovered of late years, so to speak, or rather it has only just been discovered that it was suitable for wheat-growing?—That is so.

32,509. That alone would supply 30,000 square miles, which is equal, did you say, to the total area now under wheat?—No; it is half the area, the total area being 60,000 square miles; but with the additional counties close by over 60,000 square miles are available. Then, too, there is the Indian Territory north of Texas as yet practically unoccupied, which covers 50,000 square miles of the most fertile land in the country. We have but lately extinguished the Indian titles, and that is just beginning to be productive.

32,510. Wheat appears to be a crop which is grown when the land is first broken?—Yes.

32,511. For how long is it exclusively grown?—I suppose that depends upon the price.

Grain crop of United States.

32,512. Generally speaking, is it two or three years, or what?—I could not tell you. I can only point out to you that in 1873 our total grain crop of all kinds—maize, and wheat, and oats—was 1,538 million bushels; in 1883 it was 2,623 million bushels; in 1887, which was a short crop year, it was 2,660 million bushels; and in 1891, a year of great crops, it was 3,533 million bushels. The production of grain has grown up from an average of 32 or 33 bushels per head of population, to 56 or something like that, and keeps going on; but our corn crop—our maize crop, you call it—is our great crop. These figures I have taken from one of 30 tables of that kind which have just been published in a book by D. Appleton & Co. on the United States as a record of the progress of the last 50 years. It is rather an important book.

32,513. I see that this includes corn of all kinds?—Yes.

Mr. E. Atkinson.

23 July 1894.

32,514. Indian corn or maize, which is our great crop, wheat, rye, oats, barley, and buckwheat?—Yes.

32,515. (*Mr. Lambert.*) Is that book written by you?—I wrote the preface, that is all.

32,516. Who is the writer of it?—It is edited by Professor Shaler, and contains articles by many of the principal scientific men in the country.

Increase in wheat area in United States.

32,517. (*Chairman.*) May we take it that from 1873 to 1887, the latter being the date when you wrote that paper for the British Association, that the area under wheat cultivation in your country was continually increasing?—Yes.

32,518. In spite of he continual fall in prices?—It has increased, but moderately since 1887.

32,519. I mean up to 1887?—Up to 1887 there was a steady and constant increase; in the statistical abstract you will find that.

32,520. Showing that the lowering of prices did not affect the production?—Yes.

32,521. (*Mr. Chaplin.*) Since 1887?—Since 1887 the amount of land devoted to wheat has not, I think, considerably increased.

32,522. Latterly there has been a great decrease, has there not?—There has been a decrease in certain places, but an increase in others.

32,523. How is the balance?—I think the changes come very near to a balance; the abstract will tell you exactly. This addition of Texas is an important factor which has not yet been appreciated.

32,524. (*Chairman.*) Mr. Everett points out to me that this table in these statistical abstracts shows that the area of wheat under cultivation in the United States rose from 20 millions in 1872 to 32 millions in 1879 and to 37 or 38 millions in 1880, and that at that point it remained about stationary till about 1887?—Yes. The system of mixed farming has come in since then, and land which had been devoted to all wheat is now devoted to other crops.

32,525. From 1887 to the present time it has rather fallen?—If anything.

32,526. It rose to 38 millions in 1889, and it was at 38 millions in 1892, and it fell to 34 millions in 1893?—Yes, thereabouts, I should say.

32,527. Still it is not a considerable reduction?—Not a considerable change in area, but a great change to a better system of cultivation.

32,528. Therefore we may say that since the year 1880 the area of wheat under cultivation has been about maintained?—Substantially, and depending on the season rather than on the area. 1891 was the wonderful season for everything.

32,529. What has been the result on the condition of the producer, the farmer, in the neighbourhood during that time?—That opens a very big question.

Condition of farms and farm mortgages in Michigan.

32,530. I do not want to go minutely into it, but generally?—I can simply say that it became evident to me in 1885 that the balance of power had gone to the Mississippi Valley. That was a year subsequent to a year of some commercial depression, and the hue and cry then began about the ruin of the American farmer, and about his being overloaded with mortgages, and being taxed out of existence. I began my investigations in the State of Michigan through the Commissioner of Labour, a very intelligent man. Under the laws of Michigan, which was a wheat and corn growing state alike, a census of farm mortgages had been taken. The census was taken of about one half of the farms of Michigan, in point of number—90,803. Of that number 43,079 stated that their farms were mortgaged, a few refused to reply, and the rest stated that their farms were not mortgaged. The true value of the farms which were mortgaged was 100 million dollars, and the mortgage debt was 37½ million dollars, so that you could immediately imply that the farm mortgage of the State of Michigan did not come up to 25 per cent. of the true farm value of all the farms.

32,531. (*Mr. Everett.*) In what year was that?—I said 1885, but I see that this was in 1888.

32,532. (*Mr. Giffen.*) Whose valuation is the "true value"?—The valuation is made by the Commissioner on the basis of inquiries of the farmers themselves. The assessed value was somewhat less, but the general conclusion in Michigan was that the assessment was about 80 per cent. of the true value.

32,533. (*Mr. Chaplin.*) This is limited to Michigan, is it?—Yes, and will lead up to what I still further have to say. This gentleman, Mr. Heath, had the sense to ask many of these farmers where they came from, and how much money they had when they came into the State. There were 31,570 farms owned or occupied by men of foreign birth; a few of them said they had brought some money; 23,500 had none, and when they began they borrowed on mortgage. The amount of money which they all brought in together was about 4½ millions of dollars, and their mortgage debt at the time was about 11 millions, making 15,800,000 dollars of money not made on the farms. The assessed value of these specific farms was 52½ millions, and the true value was 62,672,000. It follows that these 31,570 foreigners, who came from Germany, Canada, England, Ireland, Holland, Scotland, and nearly every other country in the world, had accumulated a landed property of 50 million dollars, with their stock and tools in addition. That did not seem to me a very disastrous condition of the American farmers of Michigan, but the hue and cry went on from the so-called Populists and others that the American farmer was ruined and could not bear his mortgage, and they made application to the Congress of the United States for a special appropriation of one million dollars for the purpose of investigating the mortgages. That appropriation was made. Two of the most trusted men in the country were charged with the duty. You will bear in mind that in the United States every deed and every mortgage is registered, but the partial payments are not always discharged on the record. Therefore the record of mortgage is probably somewhat larger than the fact of mortgage. Every county register has been searched and all the data have been compiled—and they are more sure than census data usually are, because the results are absolute. They prove what I have stated to you, and what is given in the *Forum* article for May 1894 and in the address to the Chamber of Commerce of New York in April. In general terms they are to this effect—that more than one half the farms of the United States are entirely free of any mortgage; the other half are mortgaged for less than half their value. The total farm mortgage of the United States on occupied farms, treated distinctly and separately from suburban property and from speculative property, is less than 10 per cent. of the value of the occupied and improved farms, constituting about one sixth part of the area of the country.

Mr. E. Atkinson.

26 July 1894.

Farm mortgages in United States.

32,534. (*Chairman.*) Is this evidence confined to the Mississippi Valley?—This gives you the whole country.

32,535. Including the Eastern States as well?—Including the Eastern and the Western and all the States. In 22 specific States and territories which have been searched as a fair example of the whole, a special report has been made by the authorities of the census, and that I will give you. That proves that a fair statement may be made that over 60 per cent. of the farms of the Mississippi Valley are free of mortgage, and that the rest are mortgaged less than half their value.

32,536. (*Mr. Giffen.*) How far back did they search the registers to ascertain existing mortgages?—This was all done in one year—in the year 1889.

Liquidation of mortgages since 1889.

32,537. (*Chairman.*) Then up to 1889 there was no evidence to show that the farmers had suffered in any way from the low prices, because at all events their farms were only mortgaged to this small amount?—Since then I have addressed a circular letter to the Commissioners of Labour or to the Secretaries of State in every State, and I have secured returns on my own behalf from Michigan, from Minnesota (which is a great wheat State), from South Dakota, and from other great grain-growing States. Down to the end of the year 1892 the liquidation of mortgages continued, and it had not stopped, and the farmers were more independent in 1892 and free of mortgage than in 1889 and 1890.

Loans by bankers and mortgages.

32,538. (*Viscount Cobham.*) Do the farmers borrow largely from their bankers?—This brings out another singular fact. At the present time about one half the debt due on farm mortgage is due to citizens of the same States in which the farms are, and the debt to what you may call bankers or mortgage companies, is very small. They have not in the West such a system of banking as you comprehend.

32,539. The bankers do not lend money otherwise than upon mortgage?—No, not upon farms.

32,540. (*Chairman.*) A banker advancing money to a farmer would take a mortgage and register it, I presume?—Yes. The ordinary or commercial

Mr. E. Atkinson. 26 July 1894.

banking is done on commercial paper. The lending on mortgage is done by trust companies, by mortgage security companies, and by special organisations. For a long time—for 25 years—there was an enormous business and an extremely safe business in lending money on farms, but down about the year 1884-85 the farmers had become so independent that they would no longer pay the excessive rates which they had paid, and as the mortgage security companies, or a good many of them at least, could not get good farm mortgages, they went into speculative investments and came to grief. If you will investigate any of these farm mortgage companies that are now in process of liquidation you will find that the difficulty was not on the farm mortgages, but on the suburban property or some other security or insecurity entirely distinct and separate from a true farm.

32,541. I suppose the competition had brought down the rates of interest for the mortgages on farms, and the rate being insufficient to act as an inducement or to keep up their dividends, they then lent money upon other kinds of property of a more risky character?—Yes.

32,542. Your information goes down to 1892, I understand?—Yes.

32,543. Down to that date at all events there was no evidence that the farmers were in any difficulties at all, but the contrary?—They are the biggest creditor class in the United States, and the most independent.

32,544. The small amount of mortgages upon their farms would indicate that they were fairly well off?—The mortgage on the city of New York and the 10 adjacent counties is bigger than the entire farm mortgage of the whole of the United States.

Freeholds and tenant farming.

32,545. What is the proportion of these farms held as freeholds as compared with tenancies?—There is a very large amount in the South of what you may call tenant-farming, but it is more the metayer system. The negro takes land on shares, and he is slowly but surely becoming a landowner himself. But eliminating that, something less than 20 per cent. of the northern farms north of Mason and Dickson's line are worked by tenants, and tenant-farming is growing slowly but surely, not in the way of aggregating great masses of land for the purpose of getting rent as you have over here, but by the fact that the first settler has become prosperous and has got his property and his farm; he moves to the town and lets his farm to his son or to some of his hired men who have stood by him. In that way there is a slow increase of tenant farming. But under our Gavelkind system of divestment of land——

"Gavelkind" in United States.

32,546. (*Mr. Lambert.*) What is that?—Equal inheritance if there is no will.

32,547. (*Chairman.*) The custom is to divide, is it not?—The custom is to divide. The great farms are all being broken up, and the bigger farms are becoming lesser. You will find in this "Forum" article the exact data of the size of farms. The average is 137 acres. That average is much nearer the fact than such averages are apt to be, because the larger part of the farms are of moderate size.

Condition of American farmers up to 1892.

32,548. Then, as I have said, up to 1892, the condition of the farmers was such that there is no indication that they were in any way depressed?—Not the men who farmed with brains. Down to a certain date, anybody, whether he had had any experience or not, could, during a period of high prices, go out and break up a lot of land, plant it with corn or wheat, and almost pay for it with two or three years' crops. That is gone by. Moreover, the Government land has all been taken up, and it is fortunate that it is so, because as long as men could move over a great area and keep breaking up new soil and working virgin properties instead of cultivating, there was no security for a true system of farming. We are now on the way to a very much higher type of farming, and the man who farms with intelligence is just as sure of a good subsistence now as ever he was.

Effect of opening up of new wheat areas on farming in the Eastern States.

32,549. I suppose that this opening up of new districts by the increase of railways and the lower freights told against the farmers in the Eastern States?—They have diversified their crops. At a certain date in Western competition the wheat of Pennsylvania and New York States fell off in quantity, and came down to a certain point, but there it has been maintained. There is about as much wheat grown in and around Genesee County in New York State—formerly the great wheat centre—now as ever there was, but it is no longer a single crop; it is part of a great intensive system of farming grown in part for the straw and in part for the rotation.

Mr. E. Atkinson. 26 July 1894.

32,550. Has there been much reduction in the value of the farms in those States?—There has been a considerable reduction from the fancy rates of 1873. The Western competition was felt in New York and Pennsylvania and New Jersey much earlier than it was here.

32,551. Up to 1873 had there been a rise in price of the farms in those districts?—Yes, but at that time everything went up and we had what some have called a financial debauch.

32,552. Since 1873 in those States, owing to the competition of the North-western States, opened up by the railways and the reduction of freights and so forth, I believe the price has gone down for those farms?—The price of farm land in the East has gone down in some sections.

32,553. Could you give any indications what the reduction has been in percentage?—I could not. You can obtain the specific agricultural reports of the States, but I have not looked into that phase of the question.

32,554. You are now speaking of farms of Pennsylvania and New York?—Yes.

Farming in New England.

32,555. Going to New England, what has been the effect there?—As the Southerners say, we could not bread ourselves for a week in New England. It is not a true farm country. The agricultural product of New England on an intensive system of market gardening and dairy product. The value of the product of land in New England is greater in amount and greater in proportion than it ever was before, and, as I say, farming with brains and intelligence pays in New England. It pays some men whom I know from 6 to 8 per cent. on capital. I never trust great averages until I can verify them by individual cases, and I have lately sent out a circular of a rather peculiar kind which I knew would draw fire, to 1,500 farmers in different parts of the country, and I am getting in their replies. I did this partly in consequence of your request that I would come here. I have as yet received only 30 or 40, but they all go to sustain my position, only a little more so, both in New England and in every other State. Here they are; a lot of them came last night.

32,556. What is the general drift of them?—Shall I read you the one on top.

32,557. (*Mr. Lambert.*) Perhaps you could take the most typical?—It may astonish you. This is one. It is not typical, but exceptional. The man says that he was born in the town of Sherman, Sangamon County, Illinois, that is where Abraham Lincoln grew up under such squalid conditions as his life shows. "(*Q.*) Where were you "born? (*A.*) Near Mount Sterling, Kentucky. "(*Q.*) When? (*A.*) 23rd February 1828. (*Q.*) When "did you settle where you are? (*A.*) Was brought "here when a child. (*Q.*) How much land have you? "(*A.*) About 10,000 acres. (*Q.*) How did you become "possessor of it? (*A.*) Bought it at different times. "(*Q.*) Had you any previous experience as a farmer "when you settled on this land? (*A.*) None. "(*Q.*) Is the land saleable or has it been previously to "this year? (*A.*) It has been quite saleable. "(*Q.*) What have you to say about the rise or fall in "the value of land? (*A.*) Good corn land will "continue saleable. (*Q.*) How much money had you "when you settled there? (*A.*) None. (*Q.*) How "much did you borrow? (*A.*) 400 dollars. (*Q.*) On "what security did you borrow it? (*A.*) Mortgage on "first land bought. (*Q.*) What interest and commission did you pay? (*A.*) 10 per cent.; no "commission. (*Q.*) When did you pay your debt? "(*A.*) On or before the payments became due. (*Q.*) If "you own your land, your house, and your stock clear, "you may tell me what else you have laid up, if you "want to. I will not give you away? (*A.*) I don't owe "one dollar on my land, and am clear of incumbrance "of any kind. I owe on live stock about same amount "that I have at interest in different shapes. (*Q.*) How "many children have you? (*A.*) Five living and one "dead. (*Q.*) What do they do? (*A.*) Two daughters "are married to doctors. (*Q.*) Are they taking kindly "to the farm or not? (*A.*) Two young sons are "running large farms." Then he goes on to say he is

Mr. E. Atkinson.
26 July 1894.

worth about 800,000 dollars, and he does not think much of the depression of farming.

32,558. (*Chairman.*) You have had a great many answers of that kind, and your conclusion is that the farmers are fairly well off?—I have one here from Connecticut State, where a man says he is worth about 50,000 dols. Almost all the rest indicate substantial comfort or prosperity, varying, of course, in degree.

32,559. (*Mr. Lambert.*) Those are not typical I suppose. They are not all worth 800,000 dols.?—No; I took the first one on the top; but if you go through these as far as they go, and also some others I have, you will find, as I say, that there is no class of the community in the whole of the United States which is so thoroughly independent.

Effect of opening up of new wheat areas on farming in the United States.

32,560. (*Chairman.*) I was wanting to ask you just now what has been the effect upon farms in the Eastern States of this increased production in the Western States and of the reduced fares?—One of my neighbours at the seaside, one of the leading lawyers in Boston, inherited an old farm in New England which had been in the family 200 years. It was a very good farm. He hires a farmer, and happens to have found a first-rate man. He says it pays him 8 per cent. on the capital, and the farmer is worth 20,000 to 25,000 dols., which he has laid up.

32,561. That may be a single case, but, speaking normally, we have been generally under the impression that a great deal of land went out of cultivation in New England, or that the farms were very much reduced in value?—Those are the farms on the hills.

32,562. Did a considerable amount of land up in the hills go out of cultivation?—For the time being. Those farms were held by people who first settled, and were compelled to work and get their living as well as they could, under the most arduous conditions. Their children have gone off West, or else have come near to the railroads. I make no induction whatever from abandoned farms. Anyone who predicates disaster on such data will make a grave error. The abandonment of some of the poorer farms merely means progress in the art of farming.

32,563. You spoke just now of the increase of intensive cultivation as maintaining the aggregate production at what it was?—Yes, with an increase of aggregate product at lessening cost in New England as well as elsewhere.

32,564. I think you spoke of market garden cultivation?—Yes.

32,565. I presume from that you mean that in the neighbourhood of towns the cultivation has become much more intense, whereas in the districts remote from towns and up in the hills farms, in some cases, have proved impossible to cultivate?—Merely a few very remote ones, but the silo and the cheese factory and the butter factory, and the greater production of fertilisers is keeping up the farms.

32,566. I suppose in New England they have given up growing wheat to a large extent?—They never did it. There is hardly any wheat land in New England. We grow the best corn—I mean maize—and we still grow the yellow hard maize. We make some of the biggest crops per acre that are made in the country. We can beat the West all to pieces on the small areas of land in quality and quantity per acre.

32,567. The cultivation has become more intense in the neighbourhood of towns?—Yes.

32,568. And they have made up for the difficulties by co-operative efforts?—Yes. Then of late, since there was no more new land to be had for the asking in the West, and since the people who did settle have become desirous of better conditions, there has been a great improvement in New England agriculture. Men who had gained their experience in the West have come back and settled again on the old home farms.

32,569. Has farm land fallen in value very much in New England?—Yes, I should say it had.

32,570. How much should you say it had fallen? Could you give any average?—I could not give you any evidence of that.

32,571. But it has fallen in value?—There is one very peculiar thing about it. The good farm land in Massachusetts and Connecticut, at the same distance from Boston or New York as your county of Essex is from London, is worth more money than land in Essex. You cannot buy any really good farm land on or near a railway 50 miles from Boston, where they can produce cattle and eggs and vegetables, and so forth, for any such price as you can buy land within 40 or 50 miles of London.

Mr. E. Atkinson.
26 July 1894.

32,572. (*Mr. Lambert.*) What would be the price at which you could buy land there?—A good, well-improved New England farm would be 20*l.* an acre, but then, away from a railroad, it would be anywhere down to 10*s.*

32,573. (*Viscount Cobham.*) You are speaking of farms where you can practice dairy farming, are you not?—Yes.

32,574. You are not comparing with similar lands in Essex?—No. One of my acquaintances, who was a very large banker and mortgage dealer in the State of New York, was obliged to foreclose a very large number of farms in 1873, after the panic year, and they lay dead on his hands for a long time, until the silo came in. Then he converted them into beef factories, and they are all paying him a handsome profit, St. Lawrence County being a great grazing country.

Depression in the Western States.

32,575. (*Chairman.*) I do not know whether you have read the evidence given before this Commission by Mr. John Clay, junior, who speaks of there being considerable depression in the Western States at the present moment?—I have no doubt that there is a considerable depression at the present moment. We have had a paralysis of industry owing to the attack on our unit of value, and owing to the doubt that has been raised as to the stability of the standard.

32,576. You do not attribute any depression which exists then in any way to economic reasons?—I leave out this year from all consideration.

32,577. You do not think the immediate condition of this year, 1894, can be taken as at all a test?—It is no guide to anybody. The peculiar thing is this: that throughout this period of lowering prices we have had steadily advancing wages down to the early part of 1893.

Condition of the American farmer.

32,578. I was going to ask you about wages shortly. I wish now to confine you to the condition of the farmer. I propose to ask you some questions generally with regard to labour?—I have here these answers directly from farmers within the month as far as they go. Of course farmers are always grumbling, and many of these men are not exceptional; they are grumbling at the low prices, but the picture they show of their ability to stand low prices is quite another thing.

Financial crisis of 1893-94.

32,579. (*Mr. Chaplin.*) You wipe out 1894 I understand altogether, because of the doubt that was thrown upon the stability of the standard?—From the panic in April 1893 down to the present time, I do not think any data of any importance for permanent use can be established, except the immensity of the danger of tampering with the standard of value.

32,580. But that is not a new thing in America, is it; there has been a danger of that frequently, has there not; it is a subject that has been very often mooted for a good many years?—Yes, and there are some of the results shown on the chart I have here.

32,581. As regards this particular year you wipe out 1894 because of that reason, but what reason is there for wiping out 1894 more than previous years, when the question has been mooted and raised. (*Chairman.*) In point of fact there has been a financial crisis?—There has been a purely artificial crisis brought on by legislation. At the end of 1892 no country could possibly have been in a stronger financial position than the United States, and we had an apparent, or nearly a real, balance at the end of the year here in London of 42 millions sterling.

32,582. (*Mr. Chaplin.*) What are you now alluding to; is it the Sherman Act?—The Bland Act had long been in force, compelling the Treasury to buy 2,000,000 dollars' worth of silver bullion per month. Then came the Sherman Act increasing the purchase to 4,000,000 dollars per month. For a long time the notes issued for these purchases filled a gap in the circulation caused by the withdrawal of National Bank notes, but the danger of excess could be readily foreseen, although no exact date could be named when the danger would become apparent. When I was here in 1887 as a Commissioner of the Government to investigate the status of bimetallism, I told all your financial men not to think we should go to a single silver standard but the very reverse. I said "I told all your financial people:—We shall go to the

Mr. E. Atkinson. 26 July 1894

"ragged edge; we shall go to the point of the silver "standard, and then the country will realise the danger, "whoever is then President, or whoever is in Con- "gress, the thing will be stopped. Whenever that "time comes—that the country realises the danger—the "silver purchases will be stopped; we shall have a "very sharp monetary crisis—not a commercial, but "a monetary crisis—and a paralysis of industry."

32,583. What was the date of the stoppage—I forget?—The panic came in in April 1893, and it came exactly as it had been foretold by every economist of any note in the whole of the United States, as well as by every banker and every student whose opinion was of value.

32,584. (*Chairman.*) Was the purport of the Act to establish silver as legal tender?—The inevitable tendency of the Act was to establish silver as the sole legal tender in use.

Effect of the Sherman Act.

32,585. I forget what was the effect of the Sherman Act?—We bought four million dollars' worth of bullion, and piled it away in the Treasury; up to a certain point we coined a part of it, then we piled the rest away as bullion.

32,586. (*Mr. Chaplin.*) You issued notes against it the same as the Bank of England?—We issued notes against it.

32,587. (*Chairman.*) The effect was to increase the currency on a silver basis?—We have increased the currency of the United States by the purchase of silver and we have incurred obligations to the extent of 500 million dollars in gold; those notes are circulating, and are convertible into gold on demand, directly or indirectly; therefore the silver is so much rubbish, and might as well be sunk in the ocean. Nobody wants it.

32,588. (*Mr. Chaplin.*) What does the convertibility into gold rest on?—All our United States notes are receivable for dues and taxes. One clause of the Sherman Act is itself imperative upon the Secretary of the Treasury, namely, that he shall maintain the two metals at a parity at their present ratio. The lawful unit of value is the dollar made of gold; therefore, it is the imperative duty of the Secretary of the Treasury to maintain every note or obligation of the Government at a parity in gold at the present ratio, which is 16 to 1. When the panic came there arose a fear that this parity could not be maintained, and then President Cleveland took action to sustain our credit in a most effective way.

Repeal of Sherman Act.

32,589. (*Chairman.*) I do not want to pursue this topic very much further; I merely say that in pursuance of what you prophesied when the effect of the Act became apparent, the Legislature interfered again?—Yes, by the repeal of the Sherman Act.

32,590. And stopped it?—And stopped the panic.

32,591. When was that?—The Sherman Act was repealed in the summer of 1893.

32,592. (*Mr. Giffen.*) Was it not in August 1893 when the Act was repealed?—Yes, the panic began in April, and the Act was repealed in August. From April to August we had to invent all sorts of devices to meet temporary confusion in exchanges.

Effect of Sherman Act.

32,593. (*Chairman.*) Then the country, in your opinion, has not got over the effect of the Sherman Act yet?—No.

32,594. In your opinion, whatever depression exists at this moment is due to the effects of the Sherman Act?—Yes; and the efforts to coin silver without regard to other nations. But that is about done; that craze has gone by.

32,595. Do you think that is a sufficient explanation of any difficulty which the Western farmers may be under at this moment, quite irrespective of any economic causes due to the fall of prices, such as you have alluded to?—It must be so when you have a country stuffed with the elements of capital of every kind, and it does not move. What else can you have but paralysis?

32,596. (*Mr. Chaplin.*) To which do you attribute the difficulties of the farmers, to the passing of the Sherman Act or to the repeal of the Sherman Act?—To neither specifically. I attribute the present difficulties in the United States throughout, both with farmers and with everybody else, to the doubt of the stability of the currency induced by a long series of Acts known as the Bland Act and the Sherman Act, and the undertaking to get free coinage of silver without regard to other nations.

32,597. When you tell us that you attribute the difficulties to a long course of doubt produced by these things, what was it brought this suddenly to a crisis in 1893, and why did that long course of doubt have no effect before?—Up to that time we had borrowed a considerable amount of capital over here on a gold basis; and, of course, when there was a doubt about the stability of the gold unit of value, you began to send home a lot of stocks and bonds, and although our balance of merchandise traffic was greatly in our favour, you called upon us to pay up, and we did; but it depleted our reserves, and scared the community, and rendered the contraction of credits necessary. That you are doing now, I suppose; I should if I were over here.

Mr. E. Atkinson. 26 July 1894.

32,598. (*Chairman.*) Is the question of free coinage abandoned now in the United States?—It is not abandoned, but there is a new slang expression for it. It is a "back number": the craze for free coinage is about done. I suppose we shall have another big struggle over pure fiat money—paper. But I consider the free coinage question about settled until you move for a bimetallic treaty of legal tender. Everybody is a bimetallist in one sense.

32,599. (*Mr. Chaplin.*) In America?—Not in the sense in which you use it. I am a bimetallist or a trimetallist or quadrumetallist, but I do not believe in an Act of international legal tender which will give our debtors on our annual commerce the privilege of paying us in gold or silver, while we deprive ourselves of the choice. On our annual commerce we are the creditors of the world, and we want the best money we can get for what we have to sell, and we intend to have it in gold or its equivalent.

Bimetallism and political opinion in the United States.

32,600. Do you mean another fight when we propose it?—When you adopt it. If you should adopt bimetallism, as it is called; that is to say, if you should give up the single standard and adopt a bimetallic treaty of legal tender, then there will be a considerable fight on that issue on the other side; but until that time there will not be much of a contest.

32,601. Is it the case or not that both political parties in America rather favour the adoption of international bimetallism?—The mass of the people do not.

32,602. But as a matter of fact the political parties, are they not practically agreed upon that?—There is a good deal of playing politics on that question, *i.e.*, what we call playing politics.

32,603. You cannot answer the question?—I cannot answer the question.

32,604. You cannot say they are not?—I cannot say that the two political parties are not playing politics on what you call bimetallism, but that does not mean very much. Neither party will dare to debase the currency or to impair the present standard of value when the responsibility comes upon them.

32,605. (*Chairman.*) I think what has been done lately is that your country is abandoning the effort to adopt bimetallism itself and has reverted practically to a gold standard?—We have silver which has cost us an additional debt, 500,000,000 dollars piled away in the Treasury, and we think that is enough. We shall pay all notes and other obligations of the United States Government in gold, and what we shall do with that silver the Lord only knows.

Gold standard in the United States.

32,606. For the moment you have gone back practically to a gold standard?—We never left it since 1879, and never shall. We are the creditors of the world on the necessaries of life to an enormous extent. Whatever may be our small debt for capital borrowed in order to produce those necessaries of life yet on our annual commerce, we supply the food that you must have, and the cotton that you must have, and the oil that you must have; and so forth, and we can forego any import that we have a mind to. Consequently this year, when we have been foregoing imports on account of our tariff agitation, we have got a merchandise balance against the world of about 50,000,000 sterling, and an actual balance very near that point; a little less because there are some little elements of freight and so forth to be considered.

32,607. (*Mr. Everett.*) Which on an average is greatest, the value of your imports or the value of your exports?—Our exports are much the largest.

32,608. Is that a sign of a creditor nation?—It is a sign that we are creditors to you on a gold standard.

Mr. E. Atkinson. July 1894.

We have sold you and others 250 million dollars' worth more of goods than we have bought of you in goods and we therefore have that amount at our credit to draw upon either for the payment of our debts for capital borrowed or for the import of gold whenever we want it.

32,609. (*Mr. Giffen.*) It may be used for the payment of debts?—It is now taken for the payment of debts, but I do not think you have a great many more bonds or obligations to send over from here; I should not think you have.

ll in ices cotton d other mmo- ties.

32,610. (*Chairman.*) So far as your evidence has gone, your illustrations of the lower prices have been mainly drawn from the price of wheat?—Yes.

32,611. Have the same circumstances tended to produce a fall in the price of other commodities, especially of cotton, petroleum, and other exports of your country?—Yes.

32,612. Has there been a very large increase in the production of cotton during the last 20 years?—"Cheap cotton by free labour" has been justified notwithstanding the derision with which it was first received. The maximum ante-war crop, before slavery was abolished, was 4½ million bales, and now only an average crop is eight millions. There has been there the greatest economic change that ever affected a product of agriculture. Free labour is cheaper than slave labour. The great plantation is played out as a rule. The crop is the cash crop of the small farmer and the small grower, and it comes in from all quarters. Then we have now better tools. You could not trust a slave with anything but a nigger hoe, now they are using improved tools, cotton planters, and even in Texas a cotton picker, impossible as it seems. Then, too, they formerly wasted all the seed, and at the Atlanta Exhibition in 1880, of which I was the chief promoter, I told them that if we had had a cotton plant in the North producing seeds alone without lint, it would long before have been one of our most valuable crops. To-day the product of cotton seed oil is worth 30 million dollars, it was then less than a tenth of that sum and most of the seed was wasted.

32,613. Then may we take it that the same things which in your opinion have accounted for the decrease in the price of wheat have also affected the price of cotton, that is to say, the improved methods, the better condition of the labourers, and the small farmers in the Southern States, and the lower freights by railway and by sea?—Cotton farmers are more prosperous than they ever were before. They fortunately perhaps for themselves had rather a short crop two years before the panic, and could not get trusted very much; so they came into the panic on a cash basis, and it did not hurt the South so much as it did the North. They were better off than the North. I have the facts all here in these tables.

32,614. Then take the case of petroleum, which is another very large export of your country?—The way in which the Standard Oil Company has held its control of petroleum is by selling it constantly at lower and lower prices, and making more money out of it. Light is the cheapest factor in life that there is now, and the promoters of the Standard Oil Company have made immense fortunes out of it, they are making them still by improvements in their processes, and by lessening both cost and price.

32,615. By a continued reduction in price?—Yes, and there are vast improvements now pending.

32,616. Would you say that the lower price in petroleum has been due simply to the increased production?—To improvements in invention and in the applications of science.

Condition of labourers in United States.

32,617. Now, you have told us the condition of the farmers; what has been the condition of labourers as resulting from these lower prices?—Wages have constantly advanced, of course, subject to a little temporary fluctuation such as is occurring at the present time in respect to a very few branches of industry. If you date from 1860 you will see that the common labourer is getting absolutely higher wages. This runs on from an improvement, say of 50 per cent., on common labour to an improvement on the part of the skilled labourer of 75 or 80 per cent.

32,618. In money?—Either in money or in purchasing power.

Course of wages since 1850.

32,619. I should like now, in the first place, to take it in actual money. What has occurred in your country in the case of the money wages apart from what they can get for the money?—In the monumental volumes of the statistics of prices and wages which I had sent to you, and which were compiled under the order of the Senate by Commissioner Wright, all wages are given averaged and in particular. I have a table here showing the results. The change in the rate of wages is indicated by the green line. (*See Appendix.*) I have taken 1870 as a unit at one hundred. 1870 was the point on the whole of the highest gold prices, 1865 being the point of the highest paper prices in the United States. From 1850 the line of wages runs on the green nearly uniformly to 1860; then there is a little rise to 1865, when there was a sudden advance of paper wages in the War period; then there was a continuous advance to 1870, when the financial debauch had nearly culminated. Then came a long struggle to get back to specie payment, and from 1870 to 1880 wages declined a little; then they again began to advance.

Mr. E. Atkinson. 26 July 1894.

32,620. Apparently the money wages during that great rise were estimated in paper?—Yes.

32,621. Then you reverted to a gold standard?—Yes.

Course of wages and prices compared.

32,622. But one would have supposed that there would be a considerable fall in the money rate of wages due to the reversion to the gold standard?—The fall in wages was only during the period of the struggle to get back to a specie standard. After the specie standard was once established wages again began to advance, while prices continued to go down; therefore, wages are to-day, or were in 1890, within less than a fraction of one per cent. as high in gold as they were in paper in 1870. Now prices were affected much more, as they always are by the depreciation of the currency. This diagram shows the curve of prices in red. The prices of 212 commodities averaged according to their relative importance by Professor Falconer for the Senate Committee is the curve that I have chosen. If I had taken an average of all prices without regard to relative importance the change in prices would have been more conspicuous than it is here. But taking the prices of 212 articles on the average, according to their relative importance, the prices rise a little between 1850 and 1855. Then there is a slight fall to 1860. Then comes the inflation of the war, and up they jump to that high point—160·8 per cent. as compared to the unit of 100 in 1870. Much lower in 1850 and 1860 than in 1870.

32,623. That was prices in paper, and not in gold?—In paper, 1861 to 1879. That is the best example of the effect of impairing the standard of value that could possibly be given, because we had an advance in prices due to the war demand and due to all the abnormal conditions of that period. But wages did not advance in any proportion equal to prices; presently, when I come to the line of purchasing power, you will see that. The prices in 1865 were 160·8 per cent. Then the war ended, and down we went to 100 in 1870. How we ever got down without universal bankruptcy I do not know; I had some hard steering to do in the factories that I was in charge of, I know. Then the prices continued to go down till 1875, 1880, and 1885, and also lessened very slightly between 1885 and 1890.

32,624. In the later years that was in gold?—Yes. After January 1, 1879. In 1893 we come to fluctuations due to the impairment of the standard of value. From 1885 to 1892 inclusive the prices have been fairly stationary; there has not been much variation since then until 1893, except what would be due to seasons.

32,625. Then would you say that from 1885 to the present time, 1894, the last eight or nine years, prices have been very stable?—There has been very considerable stability until April 1893. I have established a multiple standard which I make a great use of. I ascertained what were the average quantities of the specific kinds of food required in a workman's family in New England at a cost of 1s. or 25 cents. a day. I then took those exact quantities of meat, flour, and so forth (I have got it all here), and adopted that as the food standard, which is half the cost of living. Then I took the average unit of the materials for clothing, cotton and woollen cloth, according to the average consumption, and then I took the average fuel and the average light, in all constituting about 70 per cent. of the total cost of living. Now using that multiple standard as a factor in the same way that the averages are used here, I got the same results. This purple line shows the purchasing power of wages from 1850 to 1892 inclusive.

32,626. Before we go to that I want to ask you one or two more questions upon the actual money prices?—

Mr. E. Atkinson. 26 July 1894.

I know what you are at. Taking the multiple standard in 1885, it was 30 cents a day, and in 1891 it was 29 cents a day, and between the two dates it did not vary much. I suppose to-day it is down to 28 or 27 cents, tested entirely under normal conditions.

32,627. Your diagram shows that from the date when the gold standard was reverted to prices have been continually going down?—And wages have been continually going up.

32,628. Wages not immediately after, but within a few years began to rise and to move inversely as the prices went down?—Yes.

32,629. Since 1885 prices have been very stable, but apparently wages have continued to rise somewhat?—They have continued to advance until the panic, 1893.

32,630. But not at any great rate?—No.

32,631. Your figures apparently do not go further than 1890?—No.

32,632. Is that the date of these inquiries that you have spoken of?—Yes; this is wholly an official table; in my private table I come down to 1892.

32,633. What is the result of that?—Substantially the same results are shown; 1891-92 was the most prosperous year for the workman in the United States that was ever known, and by workmen I mean 90 per cent. of all who are occupied for gain.

32,634. Between 1890 and 1892 were the prices maintained at about the same level, or did they fall further?—They did not vary 5 per cent.; they varied incidentally but not collectively.

32,635. But wages went up?—Wages went up.

32,636. When you spoke a little while ago of the fall in the price of wheat, that must be taken to have been exceptional, and especially with reference to wheat; the average of prices has been in your opinion since 1885 very stable?—Very stable.

32,637. Even accounting for wheat?—Yes, until the huge crop of 1891 marketed in 1892.

32,638. Notwithstanding that wheat has fallen considerably since that period, yet, even taking that into account, the average of prices has been very stable?—Yes. Wheat is only a pound of bread a day you know, and that does not count for much in a multiple standard.

32,639. We are speaking of the actual average of all articles?—The actual average of the necessaries of life in the proportion of their consumption has varied between 1885 and 1892 from 30 cents to possibly 28 cents.

32,640. Then this average is made up in proportion to the consumption?—Yes.

32,641. Wheat would not be a very important factor in that?—Not a very important factor.

32,642. You have made the average for the purpose of comparing it with the money rate of wages?—Of course when your monetary unit is jumping about, and nobody knows what it is, you must work on some other standard.

32,643. Do these lines on the diagram show the average of all labour?—Of all; this is official.

Condition of agricultural labourers.

32,644. Can you say what has been the effect upon agricultural labour?—Agricultural labour is higher than it ever was before, and even during the period of lack of employment, agricultural labourers were very much in demand; there has been no lack of employment for agricultural labour.

32,645. (*Mr. Giffen.*) Is that so now?—Yes, there is no unemployed agricultural labour. The unemployed are unwilling or incapable as to farm labour.

Suspension of special payments, 1861-79.

32,646. (*Mr. Lambert.*) What is your paper currency based on; what is the paper to be repayable in?—It was nominally repayable in gold, but during the suspension of specie payments, from 1861 to 1879, it took its rating in gold according to the confidence of the community that it would ultimately be paid.

32,647. I see. Ultimately it was to be paid in gold?—In 1865 it was subject to a depreciation of about 60 per cent. In 1879 it was redeemable in gold.

32,648. Then do we understand there was more paper issued than there was gold to balance it?—There was more paper issued than there was confidence to balance it. There was no gold in the country at that time; it was all gone from 1861 to about 1876.

32,649. (*Mr. Everett.*) Was not silver legal tender at that time?—No; the silver dollar was legal tender from 1865 to 1873; but it never was issued——

Mr. E. Atkinson 26 July 189

32,650. It was legal tender without limit, and the Mint was freely open to coin all you pleased to take there?—Yes, but up to 1873, the moment a silver dollar was coined the broker took it up because he could send it to France and sell it for 102½ cents.

Purchasing power of wages.

32,651. (*Chairman.*) Will you now explain the purple line dealing with the purchasing power?—Yes, the purchasing power is the important point. The population of the United States rests upon agriculture; 44 per cent. are either farmers or farm labourers—probably 50 per cent., because a good many men who listed themselves as labourers were doubtless farm labourers. But if you add to the 44 per cent. those who are occupied in the flour mills and at the meat-packing establishments, and so forth, you will see that one-half of the occupation of the people of the United States rests directly upon agriculture. Then one-half the freight and more of all the railroads rests on agriculture; and so on. Then you come to from 10 to 11 per cent. in trade and transportation; about 20 to 22 per cent. in professional and personal service; and about 22 to 24 per cent. in manufacturing and mechanic arts. Those are averages all over the country. Now 90 per cent. of those people depend either upon wages or salaries or small earnings. There are not over 10 per cent. of prosperous people who can afford to lie back on their capital in any country, not even in the United States. 90 per cent. are in a sense dependent upon their daily earnings for their daily bread, with a small saving for hard times when they get old. Therefore, this factor, the purchasing power of wages, affects the great body of the community; and the capitalist, as he ought to, bears the brunt of the fluctuation. Now, coming to the purchasing power on the average of all wages, you will see that it fell from 1850 to 1855. In 1865, when wages went up, and prices went up also, the purchasing power went down. Then came the struggle for a return to specie payment.

32,652. The inflation of prices therefore, due to the paper money, caused the prices of the articles of consumption to rise and the money wages did not rise in the same proportion, and the labourer bore the whole burden?—The labourer bore the whole burden.

32,653. (*Mr. Lambert.*) Money wages fell, I understand?—The purchasing power of wages fell, but money wages rose a little, and the men who had the most confidence were cheated the most, just as it was with the currency in the revolutionary war, when the debtor chased the creditor all over the country in order to make him a legal tender.

32,654. (*Chairman.*) Which was another way of taxing the labourers for the purpose of carrying on the war?—Our legal tender Act of 1861 was a war measure for the purpose of collecting a forced loan, on that ground it may be justified. As a rule, in all history, legal tender Acts, born in fraud and nourished in corruption, have cheated everybody who have been forced to take a legal tender coin, which is not worth as much after it is melted as it is in coin. I want to get rid of the idea of legal tender. Now the purchasing power rose in 1870 to 100, and continued to rise to 152·7 per cent., in 1890 when prices went to 64·9 per cent. and wages to 99·1 per cent. Now, under the law of progress, the workmen, the working force who constitute 90 per cent. of the community, have in recent years been securing to their own use and enjoyment an increasing share of a constantly increasing product—that is as it ought to be—because during that period, in my own experience as a borrower for many years, interest on capital has gone down from a safe 8 per cent. in 1850 to a safe 4 per cent. at the present time. We never were accumulating capital so fast in the United States as we have been doing during the last five years. I have the figures here to prove it. I do not trust the figures of property. I trust the figures of insurance. The insurance against losses by fire in 1865 came to about 3,000,000,000: now it is 26,000,000,000 dollars; people do not insure property unless it is liable to be burnt up, and these figures show fairly well the increase of capital.

32,655. Your explanation of that diagram, as I understand it, is that the great cheapening of the cost of production, and the cheapening due to inventions, and to lower freights, and so forth, which have all resulted

Mr. E. Atkinson.

6 July 1894.

from inventions of various kinds, have improved the condition of the labourers?—Naturally.

32,656. Because the money wages have increased, and the purchasing power has increased relatively still more?—Naturally.

32,657. Prices have gone down, and the purchasing power has increased considerably, and the result has been therefore, that the labourer has obtained a larger share in the production than he formerly had?—That is the rule laid down years ago by Carey and Bastiat—"that in proportion to the increase of capital the share "falling to the capitalist is augmented absolutely but "diminished relatively, while the share falling to the "workman has increased both absolutely and relatively."

Proportion of labourers to population.

32,658. I think you said that the labourers formed 90 per cent. at least of the population?—Yes, in point of number.

Effects of improvements in production and transport on prices and wages.

32,659. These inventions and this increased production have been really for their benefit?—Yes. Here, for instance, I have the net registered tonnage through the St. Mary's Falls Canal, which is one of the elements in the reduction of price. The St. Mary's Falls Canal unites the great lakes. In 1873 the traffic was 1,200,000 tons, and in 1892 it was 10,647,000 tons, beating the Suez Canal by 25 per cent. Then, to take another table, in 1873 the production of pig-iron amounted to 2,868,000 tons; in 1892 it was 10,255,000 tons; in 1873 we made 222,000 tons of steel, and in 1892 we made a little short of five millions; those are not signs of depression. Then I have here the freight charge on the New York Central Road. Now the New York Central Road is a great wheat road. In 1865 the charge per ton per mile on the New York Central Road was three thirty-one one-hundredths cents per ton per mile.

32,660. (*Mr. Giffen.*) That was the paper price; was it not?—Yes. Then in 1892 it was seven-tenths of a cent per ton per mile. Here is a curious computation, if the New York Central Railroad could have charged during the last three years the same charge that it made from 1865 to 1869, it would have earned on its increased traffic 190,000,000 dollars more than it did, and the entire stock and bonds of the corporation are only 150,000,000 dollars. The reduction in the freight charge over the New York Central Railroad in the three years last past as compared with so recent a period as just before 1870 has benefited the community as a whole more than the entire stock involved; yet ignorant people denounce the New York Central Railroad and grudge the income that capital secures from it—but that is superficial, of no permanent importance.

32,661. (*Mr. Everett.*) Is that railroad mostly owned in America or is it owned by people outside of the country?—You own a good deal here I suppose. That is one of the Vanderbilt roads. It is pretty safe to pay up to 4 per cent., but it may not pay any more. I think all our railways must come down to an earning power of 4 or 5 per cent. on what they would now cost to construct.

32,662. (*Chairman.*) I think I may take it as the result of the evidence you have given so far, that you consider the cost of production has been so far reduced by science and invention as to make low prices and high wages the true complements of each other?—That is my conclusion. I have investigated a great many different specific articles, not only wheat but cotton, cotton fabrics, furniture, hardware, locomotive engines, and so on. For instance, I have here a table of the Baldwin Locomotive Works in Philadelphia. A typical engine of a certain size was sold by that establishment in 1865 for 24,000 dollars in paper; that same engine is now sold for 7,500 dollars in gold with a profit, and the workmen are earning more or as much in gold as they did in paper. I have investigated many arts, some affected by tariff and others entirely independent, and the rule is the same.

32,663. By high wages you mean not merely the money wages, but also the purchasing power, do you not?—Yes.

32,664. But you have shown us that money wages have increased and that the purchasing power has increased still more?—Yes.

32,665. I presume you would consider that if the low prices were due to the appreciation of gold, wages would have fallen in the same degree as other articles?—In the same general degree. There has been no uniform fall in prices; there has been a variable tendency to lower prices, but some articles have risen.

Mr. E. Atkinson.

26 July 1894.

32,666. But the main articles of consumption, the raw articles of manufacture, have all fallen in price, or nearly all?—Yes, so far as the principal articles of necessary consumption are concerned, they are articles that are moved on the average a long distance over railways in the United States, and very nearly the entire reduction in money price can be explained by the reduction in the railway charge alone without going any further.

Prices and the appreciation of gold.

32,667. Then may I also take it as your conclusion that the depreciation of prices is not due to the appreciation of gold, but to these various inventions that you have spoken of?—I even think that gold itself has depreciated since 1850. Uncle Sam as a concrete individual can produce nearly twice as much to-day in less hours of labour than he could in 1850, and there ought to have been a reduction of 50 per cent. on that ground in prices as compared with 1850.

32,668. (*Mr. Giffen.*) You mean a rise of price, but you said depreciation of gold?—I am speaking now of evidence of what I consider a depreciation of gold, viz., given a certain amount of human energy applied to production in 1850—which would stand for a quantity of commodities represented by 100—a less amount of human energy applied to production at the present time stands for a quantity of commodities represented by 200, yet prices are about on the level of 1845 to 1850.

32,669. (*Mr. Chaplin.*) That is as compared with 1850?—Yes.

32,670. Do you say that since 1873 there has been no appreciation of gold?—Will you allow me to complete my statement before I answer that question.

32,671. Certainly, if you wish it?—I reason that if there had not been a depreciation of gold, prices would now be very much lower than in 1850; whereas, by any of the index numbers that you may choose, they were barely down to the standard of 1845-50 in 1892.

32,672. (*Mr. Giffen.*) What do you mean by the depreciation of gold in that sense?—I mean that gold has become so abundant that it has not only displaced silver as part of the bank reserves, but that it has actually lost part of its purchasing power as compared with 1850.

32,673. I do not quite understand the statement that gold has lost its purchasing power, because, if prices have fallen, its purchasing power has increased?—I mean to say that the prices have not fallen as much as the improvements of science and invention would have warranted you in expecting.

32,674. (*Chairman.*) Looking to the great improvements in cultivation and production, and to the inventions which have tended to lower the freight on goods, you would have supposed that prices would have fallen still more?—We might have expected that.

32,675. (*Mr. Chaplin.*) As compared still with 1850?—Yes.

32,676. (*Chairman.*) Comparing the present time with 1873, from which time these improvements mainly have taken place, do you consider that there is sufficient to account for the lower prices of articles of all kinds, without assuming that any portion of that low price is due to the appreciation of gold?—I have not yet been able to find an article of any conspicuous importance in which I could not directly identify improvements either in production or in distribution which would account for the reduction in price, without paying any regard to the alleged change in the ratio of gold and silver.

Appreciation of gold since 1873.

32,677. (*Mr. Chaplin.*) Are we to understand from the last answer that you are of opinion that there has been no appreciation of gold since 1873?—I can only answer that by taking this ground, that if you mean by that question whether or not gold will buy more commodities than it would in 1873, I answer, it will of most things; it will not buy as much coffee; it will buy but very little more meat; it will buy very little more dairy product in the United States; it will buy a good deal more grain; and it will buy a great deal more clothing.

32,678. (*Viscount Cobham.*) But it will buy less labour?—It will buy less labour—in other words, the workman can get more gold than he ever could before. Therefore it seems to me, dealing abstractly with the question, that there has been no appreciation of gold. I think that if there had been it would have found its

expression in a general and uniform reduction both of the prices of products and the wages of labour.

32,679. (*Mr. Giffen.*) You quite agree that the purchasing power of gold has increased?—Yes, in respect to goods—but the producer or employer cannot buy as much labour as he could in 1850.

32,680. Then if people use the phrase "appreciation of gold" as the equivalent of the increased purchasing power of gold, they are quite accurate in using that phrase?—Then they are quite accurate, but that use of of the phrase, to my mind, lacks definition.

32,681. Is that not the sense in which it was always used by economists prior to the discussions which we have had of late years?—Unquestionably.

32,682. Did not Adam Smith use it in that sense?—Unquestionably; and you have used it in that sense, and quite correctly.

Gold standard v. bimetallism.

32,683. (*Chairman.*) Then I presume I may take it that you are in favour of a single metallic standard, namely, that of gold?—I think a metallic standard on a gold basis forces itself in spite of all legislation; it is the only safety. I think even if there should be an international treaty of legal tender, that we should immediately contract ourselves out of it in the United States and draw all our drafts for so many grains or pennyweights of gold—that is, if you pervert the name of "pound sterling" from being a mere definition of 113 grains of gold. We would drop the use of the term pound sterling as a synonym for 113 grains of gold, and we would make our drafts for a given weight in terms of 100 grains or some other specific form which no act of legal tender could vitiate.

32,684. (*Mr. Chaplin.*) Who does "We" represent?—I am referring to the English as "You," and the Americans as "We." I mean to say if you allow the pound sterling to lose its abstract definition of 113 grains of gold we would cease to deal with you in pounds sterling, and we would draw our drafts for all our produce for 100 grains of gold or its equivalent.

32,685. (*Chairman.*) In other words, the gold standard would re-assert itself even if particular countries by their legislation were to endeavour to alter their own standard?—That is my judgment.

32,686. It is so convenient, I presume?—There is no malignant influence of legal tender in international commerce. You have aggregated to yourselves the banking of the world by a standard which is not variable; that is to say, all international commerce is adjusted to the pound sterling or to 113 grains of gold; and if that definition were lost, another one would be set up, and we should put our traffic on the new one without regard to the treaty.

32,687. In other words, the commerce of the world would arrange itself to some agreed-upon standard, irrespective of the legislation of any particular country?—The commerce of the world will not adjust itself to a privileged class of debtors who, by acts of legal tender, may be permitted to offer an alternate of gold or silver of which choice the creditor is deprived. We, being creditors to a very large extent, will immediately adopt some other standard than the pound sterling if that event should come. Then, as all our prices are adjusted to what we can export, we should of course remain on a gold basis, no matter what other people did. What idiots we should be to run the risk of any other standard.

32,688. Have you read Mr. Foxwell's evidence before this Commission?—I have glanced over it. I agreed with him on one point—that I am not an economist in the sense of being an abstract thinker. I deal in the observation of facts and I distrust abstract political economy; that is about the only point on which I did agree with him.

32,689. You do not profess, yourself, to be an economist in his sense?—No.

32,690. That is to say, a theorist?—Distinctly not—not an economist of the hypothetical or *à priori* type.

32,691. You take your stand upon facts?—Professor Foxwell and some of his associates indulge in hypothesis without much regard for facts. That is a kind of political economy that I do not take much stock in. I have often observed that academic economists who employ the deductive, hypothetical, or *à priori* method become very dogmatic, and when neither the facts of the present nor the economic or commercial history of the past sustain their opinions, they are very apt to charge those who differ with them with errors or "blunders in political economy." This is what has brought economic science somewhat into disrepute.

Mr. E. Atkinson.
26 July 1894.

32,692. You will observe from Mr. Foxwell's evidence that he considers low prices are due to the appreciation of gold?—Yes.

Effect of appreciation of gold.

32,693. And he considers that the appreciation of gold would necessarily lead to misfortunes of all kinds, to the injury of the working classes, to lesser production, and to reducing the condition of the labouring people; do you consider there are any facts which tend to bear out his theories?—I find that in the face of that, every productive industry in the United States has increased enormously and wages have risen. If that is disastrous I should like to continue on the same lines.

32,694. (*Mr. Chaplin.*) Every industry what——? I did not quite follow?—Every important branch of industry in the United States has increased entirely out of proportion to the increase in the population.

32,695. (*Chairman.*) I presume, therefore, you will say he is a theorist who has not compared results with his theory?—I observed that when you put questions to him about the effect on labour he did not seem to know much about it.

Views of American economists on bi-metallism.

32,696. What are the general views of the most distinguished economists in America and in the United States upon the subject?—Are you speaking now of what is commonly called bimetallism, which I prefer to designate as bi-legal tenderism? We have two rather conspicuous men of repute in the science of political economy—President Walker, of the Institute of Technology, and President Andrews, of Brown University, who accept it, but they have very little support. Most of the Harvard men are entirely the other way—President Eliott and John Fiske the historian, Professors Dunbar, Taussig, and McVane. At Yale you have against them very marked men of very marked ability—Sumner, Hadley, and Farnum. Outside of the professional economists you have Horace White, the managing editor of the *Evening Post*, whom I hold in higher repute almost than anybody, but who is seldom heard of by name because he is an impersonal editor. You have Carl Schurz, you have Hugh McCulloch, you have Seligmann and Richmond Smith of Columbia, Abraham S. Hewitt, David A. Wells, and others. As I have stated in my brief, we have a little economy club, and although I am not an economist, they permit me to be a member. It consists of about 40 people—men who are assumed to have done something in the progress of monetary and economic science. I lately sent round a privately printed inquiry to them in the form of a pamphlet, to see how much support Presidents Walker and Andrews had, and I did not find but two out of the 40. They did not all answer, but they wanted to know why I would persist in putting our friends Walker and Andrews into a corner by putting questions to them which they could not answer. I have a copy of that little missive here, if you care to have it.

32,697. (*Mr. Chaplin.*) What was the missive you sent round?—I privately printed a pamphlet in which I described myself as the missing link between the professed economists and the business public, and I desired to get the definite answers to some of the questions such as have been put to me to-day. But I could not get them from the so-called bimetallists.

32,698. (*Chairman.*) I put the question to you because Professor Foxwell appeared to be under the impression that the weight of authority of economists in the United States was in favour of bimetallism?—I differ with him wholly.

32,699. In your opinion the weight is very strongly the other way?—The weight is very strongly the other way of those who are held in repute as professional masters of economic science; among bankers and business men there is very little support for an alternate legal tender.

32,700. (*Mr. Chaplin.*) May I ask if you would tell us the name of the pamphlet—was it this: "Some "Suggestions on Methods of Investigation in Monetary "Science"?—Yes, that is it.

Condition of farmers in purely wheat growing States.

32,701. (*Viscount Cobham.*) Can you give us some information as to the state of farmers in the purely wheat-growing countries of the States?—Purely wheat-growing is about done.

32,702. What States do you consider come under that definition?—The land occupied in North Dakota is still

Mr. E. Atkinson. 26 July 1894.

to a considerable extent devoted to all wheat, and the farmers are not prospering so much as others, but in South Dakota and in Minnesota, in Michigan, in Iowa, in Nebraska mixed farming taking the place of sole wheat is prospering.

32,703. Then the all-wheat industry is really confined to a very small surface of the States?—To a small and lessening portion. This new country in Texas is for the moment an all-wheat section, but it is a very fine region for fruit, and will be a great grape-growing country as well.

32,704. Are the farmers who produce nothing but wheat in Texas doing well?—They began five years ago, and as they are turning out nine or ten million bushels, I suppose they must be making money out of it, or they would not be increasing the product so rapidly.

32,705. Is that prosperity owing to the special adaptability of the soil for wheat-growing there?—Yes.

32,706. Do you agree with the evidence we have had here that in the purely wheat-growing districts there is depression and almost an abandonment of the industry?—Not an abandonment of the industry where they can add something to the wheat——

32,707. In Northern Dakota?—In Northern Dakota, where it is rather cold, they are going into stock-raising to some extent. I think you would really get a better answer to that question if I were to read to you a report from the Commissioner of Labour of the State of Minnesota; it is not very long.

32,708. We have heard that in Minnesota there is as much depression as in the Dakotas?—I think that is entirely erroneous. If you desire to know what quality of man this man is, Major Craigie can tell you. He met him at the meeting of the International Statistical Society at Chicago, and he is a man upon whom I think implicit reliance may be placed. It will not take me long to read this, if you desire. I think this will be the most complete answer I can give you; it concurs with my own investigations in every other direction.

Farm mortgages in Minnesota.

32,709. Then read it, if you please?—This relates especially to mortgages: "With this I send you a copy "of my last report, giving in detail many of the facts "requested about farm mortgages. The subject of "farm mortgages is treated in that report from pages "355 to 419. The two maps show the general changes "of ten years. In the detailed statistics of Mower "county for over 20 years you will note what I call "the old normal of mortgage foreclosure, the fore-"closure that years ago went with wheat-farming. In "those for Polk county you will find repeated the same "story for the present, with this exception—Polk, "Marshall, and the other counties in the black belt of "1891 are not uniformly as fertile as Mower and the "counties in the black belt of 10 years earlier. The "good wheat lands of the Red River valley are about "the same as those of Southern Minnesota. The very "heavy foreclosures in the wheat region comes in "townships where the soil is light. *See* map of Polk "county. For the changes in the State by sections for "10 years, and also the details of the changes in fore-"closures as related to changes in wheat-raising and "mixed husbandry, *see* pages 370-372." "Of statistics "for 1892 and 1893 we have progressed far enough to "indicate the following facts. For the State as a whole "there will be a marked decrease in foreclosures on "legitimate farm property. This is true in general "of all parts of the State. All of those black on the "map of 1891 will, with few exceptions, show an im-"provement in the two later years. Of those showing "a foreclosure ratio less than one in 100 of assessed "land in 1891, there will be no very marked change. "Of the good counties like Freeborn, which showed a "much higher ratio, those in the old settled counties "will record a decrease quite marked. I here refer "to counties with a ratio of from 200 to 300 acres of "assessed land to one acre foreclosed. Thus Blue "Earth, with a magnificent record in 1891, makes "about the same showing in 1892 and 1893, while "Freeborn reduces its farm foreclosures from 18,824 "dollars in 1891, to 2,258 dollars in 1892, and thus far "two foreclosures in 1893 amounting to 4,718 dollars. "I have calculated the per-centage of mortgage debt "in force foreclosed in groups 1 and 4, which are men-"tioned on page 370 of the report." I ought not to have attempted to read this. This is not the one I refer to. He concludes: "The figures of mortgage fore-"closures for the present are, as shown before, 80 per "cent. better than 10 years ago."

Mr. E. Atkinson. 26 July 1894.

32,710. (*Mr. Chaplin.*) That is this year, is it?—That is this year, 1894. "The newer counties are thus, even "with their greater burden of debt and foreclosure, "better off than the most favoured portion of the State "10 years ago."

32,711. (*Viscount Cobham.*) What is the effect of foreclosure upon a farm as a rule?—Sometimes the farmer goes on——

32,712. The farm, not the farmer; is the farm generally abandoned in such a case?—No. It is generally apt to be the case that the man who first owned it had not the necessary aptitude, and the mortgage companies, down to a very recent period, on true farms generally made a profit on their foreclosures. With true farms they held until somebody else came along who knew how to run the farm. Then they resold it to him, and down to within a year or two almost all the true farm mortgage companies had made a profit on their foreclosures.

32,713. You are speaking of lands where mixed cultivation is possible, are you not?—Yes.

Wheat growing in the north-west.

32,714. But where it is not possible a good deal of land is going out of cultivation?—Here is what I wanted to read you: "The exclusive wheat-farmer of "the north-west has no work to perform for more "than from two to three months a year. He is "absolutely idle for from nine to ten months. "Diversified farming employs the farmer 12 months "a year. The latter farmer can and will raise wheat "with profit at prices which will drive the single-crop "farmer to the wall. This fact has led to diversified "farming and prosperity in Southern Minnesota and "Iowa, and it will lead—is rapidly leading—to this "change in Northern Minnesota and the Dakotas. "Wheat can and will be raised at continually decreas-"ing prices in the north-west, and with increasing "profit, and the British farmer might as well know it "first as last." That is written by one of the best judges I know in the whole States.

32,715. (*Mr. Chaplin.*) That will be in conjunction with various farming, I understand?—That is with various farming.

32,716. Under those circumstances the wheat will be raised at a profit, even at lessened prices?—Even with lessening prices. One of the letters I have just read is dated 1893. I have other similar letters from Nebraska. Here is a letter from the Bureau of Industrial Statistics of Lincoln, Nebraska. "The single-crop "system will be a thing of the past; they are going "into diversified farming."

32,717. (*Viscount Cobham.*) Is the land which is susceptible only of the single-crop system of an insignificant amount?—Merely in the very coldest part, and even there they can raise stock, as they do in Manitoba.

Effect of discovery of Florida phosphates on American agriculture.

32,718-19. Have all wheat farmers been more affected by the fall in prices or by the exhaustion of the land?—Not much by the exhaustion of the land in those great prairies. I want to call your attention to one of the most important factors in our agriculture, and that is the discovery of unlimited deposits of phosphates. Phosphoric acid and phosphate of lime for all time are assured by the discovery of the Florida phosphates, which can be produced at three dollars a ton at the mines.

32,720. Are they being brought into the prairies?—They are carried all over the country.

Nitrification of the soil by the pea vine.

32,721. And applied to wheat-growing land?—Yes. Then there is another development which I regard as a most notable factor, not so much in the extreme north as in the middle section and in the south. That is the function of the leguminous plants in attracting bacteria from the atmosphere, who dissociate the nitrogen and renovate the soil. They are now inoculating the soil with the right kind of bacteria to assure the growth of pea and bean vines which will renovate the soil.

32,722. Do you mean fresh virgin soils, or soils which have been previously used?—Soils of the south especially. As Governor Wise of Virginia put it, under the old system "the niggers skinned the land, and the white man skinned the niggers"; and they have blasted a great deal of the southern soil by skinning it. Now the new farming of the south is known as pea-vine farming. These farmers take up these exhausted lands which the old planters have left, whose sons

Mr. E. Atkinson. 26 July 1894.

have either gone west or have gone to a better place, and renovate the land with leguminous plants, which the latest discoveries in Germany and in America indicate as deriving their nitrogen from the atmosphere by way of the myriads of microbes.

32,723. (*Mr. Channing.*) Is this being done experimentally under the Agricultural Department?—This is being done experimentally under the Agricultural Department, and practically for years throughout the south without their knowing the science of it. The pea-vine farmer is a well-known man, and he renovates his soil in this way.

32,724. (*Mr. Lambert.*) Does he sow the pea-vine?—He sows the pea-vine.

32,725. (*Mr. Everett.*) Do you mean ordinary peas?—There are 300 varieties of them, more or less. There is the cow pea-vine; the pea-nut is one variety; buckwheat is one, the alfalfa is another, and clover is another. These are all legumes. The latest investigation shows that between the stalk and the root there are little appendages, and in those little appendages dwell the bacteria; living and dying within that class of plants they dissociate the atmosphere, and convert the nitrogen to the plant's use. Then you turn the plant under, and you have renovated your soil. That is going on all over the south.

Florida phosphates.

32,726. (*Mr. Lambert.*) Would it not be cheaper to renovate their soil by the Florida phosphates at 3 dollars a ton?—The Florida phosphates do not give one element to the soil that is needed, which is nitrogen.

32,727. Could you give an analysis of the Florida phosphates, and tell how much per cent. of phosphates they contain?—They vary from 60 to 80 per cent.; they are richer than the South Carolina phosphates, and the quantity is endless.

Nitrification of the soil by the pea vine.

32,728. (*Viscount Cobham.*) Has this amelioration of the soil been proved by statistics?—No, not by many statistics, because they did not know until within five years how it came about. There has been a long investigation, as you probably know, by our Professor Atwater, Professor Koenig, and others in Germany, and your Lawes and Gilbert, as to whether it was possible for a plant to derive nitrogen from the atmosphere; now it is proved that by way of animal or bacterial life the plants do get it.

32,729. As a matter of fact the production of the soil has been largely increased?—As a matter of fact, the pea-vine is renovating the exhausted soil of the south without much expense.

32,730. Is wheat a necessary element in the rotation that is being adopted on mixed farms?—It is not a necessary element, but an expedient one for the sake of the straw and for the sake of the bread; and because wheat is an absolute cash crop in the west like cotton in the south.

32,731. (*Chairman.*) One word more about this pea-vine; is it simply sown, and then when it grows is it ploughed into the soil?—It is ploughed under.

32,732. Do they feed it?—Yes, they do feed the vines, and also the peas to a certain extent; but the peas are just as dangerous a food as your horse beans are. If you feed to excess, you affect the kidneys; the peas are only used as a mixed food.

32,733. The main object, then, is to plough it into the soil?—The main object is to plough the vines under. Then there is our pea-nut, which you know over here to a certain extent; and which we know over there whenever anybody goes to the circus. The pea-nut will produce 30 to 60 bushels of nuts to the acre, and one to two tons of fodder besides, which is equal to clover in its nitrogenous value. The nut yields 50 per cent. of oil, and is the oil of China. The pea-nut meal is now becoming one of the richest nitrogenous foods for cattle, but it has to be used with discretion. I venture to forecast as great a development of pea-nut oil and meal as I did of cotton-seed oil 20 years ago. The production of pea-nuts in Africa is very large; they are taken from Senegambia to Marseilles in France. The production of pea-nut oil is something enormous, and the oil is very fine. We have had a test, in one of the swell New York clubs, of pea-nut oil flavoured with olive, as against pure olive oil—no, I think that was cotton-seed oil—pea-nut oil has a flavour; it was cotton-seed oil flavoured with olive.

Wheat growing on mixed farms.

32,734. (*Viscount Cobham.*) There is always a certain amount of wheat produced by these mixed farms for home consumption of course?—For home consumption and for straw.

Mr. E. Atkinson. 26 July 1894.

32,735. Then the question of growing more wheat upon them would be a matter of the price to be obtained here?—It would be a matter of price, and the price would be fixed here.

32,736. It is no longer a case that wheat must be grown and must be sold, whatever the price?—No, very few farmers depend wholly on wheat.

Effect of English price of wheat on wheat growing in America.

32,737. Can you give us any idea what the price should be here to encourage the cultivation of wheat for export?—I have merely said that in my judgment 25*s.* a quarter will not stop it.

32,738. That is somewhere near the margin, is it?—Just as I said in 1879 that I thought 34*s.* or 32*s.* might be the mark, I should now say that 25*s.* might be the mark.

32,739. (*Chairman.*) Of that 25*s.* how much would go to the farmer and producer in, say, Minnesota?—About 50 cents. That is about 2*s.* a bushel. 25*s.* a quarter is practically 75 cents a bushel in gold, or 3*s.*; it costs 5*d.* to get it from Chicago here——

32,740. (*Mr. Lambert.*) 5*d.* a bushel?—Yes; 10 cents may bring it from Chicago—that is the lowest quotation I ever saw; that leaves 65 cents or 32½*d.* in Chicago, which leaves 15 cents between the farmer and Chicago, which is ample. I am very well satisfied as far as one may be by this kind of observation, being no farmer myself, that the production of wheat will not stop or be diminished as long as it brings 50 cents a bushel at the main centres in the north-west.

32,741. (*Chairman.*) Have you got any table showing for a series of years what the price to the producer has been?—No; I do not think you can get those.

32,742. Of course that is the true test?—That is the true test.

32,743. Of the depreciation of price?—Yes.

32,744. Any other depreciation, due to the cost of carriage and so forth, is irrelevant really; the true test is the price—depreciated price or otherwise—to the producer?—I have tried in vain to get that. Take South Dakota. Men went in there 50 miles from a railroad and began growing wheat, and sent it 50 miles to the nearest railroad, and then grew prosperous down to 1892. There are no end of retired farmers living in the towns and villages of South Dakota, who settled there 20 years ago under those conditions and have made themselves prosperous in the face of this decline. This is not theory; I have got the absolute evidence of it in this pile of documents.

American wheat farmers and English wheat farmers compared.

32,745. How does an average farmer in those districts compare with an average farmer in this country. Does he compare more with the labouring man or with the farmer?—There is where you need the man of observation and capacity to go out and study for himself. They lived a squalid, hard life 20 years ago.

32,746. (*Viscount Cobham.*) Throughout the Western States?—Throughout the Western States—even in the richest counties of Illinois—they were smothered in their own grease. Now they have good schools and they have made progress; the children are as different as can be. The whole standard of living is lifted and changed, and you will find every example, from that squalid, hard life of former days up to the farmer who lives in as comfortable a house as you or I do.

Effect of extensive cultivation on production.

32,747. (*Chairman.*) That man would, I presume, have a considerable acreage of land—500 or 600 acres, or 1,000 acres?—He may, or he may have but 160—the ordinary quarter section.

32,748. (*Viscount Cobham.*) I suppose we may infer from what you have been saying that the total amount of produce extracted from the soil will largely increase in the future?—The soil is no longer being treated exclusively as a mine.

32,749. Will the produce increase faster than the population?—No doubt.

32,750. So that, although the wheat may not be exported to such an extent as before, agricultural produce of one sort or another is bound to be exported?—We have not touched the potential—not touched it. Take the Indian Territory, to which the title of the Indians has just been extinguished by the Government; it is as large as Great Britain, and pretty much the whole of it is as good land as the best land in Great Britain. What can you say with that just before you? I do not want to brag, you know—I am not that sort of

Mr. E. Atkinson.
26 July 1894.

man; but the idea of anything like a scarcity, or of any population that you can conceive of in the next century bringing about conditions of scarcity in the three million square miles of the United States, is to my mind preposterous.

Cattle trade of the United States.

32,751. Are there any possibilities of extending your cattle trade?—It would depend on whether that or something else would pay better. I have tried in vain over and over again to get the cost of a pound of beef, or a bushel of wheat, or a pound of cotton, and never could. They choose what will pay best. Down in South-West Virginia is a little loop of blue grass country; that is all rotten limestone, on which the blue grass is indigenous, where there is the largest herd of shorthorn cattle registered that there is in the world. Nobody ever heard of it hardly until recently. They can produce beef at about 3 or 4 cents a pound, about 1½*d.* to 2*d.* live weight to the extent of the land, and the land is hardly occupied in the mountain valleys of the middle south.

32,752. Do you agree with what we have been told, that there has been a change for the worse in the quality of beef that has been produced?—I have not seen it at home, but there is a strange difference there. Our people are the most wasteful people in the world. I went into Leadenhall Market the day before yesterday, and I could buy sirloin from American beef for less than I pay for it for my Sunday roast, but when it came to the round and the coarser pieces the prices were double and treble. You use beef more sensibly than we do; we waste: we are the most wasteful people in the world.

Prospects of British farmers.

32,753 Generally speaking, have you considered the prospects of the British agriculturist?—I am only wondering what you are going to do about it?—I only look on with wonder when I go down into such a country as Devonshire.

32,755. Because they hold on at all?—Because they hold on to wheat. Why do they not raise market-stuff and supply this huge market with the variety that you import from Denmark and Holland and France, and everywhere else? That is what puzzles me. Why do not your British farmers adapt themselves, as our farmers do, to the changing conditions? Of course I have studied your land tenure. Your whole system of land ownership is so utterly different to ours that there is no point of comparison.

Interest on mortgages in the United States.

32,756. What interest do your farmers pay for the money they borrow at the present moment?—They are paying now from six to seven per cent., as against 10 to 15 per cent. 10 years ago, and borrowing of their own citizens instead of coming east and coming elsewhere. The averages are all given for every State in the census report on mortgages. In order to show you the completeness and thoroughness of that investigation, I wrote to headquarters and obtained the final figures, and here they are. If you want to be assured that no investigation could be more complete, you have only to refer these papers to Mr. Giffen and he will tell you.

Local burdens upon land in America.

32,757. Is it possible to give us in an answer the average amount of local burdens upon the occupier of land in the States?—It is not possible to give you that. It varies in every State and in every township.

32,758. Could you say between what amounts?—I cannot tell you. Our taxation in the aggregate, divided *per capita*—a very uncertain method—is the lowest in the world, and in its method of incidence it is in some respects the most oppressive. I could not answer that question with any definiteness. The taxes on agricultural land are very slight.

32,759. Both local and Imperial?—There is no Imperial tax.

32,760. None whatever?—None whatever. Our Imperial taxation is derived exclusively by indirect taxation, and is about 22*s.* a head. The revenue from whiskey and tobacco supports the National Government. The only need we have of any other revenue is to meet the diminishing burden of pensions and interest, and they will be all wiped out in the next 10 years.

32,761. (*Mr. Everett.*) Do you raise an excise duty as well as a customs duty?—Yes.

32,762. You raise a revenue both ways?—Yes. We pay the entire cost of the government of the United States and the interest on the debt to-day out of the revenue from excise and the tariff on spirits and tobacco.

Mr. E. Atkinson.
26 July 1894.

32,763. (*Mr. Dalton.*) How do you raise your taxation on land; so much an acre?—It is direct taxation on the valuation for local or municipal and State purposes.

32,764. On the valuation of the land?—On the valuation of the land by the town assessors.

32,765. You cannot say what it is in the £ at all, can you?—It would be impossible, because it would vary. The direct tax will vary in the same State and in the same neighbourhood according to the amount that each town may spend on roads and schools and all sorts of things.

32,766. Do you have any local taxation returns that we could examine?—They have made in the census of 1890 a desperate effort to get the local taxation, but it is not published yet.

Cost of production in the United States.

32,767. (*Sir Nigel Kingscote.*) I conclude from what you have told us that to produce crops now, especially in the Western States, is much more costly than it used to be, that is to say, they cannot raise the same amount without manuring?—In some places, not all.

32,768. You mentioned a farm which had been in one family's hands for 200 years. How long do you suppose the virginity of the soil lasted there?—I did not intend you to infer that the product cost more, because by an intelligent system of farming the farmer gets a bigger crop in proportion both to his labour and to his capital at lessening cost.

32,769. Merely by the way it is cultivated, not by the manuring?—In part by the way it is cultivated and in part by manuring.

32,770. But you do not think it costs more to raise the same crop now than it did many years ago?—No.

32,771. Will that apply to the Western States in the same way?—I think so. I think the cost of wheat, for instance, per unit of product has diminished as compared with all but the first crop on the sod. The first crop is the cheapest, because it only costs ploughing and planting.

32,772. I am taking it after some of the virginity of the soil has worn off: you said just now that they were finding manure and lime to put upon the land, which would increase the product—it must cost something to bring that?—Yes.

32,773. But still you think they would be able to continue to get the same produce at the same price?—I do. I think they have diminished the cost per unit of product by increasing the quantity produced for the amount of labour and the amount of capital involved.

Production of wheat in the Western States.

32,774. As regards wheat, do you think they will be able to produce the same quantity of wheat, or to increase it very largely in the Western States now that they are turning their farms into partly meat-raising farms as well as corn and wheat?—Yes. The old ranche systems have gone by.

32,775. You think there will be the same quantity of wheat produced?—Unquestionably.

32,776. If not more?—If not more; that has been the case, and I do not know why it should not continue to be.

32,777. (*Viscount Cobham.*) You say the straw has come into value; how is that?—At first it would not bear transportation by waggon. Now it is carried to the cities to use in the ordinary way, and then it is converted into paper or it is converted into strawboard for finishing the inside of houses; it is used for a great variety of purposes. It is made as hard as board by compression. Then again, in 1873, much of what we call the offal of the flour mill, that is the bran and the shorts and so forth, went into the river as waste. Now that is all saved, and is an important element to the miller.

32,778. (*Sir Nigel Kingscote.*) What becomes of the offal, that is the bran, in these very large mills?—It is all saved and distributed all over the country for cattle feed.

32,779. That used not to be the case?—It went into the river. It would not pay for saving a few years ago.

Rents of farms in the United States.

32,780. (*Mr. Giffen.*) I think you told us that about 20 per cent. of the farms north of Mason and Dixon's line are worked by tenant farmers?—Yes.

32,781. Could you give us some idea of the average rent which is paid by the tenant farmers in different

parts of the country?—I could not. I do not think any data have been secured by which you could get an average.

32,782. Are there any observations showing that?—I do not know of any observations; sometimes it is a share and sometimes it is money; it is a relation between the father and the children or the hired men.

32,783. I think it would be very interesting to us to know here what are the sort of rents which are paid by the farmers where tenant farmers do exist, so as to compare with rents in this country?—I could not tell you.

32,784. Do the landlords in the cases of these tenant farmers provide the buildings and all that sort of improvements which landlords in this country provide?—Not as a rule, I should say.

32,785. Would the tenant provide his own buildings?—Yes, and he as a rule becomes a tenant in the expectation of buying. We are all land-hungry, especially the Irish.

32,786. (*Mr. Chaplin.*) He is the tenant of the State, I suppose?—No.

32,787. Who is he the tenant of then—a large owner of land?—He is generally the tenant of the first owner; the man who took up the land. There is not yet a generation of landlords in our country.

Amount of mortgages on farms.

32,788. (*Mr. Giffen.*) Then with regard to mortgages. Your statement I think was, that not half the farms owned by farmers in the United States are mortgaged, and that of the less than half which are mortgaged, they are mortgaged for something less than half their value. I should like to ask you if you could give me an idea of the total amount of these mortgages, if anybody has put together the total amount?—I have a pile of papers here on that point, but I got them so lately that I have not had time to digest them for myself.

32,789. Perhaps you could just tell me the total amount, and the number of the mortgages. I wish to have some idea of the average mortgage?—I could give you that without any difficulty. The article which I wrote for the "Forum," and which was published in May, was based on very nearly complete returns; the complete returns are now here, and they justify all that part which was estimated. Therefore, disregarding small fractions, you may take this article as a final statement. In the first place you would like to know the average size of the farms probably.

Average size of farms.

32,790. That would be interesting?—Under 10 acres, 150,194; over 10 acres and under 20 acres, 265,550; over 20 and under 50 acres, 902,777; over 50 and under 100 acres, 1,121,485; over 100 and under 500 acres, 2,008,694; over 500 and under 1,000 acres, 84,395; and over 1,000 acres, 31,546.

32,791. Are those all the farms in the United States?—Yes.

32,792. Not merely those that are mortgaged?—Those are all the farms.

32,793. (*Mr. Chaplin.*) What is their acreage altogether?—That I will give you presently. There were 4,564,641 separate farms.

37,794. (*Mr. Giffen.*) That would include the tenant farms, I suppose?—That includes everything. They averaged 137 acres each, and that average, you will observe, is nearer to the fact than such great averages are apt to be. Now the total area, omitting Alaska, is 1,900,000,000 acres; one-third, or 623,218,619 acres, is occupied as farm property, and is assessed and valued under that title, and more than half of that one-third is free of any encumbrance of mortgage or otherwise.

32,795. (*Mr. Chaplin.*) How is the rest occupied?—The rest is either unoccupied or is occupied by towns and cities, or is in forest or pasture.

Valuation of farms in 1890 and estimated mortgages.

32,796. (*Mr. Giffen.*) What is the valuation of the 623 million acres?—The valuation of all the 4,564,641 farms in 1890, including the improvements, was 13,279,252,649 dollars, and the estimated mortgage by the authorities on that property, as near as they can make it out, was 1,009,148,431 dollars; which is only 8 per cent.

32,797. How much?—1,009,148,431 dollars on distinctive farms. That is 8 per cent., but I call it 10 per cent., because I want to allow a leeway so that nobody can take any exception. The mortgages in force on January 1st, 1880, were estimated to be 1,500 million dollars, and there have been executed since 12,000 million dollars, the total for the 10 years, including those at the beginning, being 13,500 million dollars on all landed property, including city and town lots. 7,500 million has been paid, leaving 6,000 million dollars in force in 1890, of which a little over 1,000 million was on true farms owned and worked by the owners.

Mr. E. Atkinson.
26 July 1894.

32,798. (*Mr. Chaplin.*) Are those mortgages that have been in force?—The mortgages which were in force on the 1st January 1880 were estimated at 1,500 million dollars.

32,799. That is more than all that are left now?—This is on all real estate, on all property.

32,800. Not only on these 623 million acres?—No.

32,801. Is this mortgage of 1,000 millions that you stated on the farms?—That is exclusively on farms.

32,802. Could you not tell us what were in force on those first?—That has not been separately analysed.

32,803. That has not been?—Not yet, unless it is in this great mass of paper that I have not really had time to deal with.

32,804. The 1,500 million dollars was in force on all property?—On all property.

32,805. Could you tell us what the valuation on all property is; we perhaps might get at it in that way?—No, I do not take much stock of those big valuations; they are somebody's shrewd guesses.

32,806. (*Mr. Dalton.*) These are capital valuations, of course?—These are capital valuations.

32,807. (*Mr. Giffen.*) I think your figure is 13,000 million dollars for the valuation of the 623 million acres?—Yes.

32,808. 13,000 million dollars, as near as possible, is 2,600 millions sterling?—Yes.

32,809. Therefore, the 623 million acres would give you a valuation of about 4*l.* 5*s.*, or something of that kind as the value of the farming property in the United States? (*Mr. Everett.*) There would be what stock they would have.—That would not include the stock.

32,810. (*Mr. Giffen.*) Then the mortgages upon these 623 million acres, or rather upon half the quantity—because you told us that half are not mortgaged at all—come to about 1,000 million dollars?—Yes.

Amount of mortgages on farms.

32,811. That is the existing amount?—That is the existing amount of mortgage on true farms as distinct from speculative acres and city and town property. In order to allow for contingencies, I call it 1,300 million dollars, that is 10 per cent.

32,812. Then as far as the remaining property is concerned, which you say is not subject to any mortgage at all, is there any part of it do you think that is not mortgaged, because there is hardly a surplus of value to mortgage of any kind?—Oh, no; it is because the people do not need to borrow; they are perfectly independent.

32,813. But would it not be the case to some extent that the land is so much on the border of cultivation that it has not got a price upon which you can borrow?—It is merely out in the arid lands of West Kansas and Western Nebraska, where a crop of speculative farm mortgage companies went out and promoted mortgaging, and pocketed the money, and then allowed the poor devils who had lent the money to foreclose, to get nothing for it. Farm mortgages were so profitable for a long time that the speculative farm mortgage company grew out of the legitimate one, and they did induce the people to go out and take up these arid lands, and thus promoted mortgaging, and then left the mortgagees to get out as they could.

Registration of mortgages.

32,814. I should like to ask you now, so that we may understand the subject better, in what way the facts are ascertained as to the existing mortgages; are the registers in the United States, of which you speak, registers of deeds merely, or are they registers of property by property?—They are registers of the deeds of all landed property. Every deed is recorded and every lien upon it is recorded, otherwise it can be attached.

32,815. Is there a page in a ledger for a particular property?—Yes

32,816. Or is there a mere record of the deeds one after the other? What is the practice?—In point of fact the record is the title. If I take a conveyance to a

Mr. E. Atkinson. 26 July 1894.

piece of land I put it on record, and after that it is of no consequence whether I lose the deed or not; that record is my title.

32,817. That is to say, there is a page in a ledger for each property?—There is a page in a ledger.

32,818. It is a register of titles that you have got, and not merely a registry of deeds?—It is a register of deeds, and unless my deed is put on the register on its proper page, somebody may attach that property and hold it against my deed.

32,819. So that in extracting the particulars as to existing mortgages, what the clerks who do it would have to do would be to go over it, page by page, and find out the number of the properties and what were mortgaged; it would be a simple process?—That is what they have done in this stupendous piece of statistical work.

32,820. That is what I wished to understand, whether that was the machinery or not?—That is what they have done under an appropriation of 1,000,000 dollars.

32,821. (*Mr. Everett.*) Is that all based upon the Government map of the country? Is that map the key to the whole of it?—It is not based on Government maps, except in part. In the Western States it was based only on the Government maps, but in the older States it was based on the original metes and bounds established by private surveys or occupancy under Indian titles. After the title is once on the register I can throw my deeds into the waste-paper box; of course you do not do that, but if we lose our deeds it does not matter.

32,822. I was wondering how they identified each particular piece of land which was referred to?—The conveyancers all have their maps, and at the registry there are maps The map may be recorded with the deed, and generally is, showing all the metes and bounds. The title rests on the registry, and not on the actual document except between the parties to each deed. An attaching creditor can hold land against an unrecorded deed or mortgage.

32,823. And the registry really rests upon a map—an official map I expect, on which the whole land is shown?—Practically it comes to that, although it did not originate in that.

32,824. (*Mr. Giffen.*) Is that universal in all the States?—It is universal in all the States. All these mortgages are taken from the record, and the only possible error is that the mortgage shows on the record larger than it really is because the partial payments may not be discharged on the record until the final payment is made.

Effect of paper money on wages and their purchasing power.

32,825. I just want to ask you one question about this diagram that you have been good enough to put in; that is, to call your attention to the lines between 1865 and 1870; that was a time when the paper money was becoming more valuable, was it not?—Yes.

32,826. And accordingly at that time you had a very rapid fall of paper prices?—Yes.

32,827. But at the same time instead of a fall of money wages, you had a rise of money wages between 1865 and 1870, and you had consequently a still greater increase in the purchasing power of wages?—Yes.

32,828. I suppose it would be the case that if you had not had that paper money at a great discount in those years, you might have had a certain rise of prices in gold going on, as I believe was going on, on this side of the water, and that the purchasing power of wages might also have been increasing?—It was.

32,829. That is a fair thing that we might calculate on having?—That is a fact.

32,830. Along with a rise of prices you might have a rise of money wages going on still more, and a rise of purchasing power?—Yes.

32,831. The increase of purchasing power does not merely belong to a period like what we had after 1873, when prices fell and money wages kept practically steady, but you may have an increase of purchasing power with prices of wages also rising?—Yes

Definition of "appreciation of gold."

32,832. You quite agree, I understand, that if people use the phrase "appreciation of gold" merely in the sense of a general fall of prices, that is really the fact which has taken place?—Yes.

32,833. You do not dispute that at all?—I do not dispute that.

32,834. When you refer to the fact of what you spoke of as a depreciation of gold since 1850, what you meant simply was that an ounce of gold did not command so much human labour now as it did in 1850—that is what you mean by the depreciation of gold in that sense?—That is what it practically comes to.

Mr. E. Atkinson. 26 July 1894.

32,835. It is quite true that the ounce of gold, even compared with 1850, does purchase more commodities on the average than it did?—Unquestionably.

32,836. You agree with all that?—Unquestionably.

Gambling in "options and futures."

32,837. (*Mr. Clay.*) We have had evidence here of the gambling in options and futures in the Chicago and New York Markets. Can you throw any light upon that subject?—I never could see that that had any special effect on the final price. I know more about cotton than I do about wheat.

32,838. It is wheat we are dealing with?—The same reasoning and the same logic apply to cotton as do to wheat. I have no doubt that the cotton crop brings more to the farmer than it ever would, except for what is called selling futures. It is very easy to demonstrate the fact that it does. I have a large cotton mill in my mind, using 150 bales of cotton a day, and making goods of which 60 per cent. are exported to Zanzibar, and to China, and to South America, and a large portion of the customers are in Manchester, England. Of course, the capital of the company is large, but it is not large enough to carry a six months' stock of cotton, all paid for without going into debt beyond the limit that the law will permit a corporation to do without rendering its directors personally liable for the debt. Therefore, the manager receiving an offer for 1,000 bales of drills, would immediately go into the market and see if he could cover with a future on cotton, the understanding being that the drills were to be made and delivered in the next six months. He would then go into the market and see if he could cover with a future on cotton and get out with a profit, and if he could he would take the order; whereas, if he is forbidden to buy the future, as he would under the proposed law, which is now resting between the House of Representatives and the Senate, he may not accept the order for the goods. Then the farmer would have no assurance of his final price on the cotton, and the farmer being in need of cash, and picking all his cotton between October and January, would have to shove it all into the market at once, and take the lowest price of the heaviest receipts; whereas, with the future sold, he gets the highest price that the market for the goods will bear.

32,839. But six months after the mill got the cotton?—That is arranged by banks and bankers.

32,840. In buying the wheat they are buying and selling an article that never did exist?—My dear sir, the cotton crop is sold ten times over.

32,841. The same as wheat?—The same as wheat. Almost all the gamblers come to grief. I never knew a man that did not stay in just the one step too long and come to grief. The future price of wheat shows that they must have lost. If you will send to Washington and get Rep. John De Witt Warner's speech on that Bill, you will have the whole glamour of the effect on price shown up.

32,842. (*Viscount Cobham.*) Do you mean the Bill for stopping this system of futures and options?—Yes. J. De Witt Warner is one of the most intelligent members for New York, and he just disposed of that whole matter.

32,843. (*Mr. Clay.*) What is your opinion of the Bill then? Is it on a sound basis? Will it stop the futures and options?—Warner's speech is in opposition to Hatch's Bill. I do not think the Bill will soon become a law.

32,844. (*Mr. Everett.*) Is that General Warner?—No, indeed, not; this is another man altogether, John De Witt Warner.

32,845. (*Mr. Dalton.*) Has the Bill been thrown out?—The Bill has passed the House of Representatives, but it will never pass the Senate.

32,846. (*Mr. Clay.*) Are you for or against the Bill?—Utterly against it. It will be the hardest thing on the farmer that ever occurred, because it will force him to take the lowest price of the season when he is obliged to send the wheat or cotton into the market in order to turn it into cash.

Mr. E. Atkinson. 26 July 1894.

32,847. The witness we had here had been in the trade and had gambled a little in options in Liverpool?—Did he make any money?

32,848. He said it lowered the price to the farmer 10*s.* a quarter, but you do not believe in that?—No, I do not.

32,849. (*Mr. Giffen.*) It looks a very large order to ascribe such an effect to such a cause?—It is simply absurd.

Liquidation of mortgages.

32,850. (*Mr. Clay.*) You were talking about the mortgages being largely cleared off the farms within these last few years; did that not take place before 1887?—Yes, but more rapidly since; pretty much all the farm land of the West has gone through the mortgage mill first or last—90 per cent. of the mortgages are executed for the purchase and improvement of the land.

32,851. When did the farmer begin to prosper and clear off the mortgages—what year would you fix upon?—I do not fix upon any; he began as soon as he began to work with intelligence. The average life of the farm mortgage is less than five years.

Condition of farmers in Iowa.

32,852. You were talking about Iowa. Are the farmers there getting prosperous?—Iowa is an exceedingly prosperous State. I have got a lot of letters from Iowa. They are all grumbling at the low prices, of course.

32,853. Have they been able to pay the mortgages off with the low prices?—Why have they not? Here are the statistics of Iowa if you want them.

32,854. Did the paying off of the mortgages beg in much before 1888?—The payments have been going on ever since Iowa was settled. The farmers mortgaged in order to get there and get settled, and then they began to pay, and they have been paying ever since. More than 60 per cent., I think, of the farms of Iowa are free of mortgage.

32,855. Are these reports that you have been referring to all authenticated Government reports?—Absolutely.

32,856. The reason I ask you that question is that I was across reporting upon a land company in Iowa in 1887, and I found a very different state of matters; but your reports refer to the present date?—Up to 1890.

32,857. Yes?—By that time I should suppose the best mortgages in Iowa would have been held by Iowa men, and the mortgage companies would have invested away off in the arid regions far West.

32,858. They were investing in the Emmett County and round about there?—I do not know where it is.

32,859. It is about 15 miles from Ennisburg, and round about that place?—Undoubtedly there are mortgages which have come to grief.

32,860. I am only telling you my experience there, that there were about 90 per cent. of men who could not pay the interest on the mortgages?—They must have been very badly selected.

32,861. They were a very good class of men?—I have here the whole story of Iowa from the records.

32,862. I thought, perhaps, you would refer to a date after that, you say the mortgages began to be cleared off in 1887?—Both before and since. It is a constant ebb and flow. The first settlers who go in and take up the land borrow the money to do so, they pay up, others follow. Many of the first settlers are now lending money to new-comers.

32,863. They take up the land in sections?—Yes, and then they borrow.

32,864. And build?—Yes, and they pay off those mortgages and another set comes in.

32,865. My experience was that the great bulk of them have not only not been able to pay off the mortgages, but they have not been able to pay the interest upon the mortgages; the first men have left the farms and let them to Danes and Swedes on the half-pay value system or on the cropping; are you aware that that is done?—I am aware that it is done in some very limited places.

32,866. Have you been across Iowa yourself?—Yes, I have been across Iowa myself.

32,867. Which part?—Up and down and across over. I went out into Iowa long ago on a special engine with Governor Grimes on the first railway across.

32,868. Do you know much about practical farming?—No, I am not a practical farmer, any more than I am an economist; I only go by these facts.

Mr. E. Atkinson. 26 July 1894.

32,869. I was struck by your facts, and I was especially struck when I compared them with the practical information that I had myself?—You can find unfortunate investments in mortgages in Iowa. The only thing that is difficult in such an investigation as this, is to fix your eye on the right point.

32,870. Another matter that makes me note my opinion is this—that the number of land companies paying little or no dividend for the money advanced on the mortgages shows and proves pretty clearly that the tenant, or the landlord, you may call him there, has not be able to meet these mortgages and interest?—Do you refer to some of the land mortgage companies that have come to grief?

32,871. Not exactly come to grief yet?—Well, that do not pay.

32,872. They have not been able to pay their dividends?—If you will look into the particulars I think you will find in nearly every instance that the mortgages that do not pay are on speculative city lands and suburban property.

32,873. No suburban property; they were right outside from the town. It was *bonâ fide* farming land, taken up with well-built houses, well-built steadings, roads, and everything—and well cultivated?—Just before I left New York I was talking with the manager of a mortgage company whose principal investments are out in that section. They are carefully managed and are large. They had had very slight foreclosures, and were collecting their interest, and making regular dividends right along. It is a question of selection and a question of management. More than 60 per cent. of the farms of Iowa are free of any mortgage whatever, I think.

32,874. Have they all been made free by the late prices they have been getting, 50 and 45 cents a bushel on wheat?—I mean to say that has been continuous, and down to the year 1893 it had not stopped; from 1891 to 1892 the liquidation of mortgages continued, and, as I said at the beginning, I do not take 1893 as a rule for anything.

32,875. You know that across that country you have many casualties. You have prairie fires, you know?—Yes.

32,876. Consuming all your produce and all the hay you have made in the 12 months?—Yes.

32,877. And you have blizzards, nearly blowing the roofs off your houses?—Yes.

32,878. Are these not very dangerous elements for a man to take a property, and get a mortgage on it, and expect to pay interest and live upon it?—Yes, but they are sporadic and isolated. Iowa is a very rich State.

Pan Handle of Texas and wheat growing.

32,879. It is very rich in blizzards, and, I believe, in prairie fires. Now, I will take you away down to the Pan Handle. You tell us that it is largely now getting into a wheat State?—Yes. How largely I do not know. I stated that they had turned out three years ago five million bushels, and they are now sending out a much larger amount.

32,880. Which counties do you refer to in the Pan Handle?—I do not know: I take the Pan Handle as a whole. It was held for grazing until lately, and they now find that they can raise wheat and fruit.

32,881. That is only where there is a supply of good water, for they have not rain enough for that?—They have 22 inches of rain a year in five years out of six. They have enough.

32,882. They are often troubled with severe drought, are they not?—One year in seven, they tell me.

32,883. In Kansas are they not troubled with severe droughts too?—That is an entirely different climate up in the Western Texas. The climate of the Pan Handle has a peculiar climate coming round from the Colorado. If you send to Washington to the Bureau on Climatology you will find that the Pan Handle of Texas has a very peculiar climate.

32,884. Has this wheat-growing been going on long?—Not in the Pan Handle. They began five or six years ago, I believe.

32,885. You spoke of the Pan Handle?—I said we had developed in the last five or six years a new wheat country which is promising, and that is the Pan Handle

of Texas. How far it is to go I do not attempt to testify, but beginning five or six years ago with no wheat at all, and with the idea that the land is only fit for grazing, they are now turning out a very appreciable quantity of wheat and increasing the crop every year.

32,886. You could not give the counties where that wheat is growing?—I could not, but presently I can. I have sent a lot of my letters down there. I know the men that have invested their money down there and are bringing out the wheat.

32,887. I know a property that was bought there of 300 thousand acres; it was bought at 1.25 dollars, and I thought it was bought cheap. I am very glad to hear that wheat-growing is going to take place. I think we had better reserve the property. We cannot get over 50 cents for it to-day—that does not look like increased prosperity in the Pan Handle?—Not very, but if you try to buy up an improved farm you will find it is another thing.

32,888. There are very few improved farms in the Pan Handle?—Very few.

32,889. I never saw anything like it, except a cowboy's hat or two?—There are very few.

32,890. You are really practically acquainted with the Pan Handle when you make these statements?—Not myself.

32,891. Then this information is derived from letters from different departments which you have got?—No; the information from the Pan Handle is from men that have gone down there and are operating as growers of wheat—it is direct from them; I do not take any average statements from anybody.

32,892. You positively have heard that the Pan Handle is a wheat-growing country?—It is practically known to almost everybody who deals in wheat.

32,893. Do you know near Fargo, where the wheat grows well—Dalrymple's large farm?—Yes.

Bonanza farming.

32,894. Has it been a profitable investment?—Down to a certain point it was, I understand, but I think that Bonanza farming, that large system of farming, is going out.

32,895. When was it a profitable concern; how many years ago?—I cannot tell you that.

32,896. In 1885?—I never had any great faith in that system.

32,897. Do you know what quantity of bushels per acre they could grow there?—No, it varied with the season.

32,898. Could you give me an average?—No.

32,899. Would you be astonished that they could not grow more than 9 or 10 bushels an acre?—I should not be at all surprised.

32,900. Do you know the district of Fargo at all?—I have been through it.

32,901. Is it a good wheat-growing place?—It is said to have been a good wheat-growing place, but I do not know particularly about it.

32,902. You think Dalrymple's farm was a profitable farm once for wheat-growing?—On that large and extensive scale, but only for a short period—that is the all-wheat system, which is going out.

32,903. Did it not ruin a man 8 or 10 years ago?—I think very likely some of the beginners.

32,904. So it had not been very profitable for him?—Very likely not to some of them. Others have adopted mixed farming and have thriven.

Interest on mortgages.

32,905. (*Mr. Dalton.*) The rate of interest on the mortgages I think you say is 6 per cent. or 7 per cent.?—It is so stated in the report I have here.

32,906. Is that the average rate of interest a man expects to get for an investment in the United States?—In this western section of the country; the safe rate in the east is not above 4 per cent., coming down to 3 per cent.

32,907. I was trying to get at the rent of the land; I see the valuation brings it out about 5*l.* an acre. Would it be right to take the rent at 6 per cent., or 7 per cent., or 4 per cent., or 5 per cent., on the valuation? What rate of interest would a man buying land expect to get on it?—I do not think it would be safe to buy land with the expectation of leasing it at any rent. The great bulk of the farming land of the United States is what you may call no-rent land. That is to say, it depends upon the man, not upon the capital. Investments in land for the purpose of getting rent would be utterly unsafe.

Average wages of agricultural labourer.

32,908. What would be the average wages of an agricultural labourer there?—They run from 16 to 20 dollars with board.

32,909. A month?—Yes. All those facts are in the statistical abstract, and you can get them to any extent.

32,910. (*Mr. Giffen.*) Is that for continuous employment throughout the year?—Yes, those are the men employed through the year. It is from 16 to 20 dollars with board for continuous employment, but they vary very much in different States.

32,911. (*Mr. Dalton.*) That would be very much higher than in England?—They are twice, three times, and four times as high as in England.

32,912. Therefore, although the rent there would be much lower, your labour bill would be much higher?—The labour bill is higher, but whether it is more effective or not you know best. I do not know how far you adopt machinery to the full extent that we do.

Cost of production of wheat.

32,913. (*Captain Owen Thomas.*) Does the wheat-growing land show any signs of exhaustion?—In some places it does, in other places it does not.

32,914. Is it not necessary to manure the land in order to produce the crop after a certain number of years?—In some places it is, and they are adopting the rotation system, and so renovating the soil to meet that contingency.

32,915. Would you say that the cost of production could be reduced further?—I never knew any art yet in which we have reached the lowest point of the cost of production. We have thought so a great many times. When copper was down to 13 cents, they thought they had got to the bottom line. Now they are making more money on copper at 9 cents than they ever did before. The moment the silver mines came into a natural market by Uncle Sam stopping the purchases, the managers all came to Chicago and set the machine shops going making new machinery for the silver mines so as to meet the lessening price and turn out the same quantity; they are likely to continue to do so as far as I can learn.

Home demand and price of wheat.

32,916. Is the home demand a factor in the regulation of the prices?—People eat what they want in the United States; I do not think price affects them much. It is a barrel of flour a year to each inhabitant, and a dollar or two difference on a barrel of flour affects only a small proportion of the people. The Irish will have the very finest wheat flour. They will not take anything else; they will not take the middlings, which are a great deal better and sweeter.

32,917. So the prices are really fixed here?—The price of the whole wheat crop is fixed here. The farmers are beginning to find that out; they are beginning to find that they are selling on a free trade basis and buying on a different one, and they do not like it.

The witness withdrew.

Adjourned to to-morrow at 12 o'clock.

Fifty-seventh Day.

Friday, 27th July 1894.

PRESENT:

The Right Hon. GEORGE JOHN SHAW-LEFEVRE, M.P., in the Chair.

Viscount Cobham.
The Right Hon. Baron Rendel.
The Right Hon. Henry Chaplin, M.P.
Sir Robert Nigel Fitzhardinge Kingscote, K.C.B.
Robert Giffen, Esq., C.B.
Charles Isaac Elton, Esq., Q.C.
Captain Owen Thomas.
Francis Allston Channing, Esq., M.P.
John Clay, Esq.
Cornelius Neale-Dalton, Esq., C.B.
Robert Lacey Everett, Esq., M.P.
John Gilmour, Esq.
George Lambert, Esq., M.P.
William Cutlack Little, Esq.
Walter Hume Long, Esq., M.P.
Charles Whitehead, Esq., F.L.S.

Herbert Lyon, Esq., *Secretary.*
R. F. Crawford, Esq., *Assistant Secretary.*

Mr. Edward Atkinson recalled and further examined.

Mr. E. Atkinson.
27 July 1894.

Railway rates on wheat west of Chicago.

32,918. (*Mr. Clay.*) I had the pleasure of putting some questions to you yesterday, about the price of wheat in America; could you tell me to begin with to-day what is the cost of the carriage of a bushel of wheat from Iowa to Chicago?—I do not know exactly what it is.

32,919. You do not know how much it costs per hundred miles on the American railways?—No. It was much more before 1887 than it is now. The general rates of traffic west of Chicago, have been in the last few years reduced to about the standard of rates that prevailed from Chicago to the east prior to that time; but I cannot give you the exact data. In the statistical abstract of the United States you will find exact information I think, on all those points.

32,920. You have come here equipped with a good deal of statistical evidence, and I should have thought you would have known what were the rates for carrying that produce to the east, so that we may compare the income of the western farmer in Iowa from the sale of his wheat in Chicago?—Do you think I can carry such a mass of statistics in my head? I refer you to the authorities—to the official reports and the statistical abstract of the United States. All I can say is that there has been a large reduction in the cost of carrying wheat from Iowa and other western points to Chicago since 1887 by a sort of the equalisation of the rates of traffic west of Chicago to a substantial adjustment with those east of Chicago.

32,921. But you have no idea what the rate for carrying wheat per 100 miles is?—I cannot give you it here; I could not be expected to remember all those exact details.

32,922. I cannot ask you to know more than you are able to know?—Of course, I cannot testify to exact details, but I refer you to the exact authorities where you can get that information without any difficulty.

32,923. I was wanting that information in order to calculate the charge which the landlord-tenant had to pay for the carriage of his wheat from his farm to Chicago. I see in to-day's paper that wheat is selling in Chicago at 50 cents a bushel?—I have excepted this year from all statistical considerations. There is undoubtedly a depression due to a paralysis of industry and a paralysis of railways, which I attribute to the tampering with the currency of the country.

32,924. Have you the rate to Chicago, or to New York, which would enable us to calculate the price of wheat at Chicago 12 months ago?—The last statement that I saw in the papers before I came away was that it cost a little under 10 cents a bushel from Chicago to Liverpool, and that is mostly for railway carriage, because I understand the steamers are almost taking wheat for ballast, but I cannot make the separation between the railroad charge and the shipping charge.

32,925. I am not asking you that question; I am asking you the question what was the price of wheat in 1893 in the Chicago market, at the Board of Trade there?—That I cannot inform you; it is in the neighbourhood of 50 cents a bushel, or from that up to 60, and it is fluctuating.

Mr. E. Atkinson.
27 July 18

Price of wheat in Chicago.

32,926. We have it in to-day's paper at any rate that wheat at Chicago is 50 cents a bushel, that is 2*s.* 1*d.*?—I think it very probable.

Average produce o wheat per acre.

32,927. You allowed yesterday that the average quantity of wheat grown in America was generally 9 or 10 bushels an acre?—I do not take any stock in that average at all, because that includes southern wheat production where they do not make over 5 or 6 bushels. As to the average per acre of the United States, I would caution you against placing any reliance upon any such estimate.

American statistics o agricultur

32,928. Then statistics in America are not to be at all times depended upon?—The statistics are as accurate as statistics can be, but I have learnt as a man of business never to trust great general statistics; if you do you are sure to fail. Our statistics of agriculture cover 3,000,000 square miles, varying in soil—climate and humidity—in race, colour, and condition of the labourers.

32,929. Do you trust implicitly those statistics which you were reading to us yesterday?—I do implicitly, because they were from absolute data, but I have observed that the man who conducts his business on the basis of statistics is pretty sure to fail unless he has judgment by which to qualify them.

32,930. Statistics as a rule are not to be at all times depended upon, then?—Statistics only lie when the liars make the statistics; but even true statistics must be qualified by judgment.

32,931. (*Chairman.*) What you distrust is averages drawn from them?—I distrust great averages, because I know there is a good deal of wheat grown in some of the Southern States in the old-fashioned skinning method, where the product is a few bushels to the acre; but I also know that the average of the great wheat producing States varies with the season, and is much higher than the average of the whole country.

Cost of growing and marke ing wheat in the United States.

32,932. (*Mr. Clay.*) What I have arrived at brings out the price of wheat at Chicago at 20*s.* 10*d.*; now you have to deduct from that (which I am sorry you cannot give us) the cost of carriage from the farmer's home to Chicago; then you have again to deduct the cost of seed and general labour, however cheaply it is done, still there is a certain amount of money to be deducted from that return per acre, you will allow, I presume?—Yes.

32,933. Then there is another important deduction which, perhaps, you and I do not agree upon fully; that is, the general mortgage which there is on the property?—Yes, when there is a mortgage.

Mr. E. Atkinson.
7 July 1894.

32,934. That land, as far as I can see, generally, will cost about 50 dollars an acre, that is, good growing wheat land would be 10*l.*, and at five per cent.—and you cannot get money at less than five per cent.—there would be 10*s.* off them for the mortgage?—I do not think the farmers of the West charge any rent on their land; what they get for it is their profit.

Mortgages in Iowa.

32,935. But still, the interest on the money is the rent, is it not?—In Iowa, 60 per cent. of the farmers or more are free of any mortgage whatever.

32,936. You and I differ upon that point?—I take the actual facts from the registry, and I have the proofs here.

32,937. I am going upon the actual facts which came to my knowledge when I visited Iowa, reporting for some land companies, when I found a very different state of matters; but we will agree to differ on that point?—We will agree to differ on that.

Cost of growing and marketing wheat in the United States.

32,938. If you take 10*s.* an acre for mortgages, which I put it at, and many of them are at that; then if you take the carriage which we cannot get at and you cannot give me a figure for it—I mean the carriage to Chicago per bushel of wheat——?—I do not know what it is, I only study wheat as an incidental crop of second-rate importance in our country.

32,939. But there is one thing you cannot dispute, the farmer must have seed and labour?—Yes.

32,940. What do you put down for seed and labour for cultivating an acre of wheat in America?—That depends on where you go. In California in the San Joachim valley, which sends by itself wheat to Liverpool, the average cost of ploughing, rolling, planting, harvesting, winnowing, and putting into bags on the farm of George S. Berry, San Joachim Valley, California, is less than 4*s.* an acre. It would be absurd for me to put that in as an average. That is the minimum. From that it runs up to a very much higher point, according to the intelligence and capital of the farmer.

32,941. Dealing with California, do you know the Merced Valley?—Yes, I know of it.

Farming in California.

32,942. I can speak from experience; I have been there, and we have a property there. We are not all confined to the wheat growing, but we have what you think is, and what I believe will be, in America, the most profitable method of farming, namely, mixed husbandry. We have wheat, we have barley, we have alfalfa; we are on 2,000 acres, and we run a herd of 10,000 cattle; with all these advantages, with buildings well equipped, and with capital of our own and no borrowed money, we have not been able these last three half years to pay one penny dividend. That does not look very prosperous, does it?—Not for the corporation; but I daresay an individual farmer next you has been growing rich all the time.

32,943. What is the difference between the individual farmer and the manager, who is perhaps as clever as he next door to him?—I have observed that corporations fail where individuals succeed. I think that is somewhat your experience with the limited companies of England.

32,944. We have one of the best men in California managing that property?—I daresay.

32,945. Do you think he would fail where another man would succeed?—Yes, he might.

32,946. Would it not be *vice versâ*, sometimes?—Yes. Your corporation will divide out its dividends when they ought to go back into the property; but your individual keeps improving his farm and makes money when the corporation fails.

32,947. If a man does not take large dividends and runs a farm up to A1 mark——?—I may say that I do not think it is judicious for me to discuss the minute points of wheat growing. I am not here to make a case, I am here at the request of your Chairman. I happened to forecast 34*s.* a quarter for wheat in 1880 as a profitable price to the American farmer at a time when your Commissioners, Messrs. Pell and Read, happend to report that the American farmer would stop at 40*s.* My forecast has been fully justified, and Messrs. Pell and Read now admit their profound error. I study the question as a general question, and I now forecast 25*s.* as the point at which we may stop. I shall be very glad to have you prove otherwise, but all I can do is to give you the general facts. I cannot go into the details of wheat cultivation.

32,948. You say that wheat selling at 50 cents per bushel in Chicago may pay the Western States farmer?—I think that this year is exceptional entirely. I have reports from Western farmers of their actual cost of wheat which put it at less than 25 cents a bushel, and I have reports from others putting it at 40 cents, and so on.

Mr. E. Atkinson.
27 July 1894.

Cost of growing wheat in Western States.

32,949. Do you think at that price he will pay off his mortgage and will do as you say, make money and be able to retire as you have told us some of them have?—I simply know that as a matter of fact the farmers of South Dakota beginning 20 years ago on nothing have paid off their mortgages, and have retired to the towns and cities in large numbers, and their sons and their hired men are carrying on their farms. I know that in North Dakota, where they are affected by droughts and cannot diversify their farming, they are now introducing a most important system of irrigation by artesian wells, of which a full report is here, and I will put it in if you like. Up to this point, in the face of declining prices, the farmers of the wheat growing States have paid their mortgages, the average life of the farm mortgage being less than five years, and they have prospered. The only inducement for me to come here to testify before you was that my vision of the future is the commercial union of the English-speaking people. If we can supply you with some of our foods it will be to our mutual benefit; if we cannot then your farmers may not be obliged to change their present old-fashioned methods.

32,950. Is it not the case that many of the first men that took up that land had to be foreclosed upon?—Yes, that is true. Many of the men who first took up that land had no previous experience in farming, and were incompetent. They have drifted off.

32,951. Is not the American farmer not only very extravagant as you say in the use of beef and mutton, but also in his management, in his treatment of his implements and all those things which he takes across the praries, and lets them lie there out in the open from one year's end to another. Is he not extravagant in these things also?—The half of them are the most wasteful people under the sun, and the other half are thoroughly intelligent and there is a survival of the fittest, and your great supply of wheat is coming from the survivals who are prospering to-day, barring this particular year. Before Mr. Chaplin cross-examines me I would like to put in some papers that you may or may not make use of, and I will take just five minutes to state the reason and then I will submit to the cross-examination until a quarter before 2, if desired. I have no case to make. I am neither interested in farming nor in farm mortgages, but as it seemed to me that there had been a great many statements made apparently before your Commission which I deem to be thoroughly erroneous and from which you might draw very false deductions, I very cheerfully assented to the request of your Chairman to come here and I am at your service entirely. I rather regard it as a good thing for the United States that you should be sending back to us our own securities. If I were an Englishman without very close relations with some trusty people in the United States, I should divest myself of all American securities until the question of our standard or unit of value is absolutely settled by law. I consider it settled, in fact, to-day and that we shall never surrender under any circumstances the gold unit of value, and I so stated when I was here as Commissioner for the Government in 1887. But you cannot be expected to believe that, and I think it would be better that under such conditions we should not owe a foreign debt, for it is interfering with the rate of exchange and destroying the normal conditions of exchange as it does now. On our merchandise traffic of the last year we have a large credit balance and yet you are sending home our securities and turning the rate of exchange against us. We are accumulating capital at an enormous rate in the United States, and I want to see the time when the United States become the creditor nation both on capital lent and on merchandise sold. Then we will be in a pretty strong position. I therefore appear by request. Now I will put in, if you will allow me, the analysis of 22 States, including Iowa, from the official documents (*see* Appendix). I will just submit one line. In regard to the farms of these 22 selected States complete, the conclusion is that $\frac{3}{10}$ per cent. of the farm families hire, but when you take out the south that is reduced to less than 20 per cent. $67\frac{7}{15}$ own their farms. $30\frac{32}{100}$ per cent. of the farm-owning families own subject to incumbrance. $69\frac{78}{100}$ per cent. own free of incumbrance. That includes the State

Official statistics of mortgages in 22 States.

Mr. E. Atkinson.
27 July 1894.

of Iowa, it includes Wisconsin, and it includes some Southern States, I left the final report with Mr. Giffen yesterday and I will put that in if you care to have it. I have here the statistics of agriculture showing the number of farms, the valuation, the sizes, and the ownership (*see* Appendix). Here also are the statistics of manufactures, but I give you this caution on them, that that is where the census figures need to be qualified by judgment. There is an apparent enormous increase in the capital in manufactures during the last decade, but in the present census they have attempted to include the working capital, and in the last census they only included the plant. Therefore, so far as capital is concerned this has to be qualified, but so far as concerns the advance in wages taken from the books it proves a large advance in wages since 1880. Here is one of the figures of statistics which I always use but do not take much stock in. It shows the wealth of the United States computed in dollars. It is a shrewd guess, more or less near to the fact, but goes for what it is worth. The evidence of the increase of capital I find in my own profession of underwriter in the figures which I gave yesterday, which I believe were left here, in which the increase of property insured against loss by fire since 1865 is shown to be something enormous. I put in the trade balance of the United States for the year 1892 by which it appears that we sold to European countries 485 million dollars more than we bought. We had that credit in British gold with which to flood our country. We drew against it for our tropical produce and left a balance to our credit at the end of the year of 43 millions sterling, and we threw that away by free coinage devices and tampering with the currency. We now have a larger balance to our credit which we are expending for the enormous influx of American travellers and also for buying back our stocks and bonds in which you have perhaps a well-grounded distrust. The summary of the mortgage figures is contained in this address to the New York Chamber of Commerce who are not apt to publish at their own expense and circulate by thousands any documents that are not authentic or of authority. Here you will find the relative income and expenditure of the country for a series of years: that may be of interest. Then I put in the chart which I gave yesterday, and I put in the "Forum" article on the meaning of farm mortgage statistics. Now I shall lend to you with pleasure the evidence of farmers and the latest United States' statistics of mortgages for you to make such digest as you may see fit. I received last night another report, a most interesting one, from a farmer in Texas, a planter of South Carolina, who having gone through the war of the Rebellion, and having previously invested all his property in slaves came out of the civil war ruined; with a wife and family upon him. He moved to Texas where he raised cotton and corn, and brought up and educated his family, and who now states that he is worth a hundred thousand dollars made out of cotton and corn in the face of declining prices. I will put in also, if you care to have them, all these tables that I left you yesterday, and these additional tables; but they are in better form in the volume on the United States of America. My general conclusion is that we have to deal with what President Andrews of Brown University calls "a fatal fall in prices," which he proposes to stop by legislative measures in regard to the currency. When I undertook to investigate that fatal fall in prices, which of course has been vastly greater from the highest point of inflation in the United States in 1865 than it can have been in any European country, I found that ever since 1865, with a moderate increase of population, we have increased our grain crop rateably by nearly double; we have carried our steel product from nothing up to the largest product of the world. We have carried forward every crop; we have increased in every direction until, as I said, quoting from an old Hungarian friend, we are "smothered in our own grease" in trying to find an outside market for all our surplus. During that period I find that the wages of the workmen, who constitute 90 per cent. of the community, have steadily advanced until the skilful workman is twice as well off to-day as he was at the highest point in abundance of a poor kind of money, while the common labourer both on the farm and and in common work is 50 per cent. better off. Then I find that capital has accumulated so fast that in my own experience, whereas the fair average rate on industrial capital prior to 1860—and I have borrowed millions for manufacturing purposes—ranged from 7 to 8 per cent. on a safe basis, it is now 3 to 4 per cent., and the normal rate on capital in the United States free of taxation will be hereafter nearer to 3 per cent. than anything else. Therefore I find that we have a reduction in the rate of interest, an increased efficiency of capital, a vast increase of products, and a great rise in wages accompanying the so-called "fatal fall in prices." Therefore I desire to see that condition continued without tampering with the currency or attempting to interfere with the natural laws. All this we have done in spite of every possible stupidity of legislation both in regard to raising the revenue and in dealing with the financial system and the banking system of the country which anybody could possibly have committed. If we had not been stronger in our facts than in our intelligence we should have been ruined half a dozen times over. I have no case to make; I merely submit these facts for what they are worth (*the witness then handed in the documents mentioned in the answer*).

Wealth of the United States.

Fall in prices since 1865.

Rise in wages since 1865.

Accumulation of capital.

Mr. E. Atkinson.
27 July 1894.

32,952. (*Chairman.*) It is a very interesting statement that you have made to us and we are very much obliged to you. With reference to this paper entitled "The Multiple Standard," as I understand that is an estimate formed of the quantity of food and clothing required for an average man?—In order to establish that multiple standard I investigated the actual expenditure of a lot of new England mechanic's families.

Explanation of "The Multiple Standard," showing purchasing power of wages.

32,953. An average mechanic's family?—An average mechanic's family in New England—what they eat and drink and wear.

32,954. Then you have taken the aggregate for the year of the family, which is an average family composed of man, wife, and three children, I suppose?—Yes.

32,955. And their food and clothing; and then you have estimated the purchasing power of that, or rather the value of that in a dollar of gold?—Yes.

32,956. Then you show, in this table, that in 1850 it was 30 cents, but I do not quite see what you mean by 30 cents there?—I will explain it. At the time that this table was made—I forget the date, but I think it was in 1890—that quantity of things could be bought at the rate of 30 cents a day; in 1850 it was 30 cents a day; then it rose to 55·69 in 1865; in 1890 it had gone down again to 30 and it is probably about 28 to-day.

32,957. Then that table shows that if the money wages were the same in 1850 as they were in 1890 the purchasing power would also be the same?—It would not remain the same, because the wages being doubled or thereabouts.

32,958. The wages have doubled in money since?—Yes.

32,959. Therefore would you say that the average mechanic is twice as well off now as he was in 1850?—Yes, and as in 1865, more than twice as well off.

32,960. That is as in 1865, but not as in 1350?—The proportions are given in other tables as compared with 1850, but I take 1865 as the worst point in our history.

32,961. I was going to say, that assuming wages were the same in money in 1850 as in 1890 then the position of the mechanic would have been the same as now?—Yes.

32,962. But in consequence of the paper currency the purchasing power fell from 1850 to 1865 from 30 cents per diem to 55?—Yes, I have exact computations of that in another paper here.

32,963. Then the purchasing power has risen again from 1865 to 1890?—Yes.

32,964. So that assuming the money wages were the same the mechanic would be better off by about 40 to 50 per cent. between those dates and, besides that, he has all the advantage of the rise in the money wages?—Yes, and more than that.

32,965. (*Mr. Little.*) Referring to the diagram that you gave us yesterday, I think the purple line showed the purchasing power; I should like to ask you whether that is the purchasing power of a definite quantity of money or whether it is the purchasing power of so much wages at different prices?—The diagram which I submitted yesterday is not based on that multiple standard; that diagram is based on the averages of all prices and all wages.

32,966. But there was one line which showed purchasing power, and I want to understand whether that showed the purchasing power of a dollar, or whether it showed the purchasing power of a day's or a

week's wages turned into commodities?—It shows the purchasing power of the day's or week's wages turned into commodities.

32,967. At the present prices of commodities?—Yes. Where the dollar fluctuates and jumps here and there and has no significance at all, you must have some other standard; and that line shows the purchasing power of the day's work. With reference to prices gold has appreciated if you merely consider the relation of one commodity to another; but with reference to labour from the employers' standpoint, gold has depreciated and with reference to the workman gold has appreciated both absolutely and relatively, for the workmen can earn more gold and he can get more for it.

32,968. (*Mr. Channing.*) Do the interesting figures which you have been explaining to the Chairman correspond with Mr. Carroll Wright's estimate of the purchasing power of wages in the United States generally?—The diagram which I have put in is taken exclusively from Carroll Wright's figures and for this reason; that President Andrews, of Brown University, said that he distrusted my own figures and referred me for authority to Carroll Wright; I took Carroll Wright and his figures proved even more than I had proved by my own, for I had been a little too conservative.

32,969. Those who look into these statistics are familiar with Carroll Wright's figures. I believe they are the only ones which are considered generally to be reliable?—Absolutely, I know nothing like them in economic history.

Cost of producing wheat in United States.

32,970. I do not know whether in your evidence you have already put in any detailed statement of the cost of production of a bushel of wheat in the same way that he has of the cost of production of iron, and so on?—I consider it impossible. I have tried in vain to get the cost of cotton, wheat, beef, and corn. When corn was the cheapest fuel that a man could use, even when he had coal right under his farm and when he could raise corn, *i.e.* maize, at three dollars a ton and burn it, what is the use of saying anything about cost in money?

Profitable price of wheat.

32,971. There is only one question I should like to ask you in connection with that: that is when you consider the profitable figure at which American wheat can compete in the English markets, do you yourself, in forming a rough approximate estimate, take into consideration the interest on the purchase money of the land?—No, I do not, because the greater part of our land is no rent land, and whatever the man gets for interest, or rent, or whatever you choose to call it, is a part of what he saves and adds to his capital.

32,972. You based your general estimate then on the fact which you have been establishing to your own satisfaction to us, that the mortgages have been very largely reduced and that a great portion of this land is free from them?—The greater portion is free.

32,973. In 1880 your forecast of the profitable figure was 34*s.*?—Yes.

32,974. Now it is 25*s.*—that represents, I think about 75 cents a bushel, does it not?—75 cents here.

Farm price of wheat in the United States.

32,975. What is the average price on the farm to the American farmer?—That is another impossible statement, because it will depend upon his proximity to a railroad somewhere; and he is nearer a railroad now than he ever was before.

32,976. But you must form some impression of what he receives in order to be able to state that the price is profitable, must you not?—I have an impression, and it is only an impression, that throughout the great grain growing region of the North West at 75 cents here he would get from 40 to 50 cents.

32,977. I was told when I was in the United States some years ago—I think about six years ago—that the farmers were then receiving only 18 cents a bushel on the farm; do you think that would be an exceptional state of things?—That would be at a distance from the railway, where they have a long haul over the worst roads in existence.

32,978. If that price quoted to me was correct it would show even on your contentions, that some farmers were not farming at a profit?—Well I do not know that, because it was under those conditions that they began in Nebraska, and they have gone from nothing up to 80 million bushels in the year.

32,979. Your answer to that class of argument would be, that the expansion of wheat growing is a proof that there is an average profit all round?—That there must be; people do not go on from 250 million to 600 million bushels without some inducement to do it.

Relative cost of producing wheat in America and England.

32,980. You have in the draft evidence that you handed in a passage to this effect; that you predicted 34*s.* a quarter as being as good a price to the western farmer as 50*s.* in Mark Lane had been, and that therefore English rents must yield; have you formed any opinion yourself as to the relative cost of wheat production in the two countries, and what proportion of rent ought to be yielded in order to meet American competition?—I merely had then the impression, on the best information that I could get, that the no rent land would be brought so near to the high rent land by the reduction of railway charges that the rent would disappear; and that you would have to adjust your farming to new conditions, and to give up the old rotation series in which wheat was a necessary factor apparently.

32,981. Economically you think that in some cases the land ought to bear no rent at all; that in certain circumstances there is no economic rent obtainable from it?—Just so far as cheap bread to the multitude is of more importance than rent to the individual, I do think so.

The Farmers' Alliance.

32,982. There is one more question about America I should like to ask; and that is, supposing your contention of the reduction of mortgages and the general average of reasonable profits to the farmers in America is accepted, how do you account for the Farmers' Alliance movements and the other political movements in the United Stated based on agricultural depression or at least on allegations of agricultural depression?—The Farmers' Alliance covers but a small fraction of the great body of farmers; the rest go on minding their own business. These alliances are generally composed of the thriftless rather than of the thrifty, and they attain importance by the unfortunate methods of playing politics. We have not yet got wholly rid of the old issues of the war, or settled down to a real division on living questions, and in such a period the opportunity to play politics is one of the misfortunes of the country.

32,983. You do not think that the movement then has any real economic basis?—No, it is practically dead already; it is like the "know nothing" movement in Massachussetts and other States 30 or 40 years ago. There may be new phases of Populists, &c., but of no permanent endurance.

Registration of mortgages.

32,984. Are all the mortgages invariably registered in your experience?—Yes; they are not safe otherwise.

32,985. That is the law, is it?—It would not be safe for a man to keep a mortgage unregistered, because the property might be attached and his mortgage would become worthless.

32,986. Is it the case that money lending transactions are carried out; that is, that the money is lent to farmers in the Western States, on other securities than mortgages?—There are some chattel mortgages, but the chattel mortgages prevail in the South much more than in the West. Debts on book account, of course, exist everywhere.

Effect of chattel mortgages on agriculture.

32,987. Does that system of chattel mortgages prevail to a very large extent?—It has prevailed to a very large extent in the South in pledging the crop before it is planted, and has been one of the great difficulties in the progress of the South; but they are gradually surmounting that evil method.

32,988. Does not that amount to another and a large indirect method of crippling agriculture which, perhaps, you have not taken into account?—It does not cripple agriculture in a large way; it is now limited to the very small people, mostly to the ignorant negroes and very poor whites.

32,989. Still, that would have to be taken into account in addition to the mortgages, would it not?—Undoubtedly; but bear in mind that in the face of that the cotton crop has increased as rapidly as the wheat crop.

Agricultural depression in England.

32,990. (*Mr. Chaplin.*) I shall be glad to ask you some few questions, but I think I ought to say that owing, unfortunately, to the fact that we did not get your brief until two days ago, we have had very short notice of the fact that you were going to give evidence, and it has been almost impossible for us to do justice to

Mr. E. Atkinson. 27 July 1894.

so distinguished a witness. You are aware that we are suffering severely from agricultural depression in England?—There is a good deal of evidence of that fact, but I find also a good deal of evidence that many of your farmers are doing very well even now on land which is free from conditions.

32,991. Yes, but you are aware that this Commission, so distinct is the *primâ facie* case, has been appointed to inquire into agricultural depression in England?—Yes.

Monetary change and the fall in prices.

32,992. We are examining into the causes of that depression, and nearly all the witnesses whom we have had before us have agreed that the main cause of that depression is the great fall which has occurred in the prices of agricultural produce, and we are now seeking to inquire into the causes of that fall in prices. Several eminent witnesses who have been before us have attributed a large part of that fall in prices to monetary causes; but you do not share that opinion, I understand?—I do not. I have investigated every great staple of the United States either in agriculture or in manufactures, and I find the applications of science and invention entirely sufficient to account for the entire fall in every case, without going outside of those reasons to find some other cause.

32,993. I think you went so far as to say that you knew of no article of staple produce with regard to which the fall in price could not be sufficiently accounted for by other means?—I did say so; I mean by any line that I have been able to follow judicially.

Price of wheat.

32,994. You illustrated this by the case of wheat, which is an article of produce in which this Commission is very much interested. I think you said that in 1873 the price of wheat was 54*s.* a quarter, and that in 1887 it had fallen to 32*s.*?—Yes, those are the figures.

32,995. Now, as a matter of fact, it has fallen something like 23*s.* or 24*s.* as the market price in this country, I believe?—Yes.

32,996. (*Chairman.*) Do you know what the actual price of wheat is, or whether wheat has been sold as low as 20*s.* as has been stated?—I think in some instances there have been cases of that, but I doubt whether standard wheat has been sold at an average of less than 24*s.* or 25*s.* Is not the lower price for what we call "job lots"?

32,997. (*Viscount Cobham.*) There is the Argentine wheat?—Yes, and Argentine wheat has been sold at a lower price.

32,998. (*Mr. Chaplin.*) I wish to take the period from 1873 to 1887, to begin with——?—Will you allow me to continue for a moment? If Argentina can furnish you with first qualities of wheat at 19*s.* to 20*s.* permanently then my forecast of the potential of that section is justified and we shall stop; I do not think we can do that.

Fall in price of wheat in 1873-87.

32,999. Now, with regard to the evidence that you have given us, I propose to take the period from 1873 to 1887 to begin with, as I have said. You accounted for the fall from 54*s.* to 32*s.* in this way: you said 11*s.* was due to the reduction in the freight by rail to the seaboard; that 5*s.* was due to the reduction in ocean freight, and 6*s.* you ascribe to the decreased cost of production. Now I wish to ask you one or two questions to begin with upon the reduction of the freight by rail; you spoke of 1887 as being the year in which you wrote a pamphlet on this question, I think?—I did.

Reduction in railway rates on grain from Chicago to seaboard.

33,000. I have had the advantage of seeing that pamphlet; in that pamphlet you point out that it is necessary to show the changes in the condition of American competition since the years from 1870 to 1873, and then you go on to say this, to which I want to call your attention: "The first consideration is to "be given to the reduction in the railway charge for "moving produce from Chicago to the seaboard, a "little less than 1,000 miles. This reduction has been "on the average traffic a little more than one cent "per ton per mile, comparing the rates of 1870 to 1873 "inclusive with those of 1883 to 1886 inclusive." Now a little more than a cent per mile I think in bushels over a thousand miles would represent this price, would it not—you will correct me if I am wrong; one cent per ton per mile for the thousand miles, of course, is a thousand cents, equalling 10 dollars per ton, or at 33⅓ bushels to the ton it is 30 cents per bushel, or 10*s.* per quarter?—I daresay that is the correct computation.

33,001. I daresay that is the correct computation?—I have taken 33⅓rd bushels per ton from your own pamphlet, in another part of which you speak of a ton as one ton of 33⅓rd bushels of 60 lbs. each?—Yes.

33,002. Then we arrive at this, that on that calculation of 1 cent per ton per mile it would be 10*s.* per quarter?—If your figures are correct.

Quantities of wheat transported by water and rail from Chicago to seaboard.

33,003. A little more than 1 cent per ton per mile would make the reduction even greater than 10*s.* a quarter. Now I want to ask you this question: in the years 1870 to 1873, is it not a fact that the wheat came mainly by water to the seaboard?—The larger part came by rail. I would like to state to you that after those figures were made they were very carefully verified by reference to the authorities of the New York Central and Hudson River Railroad, and by reference to the owners of lines of steamships, and that I took exact data also of individual shipments from merchants.

33,004. Of course, it has been very difficult to get the official statistics in America at such very short notice, but I have done the best I could instead, and I have taken two extracts from the "Economist" newspaper, which is, I believe, a great authority on these subjects?—Yes.

33,005. They are extracts which they attribute to the Bureau of Statistics in America. The first paper that I am going to refer to, which is dated June 21, 1873, and is to be found on page 761 of the "Economist," it gives the shipment per week for two different weeks and I have compared several of the weeks as follows:—Lake shipments for the week 967,830 bushels; on the canals, 714,000; and on the railway, 284,000. Then I have taken another week, October 11th, 1873, which gives for the Lake shipments, 2,791,499; on the canals, 3,500,000; and on the railway, 602,000. If those figures at all represent the fact, or are at all accurate, it would look, I think, would it not, as if the greater part of the shipments came by water and not by rail?—No. In some of the tables, which I accidentally left yesterday, intending to put them in, you will find the exact data of the variation in the cost of moving a bushel of wheat by water, by lake, and by rail.

33,006. First of all we want to get at the amounts which are sent by rail?—Then you must go to the statistical abstract. I would simply put in the one general statement that the loss of time, the transhipment and other factors in the movement of wheat by canal are so important that the railway line has steadily beaten the canal. Then, of course, the canal is only open a part of the year. The Erie canal is run free of tolls by the State of New York at an annual cost of nearly 700,000 dollars, paid in the taxes; the New York Central Railroad pays taxes within the State of New York to about the same sum, and yet there is a constant and steady gain in the wheat that moves by rail and the time may come, in my judgment, when the water will be drawn from the canal and rails will be laid in it as they contemplate in some other canals in the United States.

33,007. Yes, but as I explained to you, it has been impossible for me, within the time to get the official returns with regard to the amount of traffic by water and by rail as early as 1873?—You will find that all in the statistical abstract I think.

33,008 Those returns that I have seen for certain particular weeks, as quoted in the "Economist," undoubtedly give an immense preponderance to the traffic by water?—I daresay.

33,009. But you are not able to give us the figures now, contradicting them and establishing the fact that the greater part of the traffic was by rail?—I do not give you the figures, I give you a citation of the authority by which you can get them without any difficulty.

33,010. That will require to be verified?—And that will require time.

33,011. Can you tell us at all what proportion went by water and what proportion went by rail?—I do not carry those figures in my head.

33,012. It is extremely important because now I am going to the question of what the freights were by water?—You will show an apparent less cost by water than I show in that pamphlet, but there you leave out of view the delay, the loss of interest, the insurance, and a good many other items. The canal is so unimportant a factor as compared with the rail that I disregarded it entirely in that analysis.

Mr. E. Atkinson.
27 July 1894.

Water freight rates on grain from Chicago to New York between 1870–73 and 1883–86.

33,013. Now I find—this is taken from the statistical abstract of the United States for 1893—that the freight rates for grain from Chicago to New York in 1873 per bushel by water were 19·19 cents; are you aware of that?—I know that there are such figures in that abstract, but I do not remember that particular year.

33,014. Those are the figures given for that particular year?—What year are they in—1892?

33,015. I have not got the figures for 1892, but I have taken the figures which you put in the paper?—I may state that in 1892, they were, at times, something less than 10 cents, I think.

33,016. We are dealing now, if you please, with your statement of the comparison between 1870–73 and 1883–86, and I should like you to keep to that first, in order to avoid confusion. According to this statement it shows that the freights by water were 19·19 cents, we will call it in round numbers 20 cents, and that would represent 6*s.* 8*d.* a quarter?—Yes.

33,017. Now I want you to explain, with regard to the wheat which is brought by water, how it is possible there can have been a reduction of 10*s.* or 11*s.* a quarter when the whole original freight was only 6*s.* 8*d.*?—It would be very difficult to explain it unless you go back to the origin of the wheat. I would simply state that those figures have been contested a good many times, and that they have been verified a good many times. (*The witness when correcting his evidence wished to add the following words.*) *My computation of a reduction of* 11*s. per quarter covers not only the distance from Chicago to the seaboard, but also the movement of the wheat* 400 *to* 500 *miles from its source to Chicago.*

Rail freight rates in grain from Chicago to New York between 1870–73 and 1883–86.

33,018. Now I will pass on and take the freights by rail in 1873. The freights given in the statistical abstract of the United States for 1873 of wheat from Chicago to New York are 33·2 cents equal to 11*s.* a quarter; according to your statement in this pamphlet, the reduction was 10*s.* or 11*s.* a quarter; are the railways carrying for nothing, and were they carrying for nothing in 1887?—Not at all. (*The witness when correcting his evidence wished to add the following words.*) *The reduction from Chicago to the seaboard had been greater than on lines west of Chicago, but on those western lines it had been large. If you wish to verify the statement you must cover the whole distance, say* 1,500 *miles on the average.*

33,019. Then can you reconcile the discrepancy in the statements?—I should only have to refer you back to the actual facts of the New York Central and Hudson River Railroad, and on lines west of Chicago by which those figures were verified.

33,020. These are the official figures from the abstract of the United States; they put the freight by rail at that time in 1873 at 33·2 cents per bushel, which is equal to 11*s.* a quarter; you state that between 1873 and 1887 there was a reduction in freights by rail of 11*s.* a quarter; that would leave in 1887 no charge at all for freights?—My one reply is that my facts are taken from the actual traffic returns of the railways which did the business, and from the merchants who conducted it.

33,021. However, if these figures are correct as given in the statistical abstract of the United States the reduction that you have laid before us would be impossible?—Apparently so. (*The witness when correcting his evidence wished to add the following words.*) *Apparently, but not really, because they only cover a part of the distance.*

33,022. Then it is clear that if these figures from the Bureau as to freights in 1872–73 are correct, your statement as to the reduction in freights between those years and 1887 must be in some way mistaken?—There were additional charges which you have not taken into consideration. I am unable here to go over the matter again.

33,023. (*Chairman.*) Were your figures the averages of 1870–73?—They were averages.

33,024. For 1870–73?—I have no doubt you can find particular times when there was a contest among the railroads, when they did carry wheat almost for nothing. But those figures which I have given are taken from actual facts. That is another case of the necessity of checking off great averages or apparent averages by the actual transactions themselves.

33,025. (*Mr. Chaplin.*) I think I may state in support of the figures that I have used that I obtained them from the Director of the Statistical Department of the Board of Agriculture after your evidence was completed last night. As regards wheat do you still adhere to the opinion that you have given as a reason sufficiently accounting for the great fall in the price between those years, apart altogether from any questions of monetary causes?—I adhere to it distinctly.

Mr. E. Atkinson.
27 July 1894.

33,026. In spite of this apparent grievous error as to the freights?—I do not admit the grievous error at all, because when I got home, after I made that statement, and verified it from the books of merchants, I found that I might have said that the American farmer would get as much out of 28*s.* a quarter as he had previously out of 50*s.* I verified it from the books of the transactions themselves. (*The witness when correcting his evidence wished to add the following words.*) *As well as the railway figures covering the whole distance of about* 1,500 *miles to the seaboard.*

Fall in freights in recent years.

33,027. Now to come to later periods; taking the price of wheat at the present moment at 23*s.* 9*d.*, which is the official quotation which I have just seen, there has been no great fall in the freights quite recently, has there to account for that—within the last two or three years?—I have not looked into it for the last two or three years.

33,028. There has been a very great fall, as you know in wheat in the last few years?—Yes.

33,029. It has fallen from something like 30*s.* to 23*s.* 9*d.*?—I think there has been as great a reduction in other factors affecting wheat.

33,030. There has been no corresponding fall in the price of freights?—I have made no private investigation during the last few years. In anticipation of coming here I wrote to a correspondent in Minneapolis to trace a lot of wheat transactions through from Minneapolis to Liverpool at the present time—I mean actual transactions; if that paper comes, I will put it in at a later date.

Improvements in production of wheat in recent years.

33,031. Now with regard to the lessened cost of production, there have been no special improvements in machinery for reducing the cost of production within the last three or four years, have there?—There has been a very great lessening in the cost of machinery, and I think there have been a good many improvements in handling and milling, and packing, each minute in itself, but, as far as I can learn, of considerable importance in the aggregate. Every branch of work is now on a small margin.

33,032. Sufficient to account for the fall in the price?—No. I admit that there has been a fall in the price since the 34*s.* which requires an explanation other than the improvements in production and distribution; there has been a fall in the price of everything to the great benefit of the consuming community except in meats which are about as high as ever on a gold basis.

Effect of monetary changes on prices.

33,033. You adhere then to your view that the change in prices is not due to the appreciation of gold, and that it has nothing to do with money causes?—I do; I think that the fluctuation in silver in India, and in paper in South America adds a little to the cost of the merchant in importing; he has to insure himself against these fluctuations.

33,034. You admit, of course, that there has been recently a change from a high to a low level of prices?—I do not admit a general or uniform change; I admit great variations in price and a general tendency to lower prices, but as I have said, some articles are higher now than they were in 1870, notably coffee and many kinds of timber. In our country many articles of handwork are now higher on a gold basis than they were in 1870.

33,035. Quite so, but with some exceptions which I equally admit, and on which I entirely agree with you, you would say that there has been a general tendency to a change from a high to a low level of prices?—A tendency that way is shown in all the tables, but I do not accept the average of all prices as of much importance. I want to go to each particular article.

33,036. Are you of opinion that prices are affected by an expansion or contraction of the supply of money?—They are affected by an expansion or contraction of money that is of legal tender.

33,037. I am speaking of money in that sense?—Yes, undoubtedly prices were enormously inflated by our paper legal tender currency.

33,038. But in this case this tendency to a change is not due, in your opinion, to the contraction of money?—It is not, in my opinion, since 1879 when we resumed on a gold basis.

33,039. We have had some evidence upon that subject from other witnesses which I should like to put before you, and to ask whether you adhere to that

Mr. E. Atkinson. 27 July 1894.

opinion in the face of it?—I am quite familiar with that view of the so-called bimetallists whom I call bi-legal-tenderists.

33,040. Yes, but I am going to quote, with your permission, the opinion of a very eminent and distinguished, perhaps the most distinguished, mono-metallist in this country?—Mr. Giffen?

33,041. Yes, you have named him rightly. Speaking on this subject in 1888 he said, "It would only vary "the language a little to substitute for the phrase "'contraction of money' 'increased cost of production,' just as it would be to substitute in the opposite "case 'lowered cost of production,' in both cases "relatively to commodities." "It appears to be "possible, however, to go farther, and to point out "that by comparison if we attend carefully to the "terms of the comparison we can say positively that "the recent change from a high to a low level of "prices is due to a change in money of the nature or "in the direction of absolute contraction." You do not share that opinion?—That is about the only point on which I ever differed with Mr. Giffen. I know all about that, and I do not fully concur with him in that. I find that the great change brought about in commercial methods by the telegraph, by the Suez Canal, and by the greater use of instruments of credit, has more than off-set the apparent contraction of money metal, and that there is rather a plethora of gold in sight than a scarcity.

33,042. (*Mr. Giffen.*) Might I ask you at this moment whether your attention has been called in that passage which Mr. Chaplin quoted just now to the phrase, "If we attend carefully to the terms of the com-"parison," it is a question of exact language to some extent, is it not?—Yes.

33,043. I ask the question because I do not believe that you would have differed in your opinion from me if you had observed the language which I used?—I confess that I am more familiar to-day with what has been imputed to you in this discussion than with my reminiscences of what you actually did say. But there has been a little difference in my mind and in the minds of Horace White and of some of our other so-called mono-metallists, who are really single standard men, and not mono-metallists; there has been a little difference between us and you for some time, I think, on what we understood you to have said.

Increased purchasing power of gold.

33,044. (*Mr. Chaplin.*) You admit, however, I understand, that the purchasing power of gold has increased; I think you have admitted that in your evidence here?—The purchasing power of gold has increased unquestionably in respect to most articles.

33,045. That, I understand, in your opinion, is due to causes affecting commodities such as increased production, and is not due to any change in the value of the money itself?—There you are correct.

33,046. That is your view?—That is my view.

Production of commodities and increase of population.

33,047. When you talk of the increased production do you mean over-production in proportion to the demand?—As we say on our side, I always kick at the term "over-production," The world wants everything that we can make if we can only distribute it.

33,048. (*Chairman.*) Over-production means plenty?—Over-production means plenty, but as commonly used it merely means a little congestion at some particular point where some lack of credit or a high tariff, or some artificial obstruction stands between the producer and the consumer.

33,049. (*Mr. Chaplin.*) What proof is there, or what proof can be advanced that in proportion to the increased population and the requirements of the world there is any increase in the production of the commodities; how can you show that the commodities have increased at a greater ratio than the population and the requirements and the necessities of the world. The increase in population is something gigantic, is it not?—I think not. I shall have to send you a Commencement Address in which I dealt with the thesis of "Con-"sumption limited and Production unlimited in its "potential." I have taken no stock in the conception that the tendency of population is to increase more rapidly than the means of subsistence. It never has been true since it was uttered. It is not true to-day, and in view of the recent discoveries of science in respect to the matter of food, it is not within the thought of anybody.

33,050. (*Mr. Giffen.*) Is it true of India?—It may be true of certain limited districts in India, but there is less hunger in India to-day than there was before the railroads were built. You had your famines simply because you had no means of communication. You had abundance in one place and scarcity in another.

Mr. E. Atkinson. 27 July 1894.

33,051. (*Mr. Chaplin.*) Are you able to tell us what the increase of population in the world has been, say, within the last 20 years?—We have a sort of approximate idea from the different censuses, they are fairly near.

33,052. The increase may be a very great deal greater than the estimates given in these censuses?—I do not know; I suppose we are as close to the facts in the United States as you are in Great Britain. What the check to increase is I do not know, but there is a retardation in the increase of population even in the United States.

Effect of expansion or contraction of money on prices.

33,053. Now with regard to the effect of expansion or contraction of money on the prices of commodities, I am going to ask you another question. You referred us in the course of your evidence to Adam Smith; I may remind you that he computed the price of wheat during the interval between 1202 and 1597, both inclusive, and to show the variations in value he separated the 395 years into seven divisions, and he reckoned the average for each. Those divisions began with the period of 1202 to 1286, and they ended with the period of 1561 to 1601. For the purpose of what I am going to ask you, I think it would be sufficient to take the three last periods. In the period from 1453 to 1497, the price of wheat was 14*s.* 1*d.* per quarter; from 1499 to 1563 it was 10*s.* $0\frac{5}{12}$*d.* per quarter; and in the last period, from 1561 to 1601, it was 2*l.* 5*s.* $7\frac{1}{2}$*d.* How is that great rise to be accounted for apart from monetary causes?—I am not learned enough in the history of that period, but I would like to put a question to you right here.

33,054. But it is for me to ask you questions, if you please?—Sometimes it is a good plan to put a question in rejoinder.

Effect of discovery of Potosi silver mines on price of wheat.

33,055. You will remember, probably, that the silver mines of Potosi were discovered in 1545, and that they created an enormous expansion of money?—Undoubtedly.

33,056. Would you dispute that that was the cause of the rise in the price of wheat then?—I should have no doubt it was a large factor in it. I am somewhat familiar with that period, and with the effect of those additions, but I do not remember dates.

33,057. Do you remember what Adam Smith said about it himself?—Not particularly.

33,058. I will quote it, because I think it is desirable that it should go upon the notes, and then I will ask you whether you agree with it. "From about 1570 to "about 1640, during a period of about 70 years, the "variation in the proportion between the value of silver "and that of corn, held a quite opposite course. The "discovery of the abundant mines of America seems "to have been the sole cause of this diminution in the "value of silver in proportion to that of corn. It is "accounted for accordingly in the same manner by "everybody; and there never has been any dispute "either about the fact, or about the cause of it." Would you be disposed to agree with the opinion that this great rise in the price of wheat at that time was entirely due to monetary causes?—I should not agree that it was entirely due, but I would agree that it might be. I should want to know all the other circumstances. Adam Smith was a true observer.

33,059. Then I want to ask you this question: if so great a change in the price of wheat at that time was due to monetary causes then, is there anything very unreasonable on the part of bimetallists in supposing that a great change in the price of wheat now may be due to monetary causes again?—In reply to that question I would say that I should call upon the bimetallists to take into consideration the fact that there has been as great, and, proportionately, a greater addition to the supply of gold in use in the world since 1850 relatively to silver as there was at that period in the supply of silver relatively to the previous quantity of money; and that if the additional quantity of silver money had the effect that you hold that it had, you then prove a depreciation of the power of silver in reference to wheat. Now I hold that the big addition of gold, since 1850, has either saved us from a much greater fall in prices or has had the effect in respect to the monetary metals that the supply of silver from Potosi had at that period. That is the point I want to

Mr. E. Atkinson. 27 July 1894.

get in. If that additional supply of silver was a monetary cause of the rise in price at that time, then the huge addition to the quantity of gold since 1850 may have been a cause of the maintenance of price higher than it would otherwise have been in this latter period. The question which I wanted to put to Mr. Chaplin was this: taking those prices of wheat at that time and the present prices, do we not find a depreciation both of gold and of silver at the present time with respect to the value of wheat, in other words, if gold had not become more abundant since your funded debt first took its rise in the time of William the Third, what would be the present burden of your National Debt of Great Britain?

33,060. No doubt if you cease to discover any more gold or if you stop the entire coinage of gold you might increase the burden of the debt to any extent; but upon the same argument that you have been using, is it not reasonable to suppose that the great dislocation of silver which occurred when the various mints were closed on the Continent, and when the mint was closed in America may also have had a great effect upon prices?—I do not find it—I find it has increased the cost of doing business, and I find that the export of cotton goods from Lancashire has increased to India, and that you have got a larger return in wheat or in something else.

33,061. When the mints of the United States were open to the free coinage of both gold and silver those metals both performed all the same functions of money, did they not?—The silver dollar never circulated; it went to France and was melted down into 5-franc pieces as fast as it was issued from the mint prior to 1873; it never had any effect upon the monetary condition of the country.

Effect of demonetisation of silver on prices.

33,062. You are not prepared to admit that what I call the great dislocation of silver had any effect at all upon prices?—I think it has had an effect in making commerce much more complicated and in increasing the cost and difficulty of doing business.

33,063. Has it had any direct effect in lowering prices?—I do not ignore the silver difficulty, especially in India—all I hold is, that the gold standard is asserting itself in spite of legislation, and in spite of treaties, and that even if you did get what you call a bimetallic treaty——

33,064. I will come to that question afterwards, if you are going to talk about the gold standard. I should like first to have an answer to this question, whether you admit, or whether you deny, that the dislocation of silver has had an effect upon the prices of commodities either directly or indirectly?—It has had a slight effect in rendering commerce or the exchange of commodities more complex. I do not think that it has had any appreciable or permanent effect upon the price of wheat in England.

33,065. If it has had no permanent effect then it may have had a temporary effect?—A very short temporary effect.

33,066. When you say very short how many years do you include in that?—A few months.

33,067. You think the indirect effect of the dislocation of silver has only been felt then, for a few months, upon the price of wheat?—It has had a very slight effect you may say on each particular harvest for a short period, and then the commerce of that year adjusted itself to the ratios and went right on.

33,068. Then it has a recurring effect each harvest?—A little bit, just like any other variable factor; just like the element of insurance.

33,069. At what date do you put the commencement of this effect, which was the first harvest which was affected?—I never attempted to place it; in other words my judgment is that if you had not received any wheat from India, you would have received an increased supply from the United States, and the price of wheat would have been substantially the same as it has been even with the Indian import.

33,070. Then it practically comes to this; that in your opinion it has had hardly any effect either directly or indirectly?—Hardly any effect directly or indirectly except in rendering commerce more complex and in disturbing all your East Indian relations among yourselves. That is a very difficult subject for you, but we do not propose to take any hand in it.

Condition of farmers in the United States.

33,071. On that I will ask you some questions presently. I think that is what you closed your brief with. I want now to take you to another question upon some extremely interesting information which you gave us, although it certainly differs very much from the information I had previously received; that is on the question of the general condition of the farmers. You gave us the acreage of land which is held as farms, at 623,000,000 acres, and I understand you to say that the general condition of those farmers, where they understood their business, is prosperous?—Fairly, until the present year, and among the farmers in the present year there is the same difficulty as among the merchants. In the general commerce of the country when the panic came on, the farmers could not sell their produce, the merchant could not make his collection, the distant merchant could not make his remittance to the manufacturer, and the manufacturer had to come to the banker and get carried over; but there was very little bankruptcy among the commercial men. There have been hardly any failures of any importance in the United States during the whole year, and the principal dealer who failed has since paid 100 cents in the dollar and has resumed. It would not be worth a quarter of 1 per cent., or 25 cents. on each $100 of sales to get a guaranty of prompt payment on our internal wholesale traffic. Losses by bad debts on true commercial transactions, are, and have been for years, very trifling. You must draw no conclusions about regular commerce from the fluctuations in the stock market.

33,072. With the exception of this last year which, you have told us all throughout, you put aside altogether—— ?—Yes.

33,073. Up till then the farmers have been practically prosperous?—Farming as a whole has been practically prosperous.

33,074. Then are all these stories that we hear about the bankruptcies of farmers and the numbers that are being sold up misleading?—They amount to no more than the ordinary fraction of ill-success which affects any business, and the evidence of that is conclusive in such reports as those I have here from the State of Minnesota and from South Dakota. The proportion of foreclosures of farms steadily diminished in those two wheat growing States between 1880 and 1890 down to the beginning of the panic year. In Minnesota the chief of the Labour Bureau of Statistics estimates (and gives the facts) the improvement in respect of foreclosures at 85 per cent. during that period.

33,075. (*Chairman.*) You said down to the beginning of the panic year, which is that?—The beginning of the panic year I call April 1893, or from the end of 1892. I have his statement here, if you want to look it over.

33,076. (*Mr. Chaplin.*) Now I want to ask you a question as to the reliability of statements with regard to farmers in a New York paper which is called the "New York Sun." Is that a considerable paper and well informed on agricultural matters?—I would rather not answer that question.

33,077. I wish to ask you whether you agree with this statement in the "New York Sun," which is written on September 10th, 1893:—"As the prices of "farm products have fallen, so has declined the "purchasing power of that great body of producers "constituting nearly one half the working force of the "nation, and so has waned the prosperity of all. For "more than 15 years, from 1878 to 1893, all the great "primary agricultural staples have been declining in "price, although there have been periods when the "price of some one was high for a limited time." ". . . . "In the meantime there has been no "material reduction in the cost of production, the "self-binder, the gang-plough, mower, hay tedder, "and hay loader, and all other great improvements in "agricultural machinery having come into use prior "to 1878. While the cost of production cannot have "been lessened as much as 5 per cent. since 1875, "prices for the staple products of the farm averaged "82 per cent. greater during the five years ending "with 1875 than now. This is especially true as "respects the five staples: corn, wheat, oats, hay, and "cotton, which employ 195 millions out of the 206 "million acres now devoted to staple crops." What I want to ask you is whether that opinion and that extract at all shake your views as to what you describe as the general prosperty of American farmers up to the beginning of 1893?—I differ with it in general and in detail. I think the statements are erroneous in many respects, and the very point of all my evidence is to disprove exactly that sort of rubbish.

Mr. E. Atkinson.
27 July 1894.
Mortgages on farms in the United States.

33,078. With regard to the mortgages, I understand you to say that the mortgages upon these 623 million acres amounted to about 1,000 million dollars?—I put in the official data, which I consider conclusive on that point.

33,079. Official data up to when?—In the year of investigation.

33,080. Which year was that?—It is the year 1889. I am going to leave all these papers with you to study at your leisure. This is official matter which gives the conclusion of the mortgage investigation, and which has not yet been published. It was put into my hands at my request, just before coming over, by Mr. Carroll D. Wright, the present superintendent of the census, but I did not myself have time to go through it.

33,081. I have been supplied with some information on this subject on which I want to ask you some questions. I understand you to say that they are suffering no severe depression from the mortgages upon their farms?—That what?

33,082. That the farmers are not suffering severely from the fact of their farms being mortgaged?—Taking the 22 typical States with 68 per cent. free of any mortgage, how can they be?

33,083. You do not consider the indebtedness of the farmers heavy now?—I think they are the most independent class in the United States, taking them by comparison.

33,084. (*Chairman.*) I suppose you are confining your evidence up to the beginning of 1893?—The evidence which I have procured since from specific States is the same down to the panic.

33,085. You speak of the difficulties of farmers about their mortgages, because, I presume, that in consequence of the depression of this year, those farmers who are mortgaged would find a difficulty in paying their interest?—This year I have no question that they have to delay their interest, just as they delay their payments, just as the tradesmen delay their payments, and just as we have all been embarrassed in tiding over this wretched panic which had no cause in the nature of things.

33,086. You confine your observations upon this point up to 1890, do you?—I have said that I have subsequently written to the bureaus of statistics of separate States, especially of Minnesota and South Dacota, which are great wheat producing States, and that their testimony is that subsequently to 1890 and down to 1892, the liquidation of mortgages proceeded with somewhat accelerated speed down to the date of the panic.

33,087. Previous to that you described the indebtedness of the farmers as not being heavy at all, and you say they were a most independent class?—If the facts that I have quoted are as they are stated, it seems to me that that is obvious, and these individual letters, which I confess will of necessity be *ex parte*, because they are from the men selected as thrifty farmers, go to sustain that view by individual evidence. If you look over some of these you will see that they bear testimony to themselves and to their neighbours.

33,088. Are you aware that a sub-committee of the United States Senate was appointed in March 1893, to inquire into the condition of agriculture?—I think I have heard of it.

33,089. They inquired and they made a report, and I have before me some extracts from that report bearing upon the condition of the farmer, which appears to very greatly contradict your evidence. I should ask your permission to read it: "The indebtedness of "farmers has been and now is very heavy. The "census reports for 1890 are not completed, but "enough has been given to the public to show that "the aggregate is almost incomprehensible." Then they go on to say, "From 1880 to 1890 an immense "indebtedness was incurred by the farmers of the "United States, and a large part of it was in renewal "of obligations incurred years before. This was simply "moving their old debts ahead—the same principal, "the same interest. The aggregate debt of farmers "still due on the 1st day of January 1890, though the "reports are not all tabulated, was about 2,250 million "dollars." When you told us that their indebtedness was a thousand million dollars, that referred only to the present time, I suppose?—That referred to this official data, and to the evidence of the compilers which is all in this pile here. If you include the acres you must bear in mind the distinction between mortgages on acres and mortgages on true farms, which are occupied and worked. The mortgages on farms and acres, so many of which are suburban and held for speculative purposes, are over 2,000 million dollars, but the analyses of the authorities of the census, under Mr. Wright, have brought the mortgage on true farms down to about a thousand million dollars, and I call it 1,300 million dollars in order to be safe. The evidence is all here, and you can take it just for what you think it is worth. Now when you speak of thousands of millions that raises a vague question, but when you bear in mind that the average mortgage is only a thousand dollars on a farm worth 3,200 without the stock and tools, it does not appear to be a very important matter. I am prepared to admit that one third part of the territory of the United States went through the mortgage mill between 1880 and 1890, and that the total amount of mortgages of all kinds was 12,000 million dollars, and is now 6,000 million dollars. Well, what of it? There are 70 million people, and each mortgage is a trifle. The mortgage on the City of New York and the 10 adjoining counties, on city real estate which is easily carried, and which furnishes capital at a low rate to those who do business, exceeds the entire mortgage on all the farms in the United States. Here is a map which shows 43 per cent. of the mortgage indebtedness in half a dozen different places. I should like to know who reported that which you have read, and then I would tell you how much weight I would give to it. There has been a great deal of talk about that.

Mr. E. Atkinson.
27 July 1894.

33,090. This is a report of a sub-committee of the United States Senate appointed in March 1893 to inquire into the condition of agriculture?—Who were the members?

33,091. That I cannot tell you, I have not had time to ascertain that?—When you tell me who the members of that committee were I will tell you how much weight I would attach to it. If Senator Peffer and his kind were on it I should not attach much weight to it. I am afraid I must go now to keep an important engagement that I have; but before I go I will withdraw from my papers two more of my graphical tables which give the results of my own investigations, not official, but which the official diagram verifies. These give the variations in prices and wages as indicated by that multiple standard from particular establishments secured mainly by myself, and showing rather less improvement than the official figures. One is based on 1860, one on 1865, and the other one on 1870. They are on that particular multiple standard.

33,092. The report goes on to say: "So heavy a burden "on land, and especially during a period of falling prices, "cannot but be depressing. The average situation in "this respect was fairly expressed concerning the farm "lands of New York by the State assessors for that "State in their report to the Legislature under date "February 3, 1890. Among other things the assessors "say: 'There continues to be a marked depreciation "'in the value of farm lands in nearly every county, "'and the depression among farmers continues while "'the prospect for improvement is not good; many "'assert that after paying expenses they cannot realise "'from their farms sufficient to pay the interest on "'the mortgage against them, and consequently "'thousands of farms are falling into the hands of "'mortgagees.'" You do not agree with these statements?—The State of New York has suffered much more than the Western States. That is partially true, but it is to meet exactly that kind of statement that I have gone to the pains of making this analysis. I will venture to say that the committee which made that report would represent the ideas of the free coinage of silver and of cheap money lunatics, and was appointed at their instance. That is just what I should expect from them; that is what I am trying to meet at home, and that is the reason why I did all this work, not for you, but for use in the United States.

33,093. But still not being aware at present of the names of the gentlemen who composed the committee, that is only a speculation on your part?—It is only speculation on my part, and I admit that if you deal with the mortgage question by thousands of millions, you can make it appear as big as you want it; but when I cypher it down to a thousand dollars a farm and only 32 per cent. of the farms mortgaged, on that it does not appear to be so big.

Mr. E. Atkinson. 27 July 1894.

33,094. I think it was you yourself who gave us the estimate of a thousand million, or rather 1,300 million dollars for which the farms were mortgaged?—And I carefully gave you the number of farms, it is a little trifle on each.

Mr. E. Atkinson. 27 July 1894.

Adjourned for a short time.

Condition of farmers in the United States.

(*The Witness.*) I would like to say to Mr. Chaplin, before he begins again, that I think on consideration that four men out of five, perhaps nine out of ten Americans who might come here, and who would have that statement of the "New York Sun" submitted to them, would say that they believed it to be substantially consistent with the facts; that is the general impression.

33,095. (*Mr. Chaplin.*) Four men out of five?—Four men out of five will tell you that they think that that was substantially consistent with the facts. I beg to say that the impression of great suffering and depression on the part of the Western farmers prevails in the Eastern part of America to almost as full an extent as it does here, and that that is in my judgment a superficial view of the matter. I am one of the few men who have attempted to get at the bottom of it, and you must take my conclusions for just what they are worth. You will never satisfy yourselves fully until you pick out a first rate man of judicial mind who can go through the country and take his own observations on your own account.

33,096. Then I may take it from you that on your own admission in your views as to the prosperity of American farmers, you differ from the general opinion altogether?—I differ from the general opinion of my own people who have not examined the subject carefully, but who take a superficial view of which I take the "Sun" article to be an expression.

33,097. Then I take it that you would say that if we want to have the full expression of American opinion upon this subject of the prosperity of the American farmers, and the future of American agriculture, we ought to have witnesses on the other side as well as yourself?—I think it would be judicious. I try to give you, as far as I can, facts and not opinions.

33,098. When you say that people who hold this opposite view, as a rule have not endeavoured to get to the bottom of the case as carefully as you have done yourself, you would not apply that observation to the labours of this Committee of the Senate that I referred to, I suppose?—I am strongly suspicious that I should.

33,099. We should not as a rule hold that opinion of Committees appointed by Parliament in England?—I wish I were not obliged to express that judgment, but it depends wholly on the animus of the committee, and on who they are, and on whom they employ to do the practical work, whether you can accept a mere committees' report or not. In such a case as this it is very apt to be the fact that the promoters of a single idea or a peculiar idea, form a majority of the committee, therefore every real student looks up the personal equation or bias when dealing with a report. It is rather rare that a committee of both parties take such a course as the Finance Committee of the Senate did in delegating the investigation of wages and prices to Carroll D. Wright to be done in an absolutely judicial way. I admire the thoroughness of your Parliamentary work, and we hope we shall equal it. But I should want to know exactly who the men are and what their real capacity is on that committee before I would express a confident opinion about their conclusions.

Effect of restoration of specie standard on prices and wages in the United States.

33,100. As I stated before, I received this information so hurriedly that I have not yet had the time to make that inquiry, or to ascertain that. Now with regard to another subject I think you have told us in your examination in chief that the effect of the gold standard since 1879 had been to lower prices?—I think I hardly said that the effect of the gold standard had been to lower prices, but that since the adoption of the gold standard there had been a continuous tendency to a fall in prices, not as great as that which preceded the restoration of the specie standard between 1865 and 1879 in the United States, and that there had been as steady and continuous a rise in wages.

33,101. You certainly said that there was a rise of wages at the same time; but when you say that the fall in prices since 1879 had not been as great as the fall which preceded it, what years are you speaking of?—What I mean to say is that the fall in prices between 1865 and 1879 was very much greater, as is indicated by that chart, than the fall in prices subsequent to 1879.

33,102. (*Mr. Giffen.*) The fall in prices between 1865 and 1879 was a fall in paper prices, was it not?—Unquestionably. I am dealing with the paper fluctuations throughout, because I think the lesson is the more important. From debased and depreciated paper we reason on the effect of low priced and depreciated silver.

33,103. (*Mr. Chaplin.*) You also, I think, went on to say that the standard had resulted in lower prices and higher wages which were its complement?—I did not quite state that. From 1860 to 1865 prices rose in the United States on the debasement or discredit of the currency. Wages also rose but not as much. The workmen suffered. After 1865 prices fell rapidly, wages less. In 1879 we resumed. Prices fell moderately. Wages rose steadily. Under a gold standard the workmen throve greatly. From 1879 to the panic of 1893 capital increased rapidly while the margin of profits diminished, but the workmen gained absolutely and relatively, securing year by year, subject of course to temporary fluctuations, an increasing share or proportion of a constantly increasing product. That is true progress.

33,104. What I was going to ask is this: surely the price of wages is an important element in the cost of production, is it not?—It is an important element in the cost of production in this respect, that in proportion to the effectiveness of the labour the wages will be very high and the cost will be very low per unit of product. I do not regard low prices and low wages as at all corresponding terms, but, on the contrary, I regard high wages as the resultant or derivative of a low cost of production. And that is the peculiar advantage that we claim for the United States, that we have in almost every important article of commerce an opportunity to make the produce at the lowest cost per unit of product, with correspondingly the highest rates of wages that are derived from the sale of that product anywhere in the world.

Course of wages in the United States.

33,105. Have wages begun to show any tendency to fall at present in the United States?—There have been a few attempts to reduce wages in specific occupations during the panic; nearly all those wages have been restored. The course of wages has been variable, but on the whole there was no general reduction, even during the panic, it was rather a loss of the occupation for the time being than a reduction of wages.

33,106. Where there has been an attempt to reduce wages it has generally resulted in violent opposition, sometimes taking the form of strikes, has it not?—Yes.

33,107. And those strikes have resulted in the maintenance of the wages?—Not always; they sometimes resulted in the stopping of the operation entirely, or if the circumstances had changed so that there was a market for goods then the wages have been restored.

33,108. That is to say maintained?—I mean after having once been reduced they have in some cases been restored to the former level.

33,109. Am I right in supposing that in the cases you refer to if it had not been for those strikes, if wages had followed their natural tendency, they would have fallen?—I think not. I think there is no possibility of any general reduction of wages in the United States.

33,110. I am speaking of these particular cases where there has been the tendency to fall?—I think the strikes have merely made a little variation in what might have been the course.

33,111. You think the strikes have had some effect in maintaining wages?—Not in maintaining them. I think they are more apt to tend to a reduction in wages; rather more apt under such conditions as the present. There has been a moderate lack of employment.

33,112. How could they tend towards a fall when I understand the operation is this: there is a proposal to reduce the rate of wages on the part of the employer?—Yes.

33,113. That is met by a strike?—Yes.

33,114. Now if there had been no strike they would have fallen; how then does the strike produce the fall?—The strike results in the discharge of the striking body, and just at present in the rush of the unemployed to fill the places at a lower price.

33,115. And in that way it has produced a lower wage?—For the moment, there is no permanent effect of strikes either way in my judgment.

Agricultural wages in the United States.

33,116. I was given some information about harvest wages at the present time and 10 years ago; harvest wages given to the men who feed the threshing machine, that is to say, who carry the sheaves of corn to the threshing machine and put them into it, which, I understand, is as hard work as can be done by the agricultural labourer. I am told that the present price is 75 cents, or 3*s.* a day. Have you any information on that subject?—No direct information. There is considerable information on that subject in these letters which I have not yet digested.

33,117. Would you think that would be approaching to what was correct?—No; I should think that was very low indeed.

33,118. Then I am also told that the wages for that special work 10 years ago were more than double, or nearly 10*s.* a day?—I cannot say that it was not so, but all my evidence is the reverse.

33,119. You do not know upon that point?—My general investigation of the agricultural wages of common labourers is that while they have risen they have not risen in as great a proportion as in many other arts, and there has been and is still a scarcity of farm labour. I should interpose that the farm wages vary exceedingly in different parts of the country.

33,120. The wages vary exceedingly in different parts of the country?—Yes; if you go to the south you would find lower rates of wages in many departments among the negroes than those you quote, but the labour is not as effective.

Competition of India and America in wheat growing.

33,121. You stated in the course of your examination in chief that America was perfectly able to compete with India in wheat growing up till 1887, and that at that time you had ceased to regard India as an important factor; whereupon I asked you the question whether you still ceased to regard India as an important factor, and the Chairman thought the question had better be postponed. Now I will ask you the question: Do you still think India an important factor in competition with America in wheat growing or not?—I do not consider India an important factor basing my idea on the relatively very small quantity of wheat that can be produced in India under any circumstances near enough to railways to be moved, as compared with the relatively very large quantity that we can produce if we choose to. My own investigation leads me to believe that the area of land near railways in India that can be spared from millet, rice, beans, and other legumes which constitute the food of the people is not large, and that the wheat product has culminated until the railways are extended.

33,122. What has caused you to change your opinion?—Of the effectiveness of India?

33,123. I mean you ceased to regard India as an important factor in 1887; now you think she is an important factor?—No, certainly not. I no longer regard India as a very important factor for the reasons that I have given mainly derived from the Indian reports on agriculture and food supplies.

33,124. You adhere to the opinion then that you expressed in 1887?—I do.

33,125. Your opinion in 1894 is the same as it was then?—Substantially.

Production of silver.

33,126. I only wanted to clear that up; I did not quite follow it. Now I want to ask you, if I may, one or two questions with regard to the product of silver if you have no objection to answer them; I understand that you were examined before a Commission in New York in 1876 upon the production of silver, and you were asked this question: "Is not the yield of all "mines of importance a matter of public information "through the statements and reports of their superintendents or other officials, and is it not a fact that the increased production of silver during the past two years "has come almost entirely from the Consolidated Virginia and California mines of Nevada," and then to that you answered, "I am not aware of that fact; I should "question the evidence as to the total production of "silver partly on the ground of what I saw in the "Centennial Exhibition from Mexico;" and then you were asked a question, "What did you see at that Exhibition that led you to question the correctness of "silver-mining statistics," and the answer was as follows, and it is upon this answer I want to ask you for further information: "A very curious mass of "silver, thick in the centre and thin in the edge, as "if it had been cast in an earthen pan; it was afterwards explained to me how it was obtained, that there "were cliffs containing veins of metal against which "piles of combustible materials were placed and set on "fire, and the production was collected in what might "be called an earthen pan, and this was alleged to be "a rough production by this process. I at once inferred in relation to silver production that statistics "might be fallacious." Do I understand that that is your view of the way in which silver is sometimes obtained?—Decidedly not. In that report I am the victim of an unskilful gentleman of the reporting profession. That version of the testimony crops out every now and then, and I am very glad indeed that it has cropped out here, because you know how the lie travels much faster than the truth. There is an important omission in what I am purported to have said. And that omission makes it appear that I testified that the combustible material was piled up against the cliff, and melted the silver out of the cliff, which would be a manifest absurdity. What I did say was this, and what is true in some of the waterless regions of Mexico far away from scientific facilities—that there are cliffs or veins of ore in some parts of Mexico from which the ore is quarried, and then it is roasted on combustible materials right on the spot without furnaces or scientific appliances, and from that it is run into an earthen pan, which did give this curious mass of nearly purely silver of about that diameter (*illustrating*) thin at the edges as thick in the middle, showing evidence of the crudest methods. That is a very different thing from stating that the silver was melted out of the cliff itself.

33,127. The report in question was not correct?—The report is distinctly incorrect, and has been cited against me many times by men who knew that it was incorrect, in the attempt to break my evidence.

33,128. I have asked you the question, because it appears to me to conflict with other views which you have expressed on which I am anxious to ask one or two questions, and I wanted to have this clear; I only received this last night?—It was printed in the "Financial News" the day before yesterday in anticipation of my coming here, and with the object of breaking the force of my evidence, I suppose.

33,129. From that evidence, if it had been correct, I should have inferred that you were of opinion that there might probably be an almost illimitable production of silver if it could be obtained in that way. What is your view about the prospects of production?—At that time, when I did give that testimony, that and other evidence of the existence of what you may call an almost unlimited supply of the ores of silver in the remote parts of Mexico and in parts of South America, had given me a wrong impression as to the possibilities of the production of silver. I still think the ores are there but it costs too much to get the silver. I afterwards investigated that matter, and with the correction that I make that description of the art of obtaining silver is substantially true. But that deposit is far away in a waterless country, where even with that big supply of ore it does not pay to take it out any more than it does in Potosi or in some of our poorer veins or from our most refractory ores.

33,130. (*Mr. Elton.*) Can you tell the right honourable gentleman the name of the province?—I cannot remember.

33,131. (*Mr. Chaplin.*) You are aware that one of the objections that is frequently raised to the policy of the party who are called bimetallists has often been this: that there might be from America an almost illimitable production of silver, and consequently that that might upset and entirely vitiate any legal arrangements that might be made with the view of maintaining the parity or the ratio, whichever might be settled upon between the metals. You do not hold that opinion as to the prospects of illimitable production then?—No, I do not; and when I was making my report as Commissioner of the Government on Bimetallism in Europe, with which you are probably familiar, I recalled some of my rather fearful prognostics of a

Mr. E. Atkinson. 27 July 1894.

previous period, and, with the authority of the Secretary of State, I called on every geologist of any repute in the United States to give me an opinion on the future production of silver in the United States. All those reports are incorporated in that Government report, which has become the book of reference, not on my part of it, but on those geologic statements, and on the only correct translation of Soetbeer's "Materialen" that has ever been made, the translation made here having been very imperfect; so Dr. Soetbeer told me himself.

33,132. I am just going to refer again to a very short sentence from that paper which you read in 1889, for the purpose of having it upon the notes. I find that on page 20 of that pamphlet you expressed this view: "Do not mistake me, there are still and will "long be, rich silver-producing camps. . . . . "There is, and there will be, for a long time, a large "and healthy mining industry, and much silver and "gold will be produced; but from all I have seen and "heard, I think that the excessive silver production is "a thing of the past." Now I want to ask you with all your experience and researches and knowledge of that subject, if that paragraph still correctly expresses your opinions upon that question?—That paragraph still correctly expresses my opinions, and I should go a little further to-day, and say that at the present price of silver, a good many of the less productive mines and low grade ores have ceased to be worked; and on the other hand, on what I believe to be correct information, I understand that the owners of the more valuable ores in Colorado and Nevada, immediately after the cessation of the purchase of the United States, filled the shops in Chicago that make mining machinery with orders for improved machinery, in order to enable them to reduce the cost of production. My view has been, as you are aware, that silver has been depreciated by the extreme abundance of gold, thereby rendering it possible for banks to displace silver in their reserves, the only place where it has ceased to be used. I could give you some curious lore about silver if you wanted it from Judge Grant, the owner of the largest ore reduction works in the world; it would be curiously interesting, but hardly evidence. Our silver product is, in fact, a petty affair, employing in 1889, on the census report, only 33,000 men, and making a product equal in value to about one-third the product of hens' eggs.

Views of United States' economists on bi-metallism.

33,133. Now I am happy to say that I am coming to the end of a very long cross-examination; but I want to ask you one or two questions with regard to sections 35*a* and 36 of your brief. In section 35*a* you say that "President F. A. Walker of Boston, and President "Andrews of Providence, are the two most conspicuous "advocates of what I think is miscalled bimetallism. "They have but little support among our professed "economists." When you say that of the professed economists, do you mean that the economists are opposed to the theory that the maintenance of the ratio is possible, or do you mean that the economists are opposed to the policy, which has sometimes been proposed in the United States, of the free coinage of silver?—What I mean to say is, that the gentlemen whom I have named, President Eliot of Harvard College (who would not assume to be an economist in the professorial sense, but is a thoroughbred man of rare capacity). Professors Dunbar, Taussig, MacVane, and John Fiske of Harvard, are what are called advocates of the single standard. At Yale, Professor William G. Sumner, Professor Hadley, and Professor Farnum, the three principal men, are like-minded. At Columbia, Professor Richmond Smith and Professor Seligmann, who are well known to Mr. Giffen, are like-minded. Outside of these professorial gentlemen whom I have named, Horace White, whom I esteem of the highest authority among the students on finance, is a single standard man; as also are David A. Wells, Carl Schurz, Abram S. Hewitt, Hugh McCulloch (whom I should have named as the man who carried the country through its most dangerous period as Secretary of the Treasury). Then when you go out west you have Professor Laughlin, and if I had my list here I could name a lot of others. The single standard men, as distinct from the alternate or double standard, are in the proportion of eight or ten to one among those who are reputed to be the professorial or academic teachers of political economy.

33,134. With regard to some of the names you have mentioned, Dunbar, Taussig, Hadley, Seligmann, Richmond Smith, and Professor Laughlin, can you point to any passages in their writings which attempt to controvert the arguments of Professor Walker. Are they in conflict with him?—They are distinctly in conflict with him. They have earlier or later presented the other views. I do not think they have taken issue with him since he began his late movement for a bimetallic league, but I speak of what I do know from personal correspondence, and from the responses to that privately printed document of which you have a copy.

Mr. E. Atkinson. 27 July 1894.

33,135. I asked the question because my information is different to yours—I do not question your authority, of course, for a moment, but still, I thought there might be some misapprehension, and I rather gather that you admit yourself that you are not aware that they have come in conflict with Professor Walker since he started or advocated his bimetallic league?—No; in fact, I was the only one that thought that movement of sufficient consequence to take it up.

33,136. When you mention these gentlemen whom you have stated, and whose names I have repeated, as what you call single standard men, am I to take it from you that that means that they are opposed to international bimetallism?—I ought not, perhaps, to speak distinctly and positively for them. I should simply say that, so far as I know their opinions, they regard the attempt to secure a treaty of international legal tender under the name of bimetallism as futile, and probably inoperative in any event. That is my judgment from very close personal intercourse with all of them, and they hold positions of eminence corresponding to such men as Marshall, Sedgwick, and Foxwell over here.

33,137. You cannot point to anything in the writings of any of these men that I have named in support of that view?—I happen to know what many of them have written, and that is the whole tone of their writings, but, of course, I cannot give you chapter and verse. If you write to each of them they will doubtless be very glad to respond and give you exactly what they do think. I am not entitled to speak for them on questions of detail.

Legal tender.

33,138. You said just now in the course of your evidence, as I understood, that you yourself were opposed to all interference with what you call natural laws in regard to money; was that so?—I hold the choice first of iron, then of copper, then of silver, then of gold, as the unit of value has come through a process of natural selection according to the changing conditions and commercial progress of the centuries, and that it asserts itself and is an element in monetary progress. We have not yet discovered any substance to convert into a unit of value which is subject to so little variation in the ordinary term of business contracts as gold, and therefore it has become the unit of value in international commerce throughout the world to which no local act of legal tender is or can be applied. Then I have gone into a research—a long and rather exhaustive one, as to the origin of the conception of legal tender. I never got my mind clear until I reasoned upon the substance and working of legal tender acts. I made up my mind *à priori* that when good money was in circulation by weight, and the true weight was offered, no legal tender act could ever have been conceived, because the man to whom the true weight promised had been offered would be very glad to take it, and it required no force to cause him to accept it. Then I searched for the origin of legal tender and I found it first in Greece, in the time of Solon, where the farmers had entered into mortgages under penalty of slavery if they could not pay. They could not pay, and Solon depreciated the drachmae 27 per cent., and by a decree of legal tender scaled down all the mortgages. Then I found in reading Ihnes' History of Rome—the latest and most authentic—that in the Punic Wars the Consuls or the Governors of Rome depreciated the copper coin of Rome and tried to make it legal tender, with the usual results of disaster. Then I traced it down to the time of Charlemagne and over to the time of Edward the 1st, and down to the time of our own revolutionary war, where the legal tender currency of the revolution came much nearer to giving you the victory than any of your other efforts. I found that in every instance a legal tender Act had been born in fraud—in the effort to force the creditor to receive money of less intrinsic value than had been promised him Therefore, I have come to the conviction which China came to long ago, that there should be no legal tender Act, and that money should pass wholly by weight on a lawful unit of value. I find that in all international commerce it is the exact

weight of the precious metal in each coin which gives it its valuation or estimation, and that if you tamper by legal tender Acts with the standard of international coin I think you will immediately have a new standard or unit of commerce of 100 grains or 100 pennyweights, or some metric system of weight of gold in specific terms.

33,139. Confining ourselves entirely to gold and silver for the moment, when you say that you object to interference with natural laws, do you mean that gold and silver should be placed on the same basis—on an equal footing?—If you ask me what I would do if I were dictator——

33,140. I want to know what you mean by saying that you object to an interference with natural laws—you mean that those two metals should be left to themselves—is that it?—Yes, or three or four.

33,141. But confining ourselves to gold and silver?—Yes.

33,142. They should be left to themselves to operate on an equal footing, though at present gold is made legal tender by law, while silver is not?—I would repeal all legal tender Acts if I had my way, except for the perpetuation of evidence that a man had attempted to fulfil his contract according to his understanding of it.

33,143. Would you enact that gold should cease to be legal tender?—I would repeal legal tender Acts which gave a choice of the kind of money in which payment shall be made, and I would give new names to the coins, and open the mints to the free coinage of gold, silver, copper, lead, paper, or leather, and let everybody make his own contract, and then enforce it. That is what I would do.

Maintenance of gold standard in the United States.

33,144. You also expressed the opinion—this is on another subject—that the United States of America would never change their gold standard?—That is my opinion, and always has been.

33,145. (*Chairman.*) For international purposes I think you said?—For international or for domestic purposes except under the stress of war, and I do not think we would ever do that again even in war. We have had our lesson for one century.

33,146. I was alluding to something else—you said even if they did change it by law gold would still remain the standard for international purposes?—What I meant to say then was even if the United States could be persuaded or could persuade other nations to go into a treaty of international legal tender, the merchants and bankers would immediately contract themselves outside of the treaty and conduct their exchanges on the weight of gold or by bills of exchange drawn on specific terms of gold by weight.

33,147. (*Mr. Chaplin.*) When gold and silver were equally legal tender prior to the closing of the mints in the United States, did the bankers think it necessary to adopt that course?—No, because the silver dollar was worth 102½ cents, and it was melted and sent to France as fast as it was issued from the mint.

33,148. If there was an international arrangement arrived at which put silver in the same position as it occupied then why should the bankers think it necessary to adopt that course in the future, and bid more than they did in the past?—Simply because we maintained the gold standard and shoved the silver over on to France as fast as they wanted it, and would do it again if they did the same thing.

33,149. They did not contract themselves out of their engagements; they did not ask to be specially paid in gold; and if the same state of things was restored as existed before why should it be more necessary in the future, and why should they adopt that course?—Because the ratio of silver to gold has changed so utterly.

33,150. Quite so, but I am assuming that the old state of things was restored?—If you restore the ratios of silver to gold bullion which existed prior to 1873, with the Latin Union in force, and the mints of Europe open to free coinage we should not care anything about it.

33,151. That is exactly what I wanted to arrive at. Then under the circumstances the bankers would not think it the least necessary to make their contracts specially in gold?—Not at all. (*The witness when correcting his evidence wished to add the following words.*) *But only on the supposition that you can establish value by statute or treaty.*

33,152. Now when you say that America will never change her gold standard, are you acquainted with the views and the recent utterances of any prominent public men upon the question in America?—Who, for instance?

33,153. I will, for instance, take Mr. Read?—Yes, entirely.

33,154. Mr. Read is a prominent public man, I think, is he not?—He is—very prominent.

33,155. He was the Speaker of the House during President Harrison's administration?—Yes.

33,156. I am going to ask your attention to one or two statements that he has recently made, and then to ask you whether you still adhere to the opinion that there would be no change in the gold standard?—I know just what he said.

33,157?—You do?—Yes.

33,158. He was asked by an interviewer to give a glimpse of the future policy of the Republican party, and among other things he said this: "One thing, at "least, I have learned since the cessation of the silver "purchase last year"—that is, since the repeal of the Sherman Act—"that cheap silver is an effective "stimulus to Asiatic exports, and this being the case "we have got to consider silver and the tariff not as "two issues, but as one." Now with regard to the stimulus that the cheapening of silver must be reducing the prices in America, are you aware that this opinion is expressed by Mr. Read, which is an aspect of the question which I am free to confess has only since last year attracted our notice in European States—that aspect being this, that cheap silver enormously assists Asiatic exports, and, therefore, places American agriculturists in a very great difficulty. I ask you whether you are aware that that is the opinion which has been expressed by a very prominent public man?—Yes; it is a matter of common notoriety.

33,159. That does not shake your views at all as to the possibility of a change in the standard in America?—Not a particle. I may add that I think this change of front on the part of some prominent Republicans has excited more derision than conviction.

33,160. Can you name any of the prominent men in public life, in the Senate, for instance, at this moment who are opposed to international bi-metallism?—I should not undertake to do so.

33,161. Do you think they may all be in favour of it?—I do not say that they are, or are not. I should not express an opinion upon that point. I think you are quite as ready to find that out as I am.

33,162. Then when you say that there is no probability of a change in America from their present gold standard, you do not found that at all upon the opinions of public men in whose hands to a great extent that decision might rest, but you found it entirely upon your own opinion and convictions?—I think I have given as full and complete a basis for my convictions as it is possible for me to give. I derived them from my own investigations, and not from the changing and variable opinions of gentlemen who are in political life, who are now manœuvring for position with a view to subsequent elections, both on the tariff, on the Bank question, and on the monetary question.

Effect of low prices on future production of wheat in America.

33,163. I have only one more question to ask you, and that is with regard to the future of prices and the future of American production. You still anticipate, I think, that American production in wheat will continue to increase, even at the present rate of prices?—I expressed the opinion that our supply would be maintained at or about 25*s.* per quarter in London to the extent of your wants on a gold basis.

33,164. And the capacity of America for production is still very great, I understand you to say?—I should say practically unlimited at a price.

33,165. Any price above 25*s.* a quarter?—With a considerable rise above 25*s.* a quarter, say 30*s.*, I should expect to see an enormous increase in the supply.

33,166. I believe in the "Forum"—I believe that is the name of one of your magazines, is it not?—Yes.

33,167. Some three or four years ago an article was published which received the support of some very eminent statisticians in this country, to this effect, that America had got to the end of its tether pretty nearly, in the production of wheat, and that within the course probably of a few years—by the end of the century—we might look forward to the time when America would

Mr. E. Atkinson.
27 July 1894.

become a wheat importing country. Do you hold those views at all?—Not in the least degree, unless the Argentine could furnish wheat at a profit, at 15*s.* to 20*s.*—then we might import wheat from the Argentine, because something else would pay us better. We do not object to cheap bread.

33,168. It was held out to us that there was a prospect of a rise in the prices of wheat, and perhaps a considerable rise, for that reason, that America after some few years would be a wheat importing country, and not be able to grow enough to maintain herself; but you regard that as a dream?—I regard that as an utter delusion.

33,169. Altogether?—Altogether. At and above 25*s.* we shall probably continue our big crops. You must take my opinion and judge for yourselves what it is worth.

Maintenance of ratio between gold and silver.

33,170. I have only one more question to ask you and it is in reference to a statement made in your pamphlet to which you directed our attention yesterday called "Some suggestions on methods of investigation in monetary science." You conclude it in these words—you are referring to the possibility of maintaining a ratio between the metals by an international arrangement—and you say, "I simply regard this matter as one "which it is beyond the power of treaty or legislation to "control." Are you aware that a commission was appointed in this country to examine into that question five or six years ago, and that they came to the unanimous conclusion that it was within the powers of treaty or legislation to maintain a ratio, provided the ratio was fixed at something approaching to the market ratio?—I am perfectly aware of it; but I observed this important qualification—*provided* the ratio was fixed at something approaching the *market value*.

33,171. That does not alter your opinion?—Not a bit. How long would it last?

33,172. The ratio up to 1873 for a very great number of years was steadily maintained?—If you think so.

33,173. Or practically steadily, is that not the fact; do you dispute the fact?—No, it so happened.

33,174. Then can you point to any special or particular circumstances now which should make that impossible at present, which from experience appears to have been perfectly possible in the past?—I think that is merely a coincidence.

33,175. Merely a coincidence, is that the only way in which you can explain it?—Yes, merely a coincidence of the legal ratio with the market value for a considerable period. I do not think it established the equivalent use of gold or silver in any country in the Latin Union; they always either went on silver or on gold; one or the other.

33,176. (*Mr. Giffen.*) That is to say the ratio was not really maintained?—The ratio was not real; there was a variation of a sufficient per-centage either to drive out the silver or to drive out the gold. And here I want to put in one important point in my judgment. You have the Gresham law that the poorer money, which is legal tender, drives out the good money. I think I am right in saying that in that commerce to which no legal tender Act has been or can be applied, the good money which is not a legal tender, drives all the poor money out of circulation, and in that way the standard or unit of all international commerce has become exclusively gold.

33,177. I believe you are aware that Adam Smith held the opinion that in certain cases the good money took the precedence of the bad money, and that it was not always true that the bad money drove out the good?—Yes.

33,178. (*Mr. Chaplin.*) You speak of dearer money and cheaper money, or good money or bad money; how can there be any cheaper money or dearer money if the ratio was effectively maintained between the two metals?—If?

33,179. Yes, if?—I discount the "if."

33,180. Exactly, but assuming the possibility?—If you can maintain the price of any two things of varying cost at a fixed ratio I have no objection to your doing it. I do not think you can, and I fully adopt Cernuschi's fire test about it in these terms. I quote from memory: "That only is good money which is "worth as much after it is melted as it purports to be "worth in the coin."

33,181. Assuming what now you think a remote possibility—that 12 members of a Royal Commission in England were right and that Mr. Atkinson was wrong—on that assumption you would think that the question of cheaper or dearer money, or of dearer money being driven out by cheaper money would not arise and could not arise?—Well, I apologise for differing from the conclusion of the 12 members of the Gold and Silver Commission. My general observation is that the man who adheres to his own opinions on his own investigation is the man who is ultimately justified.

Mr. E. Atkinson.
27 July 1894.

33,182. Thank you; that is the only answer you have to my question?—I defer with great respect to the opinions of Lord Herschell and the other eminent members of that Commission. I was a little disappointed in their results, and I did not come to the conclusion that you could regulate the price of any commodity or its ratio to any other commodity by statute regulations. If you can, why use silver; why not go to paper at once?

Estimated cost of placing wheat on the London market.

33,183. (*Mr. Little.*) Have you arrived at your estimated rate at which wheat could be put upon the London market upon the basis of the cost of production, or simply by calculating what is the difference in the cost of harvesting and delivery now and at a former period?—I have reached it in this way—that at a given period a few years since the price in the London market evidently yielded a very handsome profit to the American farmer, because he increased his crop as fast as he secured capital to enable him to do it. We borrowed capital on mortgage, and he paid his debts out of the product. From that date down to the present you can measure certain changes in the cost of production and distribution, which being deducted from the price did then leave him still a very stimulating profit, and would now apparently leave him a moderate profit, and would make the continuance of the production sure.

33,184. That is to say, your estimate is not at all upon the basis of the cost of production?—I have, as I have said many times over and over again, tried to get at the unit of cost in money of beef, of cotton, and of wheat, and have never been able to get any satisfactory result. You may get from the Agricultural Experiment Station in Texas the most complete mathematical statement that has ever been made of the cost of producing and marketing a bale of cotton about four cents a pound. You may get from George W. Palmer, of Saltville, South West Virginia, the most accurate computation, on the whole, that I have ever seen of the cost of making a pound of beef. You may get from George S. Berry, of California, in the San Joachim Valley, the most extraordinary statement of the lowest cost of wheat at the highest rates of wages paid anywhere that I have ever seen—but it is no guide to anybody, it is exceptional. I once asked an old friend who had been very long a cotton planter and dealer in Augusta Georgia, "What is the cost "of a pound of cotton?" He said, "I will reply "to you Yankee-fashion. My neighbour, So-and-so, "has a boy who is fitting for college. His father is "poor; he wanted him to pay his own expenses last year "in his odd time between his studies. The boy made "four bales of cotton and picked them. What did "it cost?" That is the way the cotton crop is made just now by small cotton growers everywhere, who are subsisting some other way, and who make their cotton as a cash crop. That is the way in which a very large portion of the wheat is now being made. Who can define its cost and separate it from the other products on which the farmer subsists?

33,185. To make your estimate a sound one we must suppose we have taken into account all the differences that may have taken place. You have taken the reduction on the cost of handling, harvesting, and delivering this corn, but you must assume that this corn is grown otherwise at the same expense as before?—As far as I can learn it is rather a diminishing expense.

33,186. Have you taken into account the harvesting expenses?—I have taken that into account.

33,187. Labour has risen?—As it has risen I think it has become more effective. Among those tables that I put in you will find some extraordinary tables of textile factories that I know about. In 1840 the hours of labour in a woollen mill were 14 hours a day, and the farmers' daughters of New England, who were intelligent people, earned 4⅓ cents an hour, and found it a step in advance to do that kind of work. The hours of labour in what purports to be the same mill

Mr. E. Atkinson. 27 July 1894.

to-day are 10, and the earnings are 13 cents an hour, almost all foreign operatives; but the cost of labour in the cloth per unit of yard is less now than it was before. That is true in the cotton production and manufacture very surely. I know that business well.

33,188. But my point is that you have only taken certain circumstances into account and that you have assumed that otherwise the cost of producing wheat is the same. I suppose that the centre of wheat cultivation recedes further and further, does it not?—Yes.

33,189. The distance to be travelled becomes greater?—Yes.

33,190. So far that would tend to diminish the saving on the cost of delivery?—The reduction in the charge by the rail goes down faster than the distance increases.

33,191. The greater distance partly takes off the saving, does it not?—It takes off a part of what might otherwise have been made.

33,192. My view is that you must not take off the whole difference in the cost of delivery if the distance from which the delivery is to be made keeps increasing. If you take from a fixed point, say Chicago, the cost of delivery has diminished by so much as you say—11*s.* a quarter—but it was reckoned in 1879 by Mr. Pell and Mr. Read at 5*s.* 2*d.* a quarter?—Yes, my point was west of Chicago.

33,193. You say it has diminished 11*s.* a quarter; then if you go further and further beyond Chicago every year there must be that additional expense?—Not necessarily, when the railway charge diminishes, or when the rail is brought nearer the farm.

33,194. I do not mean to say that it makes it larger, but it makes it larger in proportion than the cost is nearer to Chicago?—Not necessarily, because at the time Messrs. Pell and Read spoke, the whole of that wheat was hauled several miles along a common road, and the extension of the railroad having reached the farm has made the cost of delivery less. I assume nothing that I can get a fact upon.

System of cultivation in the Eastern States.

33,195. In regard to the system of cultivation, I think you stated that very generally, at least, in the Eastern States, wheat has come to be a rotation crop instead of being a crop on virgin soil?—Yes, of course.

33,196. Does that not increase the expense of growing wheat?—I cannot answer that. I can only say that the land in and about Genesee county, and in Southern Pennsylvania, the two great eastern wheat sections, is to-day worth a great deal more in the market than it was when it was exclusively devoted to wheat.

33,197. Because it is near the population, I presume?—They still grow wheat upon it.

33,198. As a rotation crop?—As a rotation crop.

33,199. You probably know enough of agriculture to know that in England, at any rate, it is supposed that some of the crops are grown with the object of storing up fertility for the grain crops?—Yes, of course.

33,200. And grown at a loss?—I said I was not a farmer; but I am perfectly familiar with country affairs; I have always lived in the country, and I am not ignorant upon those points.

Estimated cost of placing wheat on the London market.

33,201. Then may we take it that this is only an estimate based upon the difference in the cost of handling and delivering the goods, not upon the basis of the actual cost of production?—Mainly on changes in the mechanism of production and distribution, but also on a change from mere cropping to intelligent cultivation.

System of land tenure in the United States.

33,202. (*Mr. Lambert.*) You said the system of land tenure in the United States is very different from that in this country?—Yes, it is.

33,203. Could you give us a short outline of the system of land tenure in your country?—As I comprehend your methods, your title passes by the delivery of documents, and it is essential that all the documents should be continuous, and that the record upon the documents themselves should be complete, and your possession of land rests upon the possession of these title deeds. Now with us the title deed, you may say, is a mere evidence of the transfer of the land from A. to B., and when B. receives his title, or is preparing to receive his title, instead of calling for the previous deeds and conveyances in their exact form he goes to the registry where all previous deeds have been registered, and he searches the record without having any possession of the instrument itself. Finding that record complete, he then puts the deed to himself on the record, and that gives him a title to that land, and he may then burn up all the original deeds and yet his title is good by the registry

Mr. E. Atkinson. 27 July 1894.

Cost of transfer of land in United States.

33,204. What does it cost to transfer land in that way?—Very varying sums depending upon the places, and the complexity of the sub-divisions. On farm lands in the West which have been dealt in by quarter sections, which have not been cut up, and which are based on Government surveys, the cost of transfer is very small. In the cities where there is a long record of continuous changes and cutting up into sections, the search of title costs a good deal of money, but I think, on general ideas, very much less than it does here.

33,205. Take an agricultural farm of 500 acres, what would a transfer in that case cost?—I cannot tell you; but it would be a very small matter. I should think if you take any moderate sized farm in Massachusetts it might cost 20*l.* to search the titles sufficiently; but it is a mere guess, I cannot tell you exactly, it is out of my line.

33,206. Do I understand that in the case of intestacy, the land is divided amongst the children of the deceased?—In equal proportions, with a right of dower to the widow. I am not exactly up in those things. We are now contemplating, and Massachusetts is taking the first steps towards it, the adoption of the Australian or Torrens system of registering titles rather than deeds, and in many parts of the south I think they will be practically obliged to advertise absent or lost claimants out of existence by notices such as are taken in the Probate Court, and resettle all the lands because the titles are so bad in the mountain sections, and the value is rapidly rising.

System of land tenure in the United States.

33,207. Take the case of a man occupying land owned by another man; have you any acquaintance with that system of tenure or tenancy?—That would be under an ordinary lease.

33,208. I suppose you could not speak authoritatively upon the minute details of those tenancies?—I cannot, I am not a conveyancer or a lawyer; I can only say that a man may own land which is fit for agriculture, and may lease it to somebody else at his peril because the lease would be only the ordinary lease, and if the man skinned the land, and took all the vitals out of it there would be no remedy.

33,209. There would be no remedy?—No; we have practically none of your customary terms in leases for keeping up the land and working the straw and all that sort of thing. That tenure is practically unknown.

33,210. The farmer has practically freedom of cultivation in every direction then?—He has absolute freedom of cultivation in every direction; it is very rare that there would be any conditions. I do not know what may be coming up in some of those tenancies in the west; but in the east the conditional lease is almost unknown.

33,211. But in the overwhelming majority of cases the owner farms his own land?—I have given you the proportion; 80 per cent. of those north of what is called Mason and Dixons' line, that is, north of the old slave line. There are over 4,500,000 farmers, and about the same number of farm labourers. The farmer is a hard worker himself, and the labourer is a potential farmer of the future. We have no permanent separation of the two classes.

Cost of placing United States' beef on British markets.

33,212. Can you give us any estimate as to what price per pound beef can be placed in our markets from the United States?—No; I have said that I have endeavoured to find that out and have failed in all the instances.

Butter trade in the United States.

33,213. Do you imagine that the United States will ever become competitors with this country as regards dairy produce; such as butter?—I believe we are exporting a great deal of butter and cheese to you now, are we not—I think we send immense quantities of cheese.

33,214. I am talking rather more of butter?—I think we are exporting very large quantities of butter to you.

33,215. Do you calculate that that trade will increase or decrease in the future at the present rate of prices? It will be apt to increase, I should think. Dairy farming is very profitable just now, when you conduct it with intelligence.

Mr. E. Atkinson. — 27 July 1894.

Farming New England.

33,216. You instanced a farm which cost 20*l.* an acre in New England, or was worth 20*l.* per acre; what would be cultivated upon that land?—They would raise stock and vegetables, and dairy products and eggs, Indian corn, hay, and if it was near a city, all sorts of what we call garden truck.

33,217. Would such farmers as those raise the produce for export, or for consumption near their own holding?—On farms near cities mainly for consumption near their own holding; they raise perishable products in the neighbourhood of cities, but we move eggs a 1,000 miles or more. There are cold storage egg cars made on purpose which run from Michigan to New York, and from other western States, over a 1,000 miles for the conveyance of eggs under safe conditions. The egg crop, you may call it, of the United States, is worth somewhere about 120 million dollars, twice or three times the silver product in value.

Co-operation amongst farmers in the United States.

33,218. Have the farmers any system of co-operating together, or of joining together in the sale of their produce?—They co-operate together under articles of incorporation for establishing creameries and cheese factories, and in many parts of the west, for buying harvesting machinery; but co-operative farming I never heard of.

33,219. In what part of the United States are co-operative creameries and cheese factories mostly in vogue?—I could not tell you. I have heard of them, but I cannot say where. I should say that it was really a limited company rather than what is technically known as co-operation. What is technically known as co-operation has no great success on our side, and probably never will have.

Tendency towards free trade in the United States.

33,220. You said in answer to another question that the farmers were beginning to realise that they were selling in a Free Trade market, whereas they were buying in a Protectionist market?—I think they are.

33,221. Do you anticipate from that that the feeling in favour of what is termed Free Trade or Free Imports is growing in the United States?—I think it is distinctly growing; and as a free trader myself in principle, I am only afraid that it may assume the type of revolutionary change, and go too fast for good judgment. It is distinctly tending that way.

33,222. I want to get the general drift of opinion?—There may be a temporary reaction, you know.

33,223. What is the general drift now?—The general drift is through freer trade to by-and-by what you call British Free Trade; that is, to Free Trade qualified by an assumed necessity for collecting part of the national revenue from duties on imports. You will observe, in some of the papers that I have put in that all the normal expenses of the United States Government for the Civil Service, the Army, the Navy, the Public Buildings, and everything except what we have inherited from a state of war, are now covered by the taxes on liquors and tobacco, domestic and foreign. What I call the normal cost of our national government comes to $2.50, or 10*s.* per head, and is very uniform. The only necessity for a general Customs Revenue at the present time is to meet the pensions, and a part of the interest on the Public Debt. The pension obligation has culminated, and is rapidly diminishing in the natural course of events, so that within a short term of years it will become relatively an unimportant matter, even in mere dollars. Therefore the potential of a very low tariff is in our hands, whenever the mass of the people choose to take that direction.

His qualifications and those of economists compared.

33,224. (*Mr. Everett.*) I notice that in paragraph 4 of your brief you say that you are not an economist of the abstract or academic order, and that while you are very familiar with the hypothesis of the deductive or *à priori* school, you pay little regard to their theories until you can sustain them on well-proved facts. I gather from that that you rather think the economists of the abstract or academic order do not ground their theories on facts; that you are rather a specialist there; that they disregard facts at the academies in forming their economic theories while you are an exception, and base your theories upon well-proved facts?—I merely would say that I am not a University man; I have been 52 years at hard work, and I have made my study of these subjects from the standpoint of a man who, in a modest way, has taken a small part in the development of the last 50 years. I have some reputation for combining statements of fact. I am quoted about as often by one side as the other, and held in repute to some extent.

Mr. E. Atkinson. — 27 July 1894.

33,225. I beg your pardon. Then I notice in the next paragraph you state that you suppose you may claim to be considered an authority on many points. Do you think that you may be considered to be an authority on the condition of agriculture in the United States; is that one of the points on which you consider that you speak with authority?—I would state that the facts which I submitted in regard to the general condition of the farmers in the address to the New York Chamber of Commerce were received with surprise, but were accepted as authoritative, and published by them without any solicitation of mine; and while the Chamber of Commerce did not commit itself to what I or anyone else may say in such an address, they would not be apt to publish those facts unless they thought my authority would warrant them in doing so.

33,226. You are not a practical farmer yourself, I gather?—I am not.

33,227. Do you speak of the condition of agriculture from personal knowledge, or from hearsay, so to speak?—I could not admit that I speak from either. I speak of the conditions of agriculture from such power of observation as I possess in going through the country not infrequently, but not from hearsay, unless you call such testimony as this of the individuals themselves testifying to their own success hearsay.

33,228. Then from the last part of that paragraph I gather that among the labour leaders you have a certain amount of unpopularity?—They are very apt to invite me to speak at the unions and so forth, and I generally go for them in a pretty savage kind of way, but they ask me to come again.

33,229. You give it that, as one of the workmen expressed it, they say, "We don't like ye one bit, but "we can't git along without ye?"—They do rest authority on my statements of fact, and I suppose I have some influence.

Parity in value of silver increased in agricultural produce.

33,230. Then coming to paragraph 8, you there speak of having published an article in the "Fortnightly Review," in 1880, in which you showed that the improvements in the processes of agriculture in milling and in moving crops by rail and water, would soon make 34*s.* per quarter as good a price to the western farmer as 50*s.* in Mark Lane had been; do you not imagine that all the while that improvements have been going on in agricultural processes of production, improvements have also been going on in the art of extracting the precious metals, and would not the presumption be that there would be some kind of parity preserved between the precious metals and agricultural produce; and further, is it not the fact that such parity has been preserved as between silver and agricultural produce, and is it not the fact that an ounce of silver through the world to-day, uncoined silver, will exchange for just about the same quantity of agricultural produce as it would have done 20 years ago?—I have not looked into that, as I did not regard it as an element of any particular consequence. I am inclined to think that the production of silver in the United States has been cheapened even more than the production of agricultural products—considerably more—especially in the copper regions of Montana, where the silver may be said to cost nothing, for the copper pays for itself, and the silver is so much clear gain.

33,231. If the law of the United States had not stepped in to divest silver of free coinage and legal tender, the farmer in the United States would be receiving about the same money for his produce to-day as he did 20 years ago, would he not?—Possibly; and possibly he might not have been able to buy half as much for what he received as he does now. The farmer wants good money of the highest purchasing power.

Condition of farmers in the United States.

33,232. You have told us broadly that in your opinion the farmers in the United States, with the exception of this last year, have been in very good condition. Of course, it has been abundantly brought to your notice that that is in diametric opposition to a considerable weight of testimony which has come to us from a member of our own Commission, and from his son, who has been backward and forwards to America for the last 20 years. I have also two or three short references to opinions which have been expressed on the point; one is an article in the "Nineteenth Century," of November 1892, which was entitled, "The Ruin of the American Farmer," and which is written by William Maitland. Amongst other things, he says: "In every State the mortgages are increasing with "amazing rapidity, and even so they are not keeping

Mr. E. Atkinson. 7 July 1894.

"pace with the necessities of the farmer; ordinary "lenders are getting afraid to lend to him"?—I would state in reply to the point you desire to make, that I am aware that you have had brought before you evidence, a report of which I have seen, which is entirely inconsistent with the facts which I have brought before you. I thought that evidence was superficial and was not based on a sufficient knowledge of the facts, and thinking it somewhat important to yourselves, and yet more to my own country, that you should have the facts, I came here for the very reason that I regarded that evidence as superficial and insufficient.

33,233. (*Mr. Chaplin.*) You would like to have an opportunity of contradicting it?—I wanted to have the opportunity of putting what I believe to be the truth, before you. Of course, the other men may be right. I am afraid I cannot stay any longer to-day.

33,234. (*Mr. Everett.*) I think it is very unfortunate that you should come here and give evidence in chief, which is diametrically opposed to anything that has been given before, and that there should be any flinching from cross-examination?—I have not flinched. I think I have been very reasonable in the amount of time I have given you. I came over here for rest and recreation, and it seems to me that I have extended to you the utmost courtesy you could ask of me. I will come again if you want me to by and bye, but I think you cannot ask me to stay any longer now.

Reduction of freight rates on wheat from Western States to the seaboard, 1873-87.

33,235. (*Chairman.*) There is just one question I should like to ask you, and I think I must ask you before you go. When you spoke of the cost of carriage of wheat from the Western States from 1873 to 1887, as being reduced by 11*s.* a quarter, did you refer to Chicago especially, or were you referring more generally to the carriage from the Western States?—My analysis covered a much wider area than merely Chicago to the sea.

33,236. Then it would be no answer to you to say that the freight from Chicago to New York has not been reduced to that amount?—Not at all.

33,237. You were speaking of the centre of the corn growing district?—I estimated as closely as I could the average cost of getting wheat from its place of production to the seaboard through Chicago. The rates west of Chicago were then much higher than they were east of Chicago, they are now about as low.

33,238. Then the 11*s.* a quarter did not relate to the reduction of freight from Chicago alone?—Certainly not. I went through that in a most exhaustive way.

33,239. (*Mr. Chaplin.*) I must clear this up because it arose in my cross-examination. What I referred to was Mr. Atkinson's written statement in his pamphlet in 1887; and what he said was this: "The first con- "sideration is to be given to the reduction in the "railway charge for moving produce from Chicago to "the seaboard, a little less than 1,000 miles. This "reduction has been on the average traffic a little "more than one cent per ton per mile, comparing the "rates of 1870 to 1873 inclusive, with those of 1883 to "1886 inclusive." It was upon that statement that I cross-examined you; do you adhere to that?—That I adhere to; and that is perfectly consistent with the statement I have made now. The largest element of reduction had been between Chicago and the seaboard; but in my statement I undertook to get as near as I could to the complete change in transportation on an average distance of 1,400 to 1,500 miles, of which Chicago to the sea came to 1,000.

Mr. E. Atkinson. 27 July 1894.

33,240. (*Chairman.*) And in your evidence in chief you did not in this connexion mention Chicago at all?—I think not.

33,241. On the contrary you stated that that was the reduction in the cost of conveyance from the corn-growing districts?—Yes.

33,242, And you mentioned several States which were far beyond Chicago?—Far beyond.

33,243. Such as Minneapolis, and so forth?—Yes, that is 1,400 miles off. It is the great wheat centre of the State of Minnesota.

33,244. Could you supply the Commission later with the specific data on which you formed that opinion?—I do not believe I could. I certainly could not on this side of the water.

33,245. I mean when you get back to America, because it is a very important and interesting point?—Well, it is a past chapter. The mass of material that I had to go through to make that computation, you can hardly conceive of. Then I verified it by merchants and by the railroad men, and I assure you that I did everything that a man could do, to make it accurate, but the matter of real importance is the present cost.

Price of wheat in America.

33,246. (*Mr. Everett.*) I can understand how all these reductions in the cost of transport can enable the corn to be sold at a less price here; but has not the price in America itself fallen just as much as it has here?—Certainly, and there was, to a certain extent, a disastrous effect for the time being on the Eastern wheat grower which struck him even before it struck you; it altered all the conditions of agriculture, and soon brought an adjustment in which many men were subjected to the same difficulty that you now have here. I think we can change our methods more quickly than you do.

33,247. I should have thought that lessening the cost of sending it to a distant market by taking the corn out of the country, would have raised the price in the country itself?—The first effect of western competition and of the low rates of freight changed all the conditions of Eastern agriculture before you began to feel the serious effect of it. I speak from general observation.

33,248. What sets the price of wheat in America?—What the excess will bring for export. It does not make any apparent difference in the consumption of wheat whether it is about four dollars or six dollars a barrel. About a barrel of flour a year is consumed by each individual, and that quantity or consumption does not seem to vary with the price.

33,249. You have tried to account for the fall in the price here by the economies in transit between America and here; but curiously enough in your country itself the price has fallen just as much as it has here?—Of course it has. There is only the difference of the ocean freight. I was told that there was wheat on the steamer that I came over in, which barely paid the cost of putting on board and discharging.

NOTE.—The witness subsequently sent the following note upon his evidence:—

"Lest it should be assumed that every mortgage recorded in the United States has been listed and computed, I beg to say that my intention was to testify that every registry of mortgages has been the subject of the census research, and by methods which are fully explained by the authorities the conditions of all mortgages have been deduced by methods which leave but little margin for error, and which have satisfied me that the returns are as nearly absolute as such returns can ever be."

The witness withdrew.

Adjourned.

INDEX TO EVIDENCE.

MR. JAMES KAY, Chairman, and MR. JAMES BARLOW, Vice-Chairman, of the Blackburn and District Farmers' Association.

Absentee landlords, 14,195–7. Agricultural Holdings Act, 13,972; expensive procedure of the, 13,973–84. Agents, land, 14,194. Appointment of umpire, 13,992–5. Blackburn district, depression in the, 14,101–3. Cattle disease, 14,104. Capricious evictions, 14,198–205; compensation for, 14079–100. Claims and counter-claims, 14,044–50. Compensation; for capricious evictions, 14,079–100; for compulsory disturbance, 14,257–60; for drainage, 14,002–11; for manures, 14,125–6; schedules of, 13,996–14,001. Dairying in the Blackburn district, 14,261–76; decrease in fertility of soil, 14,277–9. Depression in the Blackburn district, 14,101–3. Diseased cattle, 14,104–13. Distress, law of, 14,051–6. Drainage, execution of, by Board of Agriculture, 14,017–18; improvements to be sanctioned by official referees, 14,019–022. F.'s, the three, 13,961–71; 14,124. Fall in prices, 14,122–3. Farmers' Association, Lancashire, 13,949–60. Fixing of rent, 14,193. Foreign meat, marking of, 14,119–21; 14,213–29. Ground Game Act, 14,057–78. Improvements; to be sanctioned by official referees, 14,019–22; compensation for, 14,254–5; value of, to incoming tenants, 14,023–43. Improverishment of soil, 14,129. Inherent capabilities of the soil, 14,037–43. Judicial rents, 14,156–71. Lancashire Farmers' Association, 13,949–61. Land agents, 14,194. Land courts, 14,190. Law of primogeniture, 14,144. Letting of farms, 14,115–6. Low prices, 14,130–1. Manures, scale of compensation for, 14,125–6. Meat, marking of foreign, 14,119–21; 14,213–29. Milk, price of, 14,114. Mortgages, 14,141–5. Notice to quit, 14,206–12. Official referees; improvements to be sanctioned by, 14,019–22. Official valuers, 13,980–4; payment of, 13,945–91. Prices and rent, 14,132–9. Primogeniture, law of, 14,144. Produce, restrictions on cultivation and sale of, 14,172–89. Quit, notice to, 14,206–12. Rent, 14,146–55; fixing of, 14,193; judicial, 14,156–71; and prices, 14,132–9; reduction of, 14,117–8; 14,127–8. Restrictions on cultivation and on sale of produce, 14,172–89. Sale of produce and cultivation, restrictions on, 14,172–89. Schedules, of compensation, 13,996–14,000; of improvements and dilapidations, 14,001. Soil, inherent capabilities of the, 14,037–43. State loans for drainage, 14,012–16. Tuberculosis, 14,230–49.

MR. EDMUND TURNOR, landowner, of Wragby, Lincolnshire.

Agreements and leases, 14,402–4, 14,504–12. Agreements, restrictions in, 14,566–70. Agriculture, condition of, 14,537. Agricultural Holdings Act and the Lincolnshire custom, 14,405–7, 14,440–1. Agriculture statistics of Lincolnshire, 14,605–21. Arrears of rent, 14,532–6. Average rent, 14,314. Barley, duty on, 14,495–9; price of, 14,330–4, 14,385–7; and the malt tax, 14,595–7. Beer, 14,585. Capital of tenants, 14,530–1, 14,580. Cattle disease. 14,500–1, 14,622. Cattle, slaughter of foreign, 14,502–3, 14,526–9. Comparison between 1878 and 1893. Compensation for limeing, 14,442–50; for land laid down to grass, 14,408–10. Condition of agriculture, 14,537. Condition of farms, at end of tenancy, 14,543–5. Condition of farms, schedules of, 14,577–9. Condition of labourers, 14,364–7. Cultivation, system of, 14,412–3; changes in system of, 14,493. Currency, the, 14,375–7, 14,598–604. Demand for farms, 14,311–13, 14,556–62. Disease, cattle, 14,500–1, 14,622. Duty on barley, 14,495–9. Effect of the fall of prices, 14,454–5. Expenditure on improvements, 14,291–7, 14,572–6. Fall in prices, 14,491–2, 14,591–4; effect of, 14,454–5. Farmers and money lenders, 14,581–4. Farming, prospects of, 14,347–55; results of, 14,335–46, 14,414–20, 14,424–34. Farms, condition of, at end of tenancy, 14,543–5; demand for, 14,311–13, 14,556–62; large and small, compared, 14,480–90; letting of, 14,306–10; schedules of, condition of, 14,577–9; size of, 14,552–5; sub-division of, 14,371–4. Fever, swine, 14,586–9. Foreign cattle, slaughter of, 14,526–9. Foreign meat, the marking of, 14,379–80. Free sale, 14,411. Grass, land laid down to, 14,316–17, 14,563–5; compensation for, 14,408–10. Ground game, 14,421–3. Improvements, expenditure on, 14,291–7, 14,572–6. Labour, 14,318–27, 14,475–9. Labourers, condition of, 14,364–7. Land in hand, 14,302–5, 14,456–63, 14,513–18. Land laid down to grass, 14,316–7, 14,563–5; compensation for, 14,408–10. Land, uncultivated, 14,368. Land in Lincolnshire, value of, 14,398–401. Large and small farms compared, 14,480–90. Leases and yearly agreements, 14,402–4, 14,504–12. Length of notice to quit, 11,546–51. Letting of farms, 14,306–10. Limeing, compensation for, 14,442–50. Lincolnshire, agricultural statistics of, 14,605–21. Lincolnshire custom and the Agricultural Holdings Act, the 14,405–7, 14,440–1. Loans, State, 14,388–97. Malt tax, the, 14,381–4, 14,451–3, 14,494; and the price of barley, 14,595–7. Marking of foreign meat, the, 14,379–80. Money-lenders and farmers, 14,581–4. Notice to quit, length of, 14,546–51. Price of barley, 14,330–4, 14,385–7; and the malt tax, 14,595–7. Price of straw, 14,519–20. Prices, effect of the fall in, 14,454–5. Prices, fall in, 14,491–2, 14,591–4. Prospects of farming, 14,347–55. Quit, length of notice to, 14,546–51. Rates, 14,356–63, 14,378, 14,521–5; railway, 14,571. Rental, 14,285–7. Rent, arrears of, 14,532–6; average, 14,314–5; reduction in, 14,298–301, 14,435–9, 14,464–74, 14,538–42, 14,590. Restrictions in agreements, 14,566–70. Results of farming, 14,335–46, 14,414–20, 14,424–34. Sale, free, 14,411. Schedules of condition of farms, 14,577–9. Season of 1893, the, 14,328–9. Size of farms, 14,552–5. Slaughter of foreign cattle, 14,502–3, 14,526–9. Small farms and large, compared, 14,480–90. State loans, 14,388–97. Statistics of Lincolnshire Agricultural, 14,605–21. Straw, price of, 14,519–20. Sub-division of farms, 14,369–74. Swine fever, 14,586–9. System of cultivation, 14,412–3; changes in, 14,493. Tax, the malt, 14,381–4, 14,451–3, 14,494; and the price of barley, 14,595–7. Tenancy, condition of farms at end of, 14,543–5. Tenants capital, 14,530–1, 14,580. Uncultivated land, 14,368. Value of land in Lincolnshire, 14,398–401. Yearly agreements and leases, 14,402–4, 14,504–12.

MR. HENRY BUTLER BOMFORD, tenant farmer, Warwickshire.

Accounts, farm, 14,744–9. Acreage under wheat, 14,650. Agricultural Holdings Act, the, 14,806–7. Allotments, 14,699*a*–707, 14,750–3, 14,769–73, 14,813–14. Average rent, 14,635–9. Bad seasons, 14,687–91. Cattle, prices of, 14,692–9. Causes of depression, 14,672–99; bad seasons, 14,687–91; prices of cattle, 14,692–9; rent, 14,672–86. Comparison between depression in 1880 and the present time, 14,703–10. Courts, land, 14,777–9. Cultivation, system of, 14,646. Demand for farms, 14,640–1, 14,785–90. Depression, causes of, 14,672–99; bad seasons, 14,687–91; prices of cattle, 14,692–9; rent, 14,672–86. Falling prices and the season of 1893, 14,642–5. Farm accounts, 14,744–9. Farming, results of, 14,651–9. Farms, demand for, 14,640–1, 14,785–90; particulars of, 14,625–6. Fruit growing, 14,714–22. Gardening, market, 14,723–8. Grass, land laid down to, 14,647–9. Ground game, 14,808–9. Growing, fruit, 14,714–22. Highway rate, 14,791–4. Horses, tax on, 14,695–6, 14,821–8. Land courts, 14,777–9. Land laid down to grass, 14,647–9. Landlords and tenants, 14,731–4. Local taxation, 14,791–4. Low prices, 14,815–8. Market gardening, 14,723–8. Markets, 14,754–8. Notice to quit, 14,735–43, 14,780–4, 14,819–20, 14,829–30. Particulars of farms, 14,625–6. Prices, low, 14,815–8; of cattle, 14,592–9; the season of 1893 and falling, 14,642–5. Protection, 14,801–3. Quit, notice to, 14,735–43, 14,780–4, 14,819–20, 14,829–30. Rates, 14,660–5, 14,804–5; highway, 14,791–4; railway, 14,729–30; sanitary, 14,797–800.

Index to Evidence.

Rent, average, 14,635–9; and depression, 14,672–86; reduction of, 14,627–34, 14,711–13, 14,810–12. Results of farming, 14,651–9. Sanitary rate, 14,797–800. Season of 1893 and falling prices, 14,642–5. Seasons, bad, 14,687–91. System of cultivation, 14,646. Taxation, local, 14,791–4. Tax upon horses, 14,795–7, 14,821–8. Tenants and landlords, 14,731–4. Wages, 14,666–71, 14,759–66, 14,774–6. Wheat, acreage under, 14,650.

MR. FREDERICK PUNCHARD, land agent, Westmoreland.

Agricultural Holdings Act, 14,896–8, 14,964–73, 15,173–219; notice of claim under the, 14,903, 14,965–6, 15,028–31. Agreements, 15,134–44. Arbitration, 14,904–10, 14,967–73, 15,035–7, 15,105, 15,196–9, 15,217–9. Capital, interest on, 15,016–20; tenants, 15,094–7, 15,162–7. Cattle and dairy produce, prices of, 14,868–9. Cattle disease, 15,269–70. Claim, notice of, 14,903, 14,965–6, 15,028–31, 15,145–52, 15,187–8. Claims and counterclaims, 15,032–4, 15,189–95, 15,213–6, 15,247–50. Comparison between large and small farms, 14,886; yeomen and tenants, 14,890–5. Compensation, 15,204–12; for high farming, 15,159–61; for improvements, 14,913, 15,038–46, 15,051–65, 15,153–8, 15,273–5; scale of, 15,174–86. Consent of landlord to permanent improvements, 14,911–12. Co-operation, 15,076–9. Cropping, freedom of, 14,917–20. Dairy produce, prices of cattle and, 14,868–9. Demand for farms, 14,873–6. Depression in Westmoreland, 14,838–57; remedies for, 15,118. Disease, cattle, 15,269–70. Distress, the law of, 15,047–50, 15,109–17, 15,168–72, 15,225–46. Drainage, 14,900–2. Estate, the Underley, 14,835–7, 14,864–7, 15,091–3; tenants on, 14,937–43. Expenditure on improvements, 14,858–63. Fall in prices, 15,071–4. Farmers, yeomen, 14,887–9; and tenants compared, 14,890–5, 15,098–9. Farming, compensation for high, 15,159–61. Farms, demand for, 14,874–6. Farms, large and small, 14,886. Fixing of rent, 15,251–7. Freedom of cropping, 14,917–20. Free sale of improvements, 14,914–16. Ground game, 15,024–5, 15,066–7, 15,106–7. Hay crop, the, 14,959–63. High farming, compensation for, 15,159–61. Holdings, number and size of, 14,877–9; small, 14,880–5, 14,974–15,006, 15,265–6. Improvements, compensation for, 14,913, 15,038–46, 15,051–65, 15,153–58, 15,273–5; expenditure on, 14,858–63; free sale of 14,914–6; landlord's consent to permanent, 14,911–2; tenant's, 14,899, 15,007–11; unexhausted, 15,027. Interest on capital, 15,016–20. Land Improvement Company's rentcharges, 15,258–64. Landlord's consent to permanent improvements, 14,911–12. Law of distress, the, 15,047–50, 15,109–17, 15,168–72, 15,225–46. Letting by tender, 15,014, 15,080–3. Live-weight, sale by, 15,271. Low prices, 14,958, 15,012. Mortgage, 15,100–4. Notice of claim under the Agricultural Holdings Act, 14,903, 14,965–6, 15,028–31, 15,145–52, 15,187–8. Number and size of holdings, 14,877–9. Present position of tenants, 14,870–2, 15,021–3. Prices of cattle and dairy produce, 14,868–9. Prices, fall in, 15,071–4; low, 14,958, 15,012. Protection, 14,921. Rates, 14,922–34; sanitary, 14,935–6, 16,119–33, 15,200–3. Reduced outgoings to tenants, 14,958–5 Remedies for the depression, 15,118. Rentcharges, Land Improvement Company's, 15,258–64. Rent, arrears of, 15,276–7; fixing of, 15,251–7; and prices, 15,220–4; reduction of, 14,839–56, 15,013, 15,084–90. Sale by live-weight, 15,271–2. Scale of compensation, 15,174–86. Small holdings, 14,880–5, 14,974–15,006, 15,265–6. Tenants' capital, 15,094–7, 15,162–7. Tenants and yeomen, comparison between, 14,890–5, 15,098–9. Tenants' improvements, 14,899, 15,007–11. Tenants on the Underley estate, 14,937–43; outgoings, 15,015; present position of, 14,870–2, 15,021–3 Tender, letting by, 15,014, 15,080–3. Underley estate, the, 14,835–7, 14,864–7, 14,937–43, 15,091–3. Unexhausted improvements, 15,027. Wages, 14,944–52, 15,267–8. Westmoreland, depression in, 14,838–9. Yeomen farmers, 14,887–9; and tenants compared, 14,890–5, 15,098–9.

MR. JOHN W. BROUGHTON, land agent, surveyor and valuer, Skipton, Yorkshire.

Agreements, restrictions in, 15,428–31. Agricultural Holdings Act, the, 15,362–8. Arrears of rent, 15,498–502. Assessment to rates, 15,558–68. Average rent, 15,553–5. Breaking up grass land, 15,545–52. Buildings, repairs to, 15,425–7. Cattle diseases, 15,311–4. Cattle, slaughter of foreign, 15,358–9, 15,471–8. Changes of tenancy, and vacant farms, 15,315–6. Characteristics of district, 15,530–4. Competition for farms, 15,489–93. Depression, periods of, 15,445–7. Deteriorated cultivation, 15,317–20. Expenditure on improvements, 15,321–2, 15,327–30. Fall in prices, 15,308–10, 15,468–70, 15,483–7. Farmers, present position of the, 15,294–6, 15,466–7, 15,523–5. Farms, competition for, 15,489–93. Farming, system of, 15,450–61. Farms, large and small, compared, 15,334–5; produce of, 15,291–2; size of, 15,285–90; vacant, and changes of tenancy, 15,315–16. Grass land, breaking up of, 15,545–52. Horse-breeding, 15,449–52. Importation of live-stock, 15,346–57. Improvements, expenditure on, 15,321–2, 15,327–30. Instruction, technical, 15,369–80. Labour, 15,526–9; reduced, 15,331–3. Live weight, sale by, 15,422–4. Marking of foreign meat, the, 15,415–21, 15,432–5, 15,462–5. Prices, fall in, 15,308–10, 15,468–70, 15,483–7; reduction in rent and, 15,436–41; 15,488, 15,494–7. Property tax, 15,556–7. Rent, 15,404–7; arrears of, 15,498–502; average, 15,553–5; reduction of, 15,297–307, 15,323–6, 15,516–22; and prices, 15,436–41, 15,488, 15,494–7; sliding scale of, 15,408–14, 15,448, 15,509–15. Repairs to buildings, 15,442–4. Restrictions in agreements, 15,428–31. Road making by tenants, 15,381–97. Sheep and cattle gaits, 15,535–44. Slaughter of foreign cattle, 15,358–9, 15,471–8. Tenants' capital, 15,503–8. Tenure, 15,293. Tithe, 15,339–41. Wages, 15,336–8.

MR. CHARLES W. SMITH, late partner with Messrs. Whitaker, Whitehead & Co., general brokers, Liverpool.

Agricultural depression, report of the sub-committee to the American Senate on, 19,659–60, 19,662–3. America and England, legal decisions upon "commercial gambling" in, 19,631–2, 19,636–9. America, proposed legislation on the systems of options and futures in, 15,637–8, 15,686–94, 19,633–4, 19,654. American evidence on grades of wheat, 15,635–6. Argentina, legislation by, 19,657. Basis of operation in wheat contracts, 15,633–4; basis of the various settlements of wheat, cotton and the Stock Exchange, 15,594. Bears and bulls, 19,818; bears, professional, 15,660–1; bulls as speculators, 15,658; classes of, 15,668–70; losses by, 15,667; necessity for, 15,671–6; the power of bears over, 19,731–2. Capital, importers, 15,664–5. Cattle, depreciation in price of, 19,899–901. Cause of the present low prices, 15,662–3, 15,679–80. Classes of wheat affected by gambling, 19,677–82, 19,861–4. Comparison between pig-iron gambling and Stock Exchange gambling, 15,646–8. Compulsory delivery, 15,612–16. Continental legislation, 19,654. Contracts, English, 15,715–6; minimum grade on, 19,686–7; reasons for alterations in systems and, 19,631; stamps and registration of, 19,657. Corner in cotton in Liverpool, 1883, 19,702–4. Corners in wheat, 19,663, 19,696; explanation of, 15,628–32. Cotton panic, 1878, 19,630. Daily settlement in the grain market, 19,743–7. Decline of markets in the interest of importers and bears, 15,651, 15,656. Demand and supply *versus* the systems, 19,813–14. Difference between gambling in pig-iron warrants and options and futures, 15,577–80, 15,639–45, 15,779; between stock exchange gambling and the systems, 15,608–11, 15,780–90, 15,794–8, 19,652–4, 19,711–23. Disastrous market speculations, instances of, 15,680. Effect of a panic, on importers with small capital, 15,704–5; on importers and operators, 15,706–7. Effect of low prices on the nation, 19,875–6; on Wales, 19,898; on wheat production, 19,872–4; of the abolition of the systems, 15,791–3; of the systems on the price of wheat, 15,729–36, 15,745–48; of wheat production on speculators, 19,865–71; on English traders and importers, of an anti-future bill, 15,703; on prices, of Stock Exchange transactions, 19,733–42, 19,748–57, 19,794–812, 19,846–52; on the producer by the systems, 19,790–3. Estimated wheat product of the world in 1882, 15,736–9; and in 1893, 15,740–2. Experience of the "options and futures" systems, 15,572–6. Explanation of a transaction, 15,652, 19,639; of contracts under the systems, 15,595–607; of cornering and the tendering clause on contracts, 15,621–2; of margins and differences, 15,617–20; of the option, future and settlement systems, 15,588–90; of the present systems, 15,591–3. Fall in the price of wheat, 19,853–60; in the value of wheat, 15,666, 15,677–

8. Farmers of the world, loss to the, by depreciation in wheat, 19,895–6. Foreign wheat and flour, importers of, 19,758–62. Future contracts, in flour, 19,659–60; values regulated by, 19,688–95, 19,705–10. Futures, amount of grain covered by, 19,773–4; and options in the London clearing house, 19,784–5; manipulation of, 15,656; sales of, in New York, 19,658–60; and re-sales of, 19,724–30. Gamblers and middlemen, profits of, 15,759–75. Gambling, in pig-iron, proposed legislation on, 15,638; in sugar, 15,583–6, 19,630; on the Stock Exchange, compared with the systems from an agricultural point of view, 15,581–2, 15,608–11. Gold, 15,682–3. Graded wheat, 15,623–7. Growth of the system, 15,576–7. Importer and banker, operation between, 15,654. Importers, hedging by, 15,657. Importers' capital, 15,664–5. Imports of foreign wheat and flour, 19,758–62, 19,821–9, 19,837–45, 19,902–10. Legal decisions in America and England, 19,631, 19,636–9. Legislation by America to counteract the effect of the systems, proposed, 15,686–700, 19,633–5; (*a*) anti-option bill in the House of Representatives, 15,695–700, 15,717–28, 19,654; (*b*) and stamps, 15,714–6; (*c*) probable effect on England of the, 15,701–3. Legislation by Argentina, 19,657; Belgium, 19,657; England (suggested), 19,775; France, 15,710, 69,655; Germany, 19,656; Russia, 19,655. Legitimate speculation, 15,587. Liverpool, contracts and the price of wheat, 19,660; amount of wheat under contract in, 19,664–76. Middlemen, 19,659–60; and gamblers, profits of the, 19,759–75. Options and futures, contracts, values regulated by, 19,688–95, 19,705–10; difference between gambling in pig-iron warrants and, 15,777–80, 15,639–45, 15,779–90; between Stock Exchange gambling and, 19,652–4, 19,711–23; experience of the systems of, 15,572–5; explanation of the systems of, 15,588–90; growth of the systems of, 15,676; in the London clearing house, 19,784–9; probable effect of the abolition of the systems of, 15,708–9. Population and consumption, 19,772, 19,832–6; and production of wheat compared, 15,685. Price, of cattle, depreciation in, 19,899–901; English wheat, 19,882–6, 19,853–60; effect of the systems on, 15,729–36, 15,745–58; and on Liverpool contracts, 19,660. Prices, and the supply of wheat and flour, 19,763–71; effect of low, (*a*) on wheat production, 19,872–7; (*b*) on the nation, 19,875–6; (*c*) on Wales, 19,898; effect of the systems on, 19,794–812, 19,846–52; general result on, under the systems, 15,661; the world's supplies and, 19,845–6. Production, cost of, 19,877–81. Profits of middlemen and gamblers, 15,759–75. Report of the sub-committee to the American senate on agricultural depression, 19,659–60, 19,662–3. Settlement of differences, on futures, 19,815–7. Silver, 15,681. Stock Exchange gambling and Stock Exchange transactions, 15,581–2, 15,594, 15,646–9 19,733–55; and the systems of options and futures, 15,607–11, 15,779–90, 15,794–8, 19,652–4, 19,711–23. Sugar gambling, 15,583–4. Supply and demand *versus* the systems of options and futures, 19,813–4. Systems of options and futures, the, *see* options and futures. Wheat, amount of, under contract in Liverpool, 19,664–76; and flour, imports of foreign, 19,758–62; and statistics of, 19,821–9, 19,837–45, 19,902–10; the supply of, and prices, 19,763–71, 19,830–2; wheat, classes of, affected by gambling, 19,677–85, 19,861–4; consumption of in the United Kingdom, 15,776–8; contracts, 19,639; corners in, 19,663, 19,696–701; effect of low prices of, (*a*) on the nation, 19,875–6; (*b*) on Wales, 19,898; effect of the systems on the price of, 15,729–36, 15,745–58; fall in the value of, 15,666, 15,677–8, 19,853–60; growing in South America, 19,887–94; Liverpool contracts and the price of, 19,659–60; loss to the farmers of the world by depreciation in, 19,895–6; price of English, 19,882–6; production, effect of low prices on, 19,872–4; effect of, on speculators, 19,865–71, estimated wheat production of the world, 15,737–42; requirements, 15,743–4.

Index to Evidence.

SIR GABRIEL GOLDNEY, landowner in Wiltshire.

Accounts of a farm, 15,823–6, 15,872–82, 15,925–6. Agricultural Holdings Act, 15,839; compensation under the, 15,840–1. Buildings, outlay on, 15,830–1. Capital, interest on, 15,815–7; want of, 15,829, 15,839, 15,866–71, 15,915–8, 15,921–4; and freedom of contract, 15,842–6, 15,919–20. Characteristics of farms, 15,803–6. Compensation, 15,840–1. Culture, mode of, 15,807–8. Dairying, 15,887–91. Farm accounts, 15,823–6, 15,872–82, 15,925–6. Farming, profits from, 15,809–10, 15,837–8, 15,843–57, 15,927–8; results of, on two farms, compared, 15,892–910; system of, 15,818–22, 15,827–8. Farms, characteristics of, 15,833–6. Freedom of contract, 15,842–6, 15,919–20; of sale, 15,883–6. Ground game, 15,847. Interest on capital, 15,815–17. Land in hand, extent of, 15,801; productive power of, 15,858–65. Leasehold tenures, 15,911–14. Rent, reduction of, 15,832–6. Sale, freedom of, 15,883–6. Tithes, 15,929.

MR. CLARE SEWELL READ, tenant farmer, Norfolk.

Agricultural depression, 15,952–64 Agricultural Holdings Act, 16,077–118, 16,140–3, 16,228–82, 16,366–88, 16,512–14, 16,658; amendments suggested, 16,090–8, 16,107–8. America, competition with, 16,072–3; wheat, growing in 16,355–8; report on, to the Duke of Richmond's Commission, 16,071–2, Arbitration, 16,086–9. Artificial food and manures, 16,162–5. Bad seasons, 15,952–5. Barley, the malt tax and the price of, 16,638–43. Beer, 16,644–8. Butter making, 16,210, 16,218; price of, 16,171–4, 16,201–9. Cattle disease, 16,297–313. Cattle slaughter of foreign, 16,664–6. Claims, and counterclaims, 16,078–85, 16,232–43, 16,377–88, 16,515–28; by tenants for compensation, 16,244–62; by landlords, 16,372–6. Compensation, for high farming, 16,099–105, 16,144–52, 16,398–432, 16,453–5, 16,529–37; for home-grown corn and produce, 16,106–7, 16,435–49, 16,480–3; for improvements, 16,667–77; for land laid down to grass, 16,450–2, 16,573–86. Competition with America, 16,072–3. Condition of Agriculture before, 1879, 16,649–51. Condition of labourers, 16,020–6. Corn returns, 16,004–5. Cost of artificial food and manures, 16,162–5, Cost of labour, 16,027–8, 16,153–61, 16,177–83, 16,496–509. Change in system of cultivation, 16,484; cultivation restricted, 16,109–11. Currency, the, 16,359–65, 16,456–79, 16,652–3. Depression in Norfolk, 15,955–64, 16,314–23, Description of farms, 15,936–46. Deterioration in farming, 16,044–9, 16,216–7, 16,568–72. Distress, law of, 16,270–82, 16,606–7, 16,660–3. Duty on wheat, 16,073–6. Entails and mortgages, 16,613–8, Estates, management of, 16,608–12. Expenses of farming, 16,153–70, 16,495–509. Fall in prices, 16,340–5, 16,593–5. Farming, deterioration in, 16,044–9, 16,216–7, 16,568–72; expenses of. 16,153–70, 16,495–509; in Norfolk, 16,050–70, 16,623–5; results of, 15,978. Farms, description of, 15,936–46; letting of 16,600–1; rents of, 15,947–51; scheduling the condition of, 16,389–97; sizes of, 16,171; sub-division, 16,006–7. Feeding-stuffs and Fertilisers Act. 16,419. Ground game, 16,136–9, 16,602–5. Horse breeding, 16,485–6. Importation of flour, 16,073–4. Income tax, 15,965–77, 16,175–6. Judicial rents, 16,112–6. Labour, cost of, 16,027–8, 16,153–61, 16,177–83, 16,496–509; juvenile, 16,018–19; women's, 16,018–9; Labourers, condition of, 16,020–6, 16,510–11, cottages, 16,189–90. Land, in Norfolk, value of, 16,492–4, 16,654–7; laid down to grass, 16,008, 16,450–2; tax, 16,553–57; uncultivated, 16,031–43. Landlords' claims, 16,372–6. Law of distress, 16,117–8, 16,270–82, 16,606–7, 17,660–3. Leases, 16,598. Letting of farms, 16,800–1. Live weight, sale by, 16,283–96. Rental, 22,557–61. Royal Commission on Agriculture, 22,615–26. Slaughter of foreign cattle, 22,612–4. Small holdings, 22,572–3, 22,766. State loans for building cottages, 22,673–4. Tenancy, changes of, 22,767. Tenant's capital, 22,768–70; condition of, 22,743. Tenure of holdings, 22,602–4, 22,762.

Mr. WILLIAM SCOTT FERGUSON, tenant farmer, Perth.

Agricultural Holdings Act, 22,940–71, 23,083–4, 23,113. Bad seasons, 22,898. Barley, decreased acreage under, 23,278–9. Cattle, breeding, 23,032–43, 23,091–9; Canadian importation of, 23,267–73; foreign importation of, 22,979–81, 22,992; sale of, by auction, 22,995–23,006. Claims and counter-claims, 23,008–90. Compensation, agreement for, 23,145; for disturbance, 23,209–14. Competition, foreign, 22,896–7. Condition of farmers, 22,800–14. Cultivation, condition of, 22,915–33; system of, 22,844–57, 23,024–5, 23,062–82. Disease in turnips, 23,026–31. Farmers, condition of, 22,800–14. Farming, result of, 22,858–62. Farms, demand for, 22,836–43; repairs, 23,256–8; witness' particulars of, 22,863–77. Ground game, 22,959–62. Hypothec, the law of, 23,103. Improvements, 22,954–8; of foreign cattle and foreign breeding, 22,966–74. Income tax, 23,259–63. Labour, cost of, 22,911–3; reduced, 22,878–95, 22,914–7, 23,155, 23,264–6. Land laid down to grass, 23,015–23. Leases, 22,982–91, 23,222; and variation prices, 23,047–61. Loans, 23,181–92, 23,219–21. Malt tax, 23,134–9, 23,241–52. Manures, 22,878–95. Meat, foreign, the marking of, 23,044–6. Particulars of witness' farms, 22,863–77. Population rural, 23,155–70. Potatoes, duty on, in America, 22,910. Prices, 22,899–909; reduction in, 23,229–30; variation and leases, 23,047–61. Profits middleman's, 23,215–8. Rates, 23,124–5, 23,171–80, 23,253–5; poor, 23,126–33; railway, 23,007–14. Referees, official, 22,948–53, 23,085–7, 23,113–8, Rent, 23,193–206; judicial, 22,963–5; reduction of 22,815–35, 22,975–8, 23,108–10, 23,231–40. Sale, freedom of, 23,111–2; of live weight, 23,100–2, 23,274–7. Small Holdings Act, 23,140. Soil, inherent capabilities of, 23,151–4. Tenure, security of, 25,207–8. Valuations, 23,119–23.

General Sir ARTHUR COTTON, K.C.S.I., late of the Royal Engineers.

Capital and labour, increased employment of, 23,332–6. Cost of process, 23,314–22. Cultivation, process of and result of experiments, 23,288–93, 23,324–31, 23,341–52. Process, cost of, 23,314–32. Production, increased capacity of, 23,283–7. Rye grass, 23,312–3. Wheat, 23,299–311; liability to fall, 23,339–40; liability to mildew, 23,337–8.

Mr. WILLIAM HENRY CLARKE, land agent, Cambridgeshire.

Agricultural labourers and small holders compared, 23,535–9. Agriculture, condition of, 23,353–4. Arbitration, cost of, 23,498–9. Condition of agriculture, 23,353–4. Copyholds, 23,404; enfranchisement of, 23,405–32, 23,487–90. Cost of arbitration, 23,498–9; Cultivation of small holdings, 23,436–40, 23,454–73; system of, 23,359–65. Depopulation, rural, 23,547–52. Drainage and roads, 23,385–403, 23,441–5. Farmers and small holders compared, 23,479–82. Highway rates, 23,522–9. Labour, 23,380–3. Land, fen, value of, 23,542–6. Owners and occupiers compared, 23,474–8, 23,530–4. Potatoes, 23,483–6. Rates and taxes, 23,366–7, 23,451–3; highway, 23,522–9. Rents, 23,368–73, 23,447–50, 23,491–7; reduction of, 23,374–9, 23,384. Roads, 23,516–21; and drainage, 23,385–403, 23,441–5. Rural depopulation, 23,547–52. Small holders, 23,355–8, 23,433–5, 23,500–15, and agricultural labourers compared, 23,535–9; and farmers compared, 23,479–82. Small holdings, 23,446; cultivation of, 23,436–40, 23,454–73. System of cultivation, 23,359–65. Value of fen land, 23,542–6. Water carriage, 23,540–1.

Professor HERBERT SOMERTON FOXWELL, Fellow of St. John's College, Cambridge.

Agio, effect of, 24,179–216. Agriculture, depression, 23,720–2; effect on, of divergence in ratio of gold and silver, 23,683–6; of grants of free lots, 23,714–7. Appreciation of gold, 23,627–8, 23,701–5. Bank of England, purchases of bullion by, 26,577–93. Banking and currency, 23,553–5. Bimetallic rates, 23,862–70. Bimetallism, 26,859–81, 27,039–45; abandonment of, 23,931–5, 24,012–6, 24,020–59; adoption of, 23,853–60; and depositors at banks, 27,184–6; and Great Britain, 27,188–9; and a mint charge, 24,170–8; and paper currency, 23,871–2; and prices, 23,911, 23,916–7, 23,927–30, 24,126–46, 26,829–41; and trade unionism, 27,004–12; effect of, 27,148–65; on gold and silver, 24,087–121, 26,607–23, 26,973–83, 27,084–96; on past and future contracts, 27,063; experience in, 26,951–9; functions of precious metals under, 27,064–8; intention of, 26,519–25; in England, 23,822–34; international, 27,190–7; money contracts and, 27,198–210; objects of, 26,940, 27,023; practicability of, 24,274–9; reasons for advocating, 23,838; system, 24,122–6, 27,241–5; transmission from monometallism, 26,543–8; views of economists, 23,666–7, 26,624–48; of Wolowski, 26,649–58. Bimetallists, proposal of, 24,080–6. Bullion, purchases of, 26,577–93. Changes of standard money, 27,214–20. Cessation of French mintage of silver, 23,873–83. Closing of French mints, 23,605–7; of Indian, 23,608–9. Contracts in money, 27,198–210; past and future, 27,039–45, 27,063; consumption of silver, 23,835–7. Condition of county compared, 26,773–7; of labourers, 26,987–9. Currency and

banking, 23,553–5. Demand for gold, 26,892–5. 26,919–30; for money, 26,594–606. Difference between mint rates and market rates, effect of, 26,526-42. Depression, agriculture, 23,720–2. Effect of an agio, 24,179–216; of fall in gold value, 23,687–700; of appreciation in gold, 23,701–5; 23,790–7; of the monetary changes, 23,621–6, 26,761–72; of ratio, 24,338–69; on agriculture of divergence in gold and silver, 23,683–6; of grants of free lots, 23 717–4; on appreciation of gold on debtors and creditors, 23,798–802 26,790–804*a*, 27,013–22; on labour, 23,803–14; on silver, 23,709–13; of adoption of bimetallism probable, 23,853–60. Fall in prices, 23,556–70, 23,679–82, 23,861, 23,918–21, 26,778–89, 26,896–909, 26,981–7; and bimetallism, 23,916–7, 23,927–30; due to appreciation in gold, 23,706–7; effect of, on production, 23,889–910. Fixity of ratio impossible, 23,842–4. Fluctuation of prices, causes of, 23,573–90. Free mintage of gold and silver, 23,749–52; effect of, 23,753–6. Freights, cheapening of, 23,718–9. French bimetallic mints, influence of, 23,757–76; mintage of silver, cessation, 23,873–83; mints closing, 23,605–7, 23,996–24,005; premium on silver, 24,217–24; views on bimetallism, 23,666–7. "Futures and options," 27,187. Gold, appreciation of, 23,627–8; and landlords, 26,960–72; authorities for, 23,639–65; on real property, 26,946–9; demand for, 24,012–59, 24,087–121, 26,892–5, 26,919–30; contracts in, 26,859–81; effect of appreciation of, 23,701–5, 23,790–7, 26,790–804*a*; on debtors and creditors, 23,798–802, 26,790–804*a*, 27,013–22; of extension of credit, 23,816; on labour, 23,803–14; of fall in value, 23,687–700; of diminution of purchasing power, 26,494–502; production of, 23,672–8, 24,147–61; output, 26,910–8; prices, depreciation of, 26,702–21; standard, adoption of, 23,608–9, 23,610–12, 23,884–8; introduction of, 24,280–95; supply of, from Africa, 23,668–71. Gold and silver, divergence of relative values, 23,629–38; free mintage, 23,749–56; in existence, weight of, 27,030–1; increased prices of, 27,052–6; relative production of, 23,777–82, 23,845–7; ratio between mint and market, 26,882–91; relative value of, 24,162–9; stability of ratio between, 23,839–41; supersession of, 24,225–32, 24,239–68. Gold and Silver Commission, inquiry by, 26,659–79; opinion of, 24,296–312. Great Britain and bimetallism, 27,188–9. Imports, effect of cheap, 26,943–5. Indian mints, closing of, 23,608–9; monetary legislation, 27,046–51, 27,211–13. International bimetallism, 27,190–7. Labour and fall of prices, 26,950; condition of, 26,722–32, 26,748–57, 26,842–49*a*, 26,987–9; effect of appreciation of gold on, 23,833–14; of depreciation, 26,702–21; increased employment for, 26,758–60; prices of, 23,815. Labouring classes, condition of, 26,778–89. Landlords and appreciation of gold, 26,960–72. Latin Union, the, 23,613–20. Legal tender, 24,269–73, 27,246–7; law of, 26,556–70, 27,069–72. Metals, effect of relative production of, on the ratio, 23,848–52. Mint changes, effect of, on prices, 23,591–603, 23,621–6, 26,761–72; charges and bimetallism, 24,170–8; open, effects of, 24,060–79; operations of, 26,549–51, 26,571–6. Money changes in standard in, 27,057–62; demands for, 26,594–606. Monetary changes in United States, 24,006–11; legislation in India, 27,046–51, 27,211–3; difficulties, 27,000–3. Open mints, 27,073–83; effect of, 24,066–79. Panic of 1873, 23,922–6. Paper currency countries and bimetallism, 23,871–2. Pauperism, course of, 26,733–42; diminution of, 26,990–9. Population, increase of, 26,743–7. Precious metals, demand for, 27,073–83. Prices and bimetallism, 23,911, 24,126–46; course of, 26,984–6; effect of monetary changes on, 23,591–603; fall in, 23,679–82, 23,861, 23,912–5, 23,918–21; fall in, due to appreciation of gold, 23,706–7; effect on production, 23,889–910; fall in, on exports and imports, 23,556, 26,805–28; fluctuation in, 23,573–90; general course of, since 1817, 23,571–2; influence of bimetallism rates on, 23,862–70; of labour, 23,815; relative stability of, 26,680–701; rise in, 26,842–49*a*; wholesale fall in, 23,556–70. Production of gold, 23,672–8; of silver, 23,783–4; of silver annual, 23,785–9; relative, of gold and silver, 23,777–82, 23,845–7. Proportion of credit to coin, 23,816–21. Rates, effect of, 24,338–69; change in, on gold prices, 26,452–93, 26,503–18; mint and market, 26,526–42; stability of, 23,757–76. Ratio climbing, 26,851–8, 27,098–113, 27,172–4; determination of, 26,850, 27,024–8; effect of a, 27,029, 27,032–8, 27,221–30; effect of a reduction of, 27,175–83; maintenance of, 27,166–71; mint and market, 26,882–91, 27,231–40. Silver coinage, suspension of, 23,608–9, 23,936–64; consumption of, 23,835–7; effect on, 23,709–10; fall in, 24,147–61; fall in gold value of, 27,114–8; French premium on, 24,217–24; production of, 23,783–4, 23,785–9, 27,119–29, 27,130–47; demonetisation, 23,604, 23,708, 23,723–48, 23,965–95. Standards, money changes of, 27,214–20. Trade unions and bimetallism, 27,004–12. United States, money changes in, 24,006–11; period of inconvertible paper in, 24,233–8. Views of foreign economists, 24,313–6; as to the ratio to be adopted, 24,317–37. Wages, course of since 1873, 26,722–32; and prices compared, 26,938–9. Weight of gold and silver estimated, 27,030–1. Wolowski's views, 26,649–58.

Mr. ANDREW HUTCHESON, tenant farmer, Perth.

Agricultural, education, 24,491–23, 24,551–63; Holdings Act, 24,455–62, 24,525, 24,578–81, 24,612–3, 24,671. Bailiff's salary, 24,799–802. Bi-metallism, 24,450–4, 24,513–9, 24,662–5, 24,747–52. Capital, tenants', 24,382–3, 24,786–98. Cattle, Canadian, importation of, 24,436–49, 24,500–2, 24,594–611, 24,666–70, 24,704–16. Changes of tenancy, 24,405–6. Compensation, 24,672–5; for grass land, 24,618–21; for home-grown produce, 24,587, 24,658–9; scale of, 24,463–4, 24,530–40, 24,730–2. Condition of farms, 24,588, 24,733–5; of labourers, 24,409–26, 24,771–5. Cost of labour, 24,540–7. Cultivation, deterioration in, 24,901; land out of, 24,625–7, 24,736–41; restriction on, 24,465–7, 24,575–7, 24,582–4. Dairying, 24,493–5, 24,651–7. Fall in prices, 24,639–47. Farming prospects of, 24,781–5; farms, competition for, 24,503–12, 24,543–5; condition of, 24,588, 24,733–5; large and small compared, 24,569, 24,695; letting of, 24,407–8, 24,520–4, 24,564–8; purchase of, 24,394–400; size of, 24,694. Fertilisers Act, 24,483, 24,541–2. Foreign meat marking, 24,717–19. Home-grown produce, compensation for, 24,587, 24,658–9. APPENDIX A.

APPENDIX I.

(*Handed in by Mr. Punchard, see Question* 15,184.)

THIS INDENTURE made the day of 18 between the RIGHT HONOURABLE THOMAS TAYLOUR EARL OF BECTIVE (herein-after called "the Lessor") of the one part and

(herein-after called "the Lessee") of the other part WITNESSETH that in consideration of the rents herein-after reserved and the covenants on the part of the Lessee herein-after contained The Lessor in exercise of a power for this purpose to him given by the Will dated the 2nd day of March 1853 and proved in the Prerogative Court of Canterbury on the 2nd day of June 1854 of William Thompson deceased and of every or any statutory or other power enabling him in this behalf doth hereby demise and lease unto the Lessee his executors administrators and licensed assigns All that messuage or dwelling-house called or known as

together with the several buildings held and enjoyed therewith and all those lands and hereditaments described in the Second Schedule hereunder written except and reserving unto the Lessor and his assigns and other the person or persons for the time being entitled to the said premises in reversion immediately expectant on the determination of the tenancy hereby created (all of whom are herein-after included in the expression "the Reversioner or Reversioners") all mines and minerals woods underwoods trees and plantations on the said premises with power to dig for cut down and carry away the same respectively without making any compensation to the Lessee for so doing And also except and reserving unto the Reversioner or Reversioners all game wild fowl and fish upon the said premises with liberty for him and them and his and their friends and servants to hunt course shoot take and destroy the same upon the said premises at all times during the said tenancy as regards game other than hares and rabbits exclusively and as regards hares and rabbits concurrently with any other person or persons for the time being legally entitled to the same or the like right To have and to hold the said hereby demised premises (except and reserved as aforesaid) unto the Lessee his executors administrators and licensed assigns for one year from the 14th day of February 18 and so on from year to year until the tenancy is determined at the end of any year thereof either by the Reversioner or Reversioners giving to the Lessee his executors administrators or licensed assigns or the Lessee his executors administrators or licensed assigns giving to the Reversioner or Reversioners six calendar months previous notice in writing yielding and paying therefor unto the Reversioner or Reversioners the clear yearly rent of
by equal quarterly payments on the 12th day of May the 12th day of August the 11th day of November and the 14th day of February such rent to be payable (if demanded) yearly in advance during the continuance of the said tenancy And also yielding and paying during the said tenancy unto the Reversioner or Reversioners as an additional rearly rent such a sum as shall be certified in writing by the Reversioner or Reversioners or his or their Agent to be the apportioned amount of the annual rentcharge for drainage or other improvements payable to the Land Loan and Enfranchisement Company or to some other company or body of the like kind in respect of improvements executed upon the said premises hereby demised during the tenancy such last-mentioned rent to be payable by equal quarterly payments on the said quarterly days herein-before mentioned and the first quarterly payment or a proportionate part thereof to be made on the first of the said quarterly days which shall next happen after the amount so payable shall have been so certified as aforesaid And also yielding and paying unto the Reversioner or Reversioners in the event of and immediately upon the said tenancy being determined by re-entry under the proviso therefor herein-after contained a proportionate part of the said several rents hereby reserved for the fraction for the current quarter up to the day of such re-entry And the lessee doth hereby for himself his heirs executors administrators and assigns covenant with the Reversioner or Reversioners in manner following that is to say that he the Lessee his executors administrators or assigns will pay to the Reversioner or Reversioners the said several rents at the times and in manner aforesaid And will also pay all rates duties taxes charges assessments impositions and outgoings whatsoever now or hereafter to be assessed or imposed upon or payable in respect of the said demised premises or any part thereof (tithe or rent charge in lieu of tithe land tax lord's rent and landlord's property tax only excepted) And that he the Lessee his executors administrators and assigns shall not nor will underlet assign over or part with the possession of the premises or any part thereof without the consent in writing of the Reversioner or Reversioners first obtained for that purpose And shall not nor will sell dispose of or carry away from the premises any hay grass root crops winter eatage straw or other vestures or any manure or compost but shall and will consume the same on the premises and shall and will leave the manure produced during the year preceding the determination of the tenancy for the use of the Reversioner or Reversioners or the incoming tenant (as the case may be) without receiving or claiming any compensation for the same And that for and in respect of any such hay straw grass or root crops which shall be sold with the consent in writing of the Reversioner or Reversioners there shall be due and payable from the Lessee his executors administrators or assigns to the Reversioner or Reversioners one third of the sum realised by such sale unless within three calendar months after such sale an equivalent in manure for the hay straw grass or root crops so sold shall have been laid or spread upon the Farm And also that he the Lessee his executors administrators and assigns shall not nor will in the last year of the tenancy after the corn crop shall have been taken off turn any stock upon the young clover or grass sown with the summer corn in the preceding spring but will cover such crop with manure in a proper and husbandlike manner after the corn crop has been removed And shall not nor will in the last year of the tenancy take in any horses for grazing or agistment or any part of the lands hereby demised And shall not nor will fell or otherwise damage or allow to be damaged by any cattle or otherwise the timber trees and fruit trees belonging to the premises but shall and will keep the same uninjured and shall not nor will lop top nor cut down the same for any use or purpose whatsoever without the previous consent in writing of the Reversioner or Reversioners his or their Agent And shall not nor will without the consent in writing of the Reversioner or Reversioners or his or their Agent as aforesaid break up any of the grass or pasture land nor mow any part thereof more than once in any one year and shall manage the arable land in a husbandlike manner and shall not take two white straw crops in succession from the same land And also that he the Lessee his executors administrators and assigns will keep down all thistles docks and other weeds and destroy all moles and dress down and spread all mole heaps on the said farm And also that he the Lessee or his licensed assigns will personally reside upon the said premises and will not put or store any wool corn potatoes oil cake or anything of the like nature in the dwelling-house hereby demised or any part thereof And also that he the Lessee his executors administrators and assigns will keep and at the determination of the tenancy deliver up in tenantable repair and condition the said messuage or dwelling-house and buildings (such repair to include all doors and windows) and also all gates hedges fences stone walls roads embankments pumps and water pipes on the demised premises And also will keep clear and in working order all drains on any part of the premises hereby demised and clean out regularly and keep clear all open watercourses ditches and outlets to drains upon or belonging to the said premises And shall and will regularly and in proper succession cut lay plash and dyke up with soil in a workmanlike manner such lengths of thorn or live hedges as require the same and allow no gaps therein And shall not nor will allow any of his or their cattle sheep pigs or horses to trespass in any woods plantations or coppices belonging to the Rever-

Appendix A. I.

sioner or Reversioners but shall and will give immediate notice to the Reversioner or Reversioners or his or their Agent Forester or Gamekeeper of any breaches or gaps in the fences of such woods plantations and coppices as adjoin or are intermixed with the farm hereby demised And also that he the Lessee his executors administrators or assigns shall and will at the determination of the tenancy give up to the Reversioner or Reversioners or the incoming tenant as the case may be possession of the land and part of the farmhouse buildings and yards hereby demised on the 14th day of February and of the remaining part of the farmhouse buildings and yards on the 12th day of May then next following and will allow the Reversioner or Reversioners or incoming tenant to enter upon the land to be planted with turnips or root crops at any times after the 1st day of October immediately preceding the determination of the said tenancy to do all acts of husbandry necessary or convenient for the next year's crops, doing as little damage as may be and to have the use of stabling for two horses and room for one man from the 10th day of October previous to the determination of the tenancy until the determination thereof And also shall and will do days' carting with horses in each year for the Reversioner or Reversioners free of any charge And shall and will cart all materials required for the erection or repair of buildings fences and fence walls and all drain pipes for the drainage of the land hereby demised free of any charge And also that it shall be lawful for the Reversioner or Reversioners at all times to enter upon the said hereby demised premises to view and examine the state of repair and cultivation thereof and to give notice in writing to the Lessee his executors administrators or assigns of any neglect or breach of any of the above-stated covenants and requiring the same to be amended and that in the event of such notice not being complied with within a reasonable time the Reversioner or Reversioners shall be at liberty to send workmen to effect such amendments and shall be entitled to recover the cost thereof from the Lessee his executors administrators or assigns in the same way as rent in arrear is now recoverable And that for the purpose of the ascertainment of the amount of any compensation which the Lessee his executors administrators or licensed assigns may be entitled to under the provisions herein-after contained with respect to the matters specified in the First Schedule hereto the Lessee his executors administrators and assigns shall and will submit to the Reversioner or Reversioners or his or their Agent on or before the 1st day of February immediately preceding the determination of the tenancy a statement in writing specifying the particular improvements or matters in respect whereof compensation is claimed under the said provisions accompanied with all vouchers bills or invoices referring to the improvements or matters for which compensation is so claimed and further that the Lessee his executors administrators and assigns shall and will allow the Reversioner or Reversioners his or their Agent at any time to take samples of any cakes feeding stuffs or manures in respect of which compensation may be claimable under the said provisions for the purpose of having the same analysed and examined Provided always that if and whenever any part of the said several rents herein-before reserved shall be in arrear for 21 days after any of the days of payment whether legally demanded or not or if and whenever the Lessee his executors administrators or assigns or any of them shall be adjudged bankrupt or have a Receiving Order in Bankruptcy made against him or them whether on his or their own petition or on the petition of any creditor or creditors of him or them or make any composition or arrangement with his or their creditors or if and whenever any execution shall be levied upon his or their goods or chattels or upon the said premises or if and whenever there shall be any breach of any of the covenants by the Lessee herein contained then and in any or either of the said cases it shall be lawful for the Reversioner or Reversioners to re-enter upon the premises or any part thereof in the name of the whole and to repossess and enjoy the same as if these presents had not been made And the Lessor doth hereby covenant with the Lessee that the Lessee his executors administrators and licensed assigns paying the said several rents on the days and in manner aforesaid and performing and observing the several covenants by the Lessee herein contained shall quietly hold and enjoy the premises hereby demised during the said tenancy without any interruption by the Lessor or any person rightfully claiming through or in trust for him or under the Will of the said William Thompson deceased And also that the Reversioner or Reversioners shall and will allow the Lessee his executors administrators or licensed assigns to have the use of a part of the house buildings and yard until the 12th day of May next after the determination of the tenancy if determined by notice and not by re-entry And also that if the hay produced from the preceding year's crops shall not have been consumed by such 12th day of May the Reversioner or Reversioners or the incoming tenant (as the case may be) shall and will allow the Lessee his executors administrators or licensed assigns a fair spending price for the same And also shall and will allow to the Lessee his executors administrators or licensed assigns the amount paid by him or them for the grass and clover seeds sown in the last year of the tenancy provided such seed crops shall have been treated in the manner herein-before specified And also that the Reversioner or Reversioners shall and will pay to the Lessee his executors administrators or licensed assigns at the determination of the tenancy compensation for such of the improvements and matters specified in the First Schedule hereto as the Lessee his executors administrators or licensed assigns shall have executed made or done on the premises during the tenancy such compensation to be calculated and ascertained at and after the rates specified in the said First Schedule hereto and in accordance with and subject to the definitions and conditions contained in the headings and footnotes to such Schedule and to the provisoes herein after contained which compensation the Lessee hereby agrees and declares is fair and reasonable and is hereby substituted for any compensation he or his executors administrators or licensed assigns would or might otherwise be entitled to under the Agricultural Holdings (England) Act 1883 in respect of any of the said improvments or matters Provided always that no compensation shall be payable in respect of any improvement which shall be executed by the Lessee his executors administrators or assigns in consideration that the Reversioner or Reversioners have paid or agreed to pay some agreed portion of the cost thereof and where (in the last-mentioned case) the Reversioner or Reversioners have in fact paid such agreed portion of the cost nor in respect of any improvement which shall be executed by the Lessee his executors administrators or assigns in consideration that the Reversioner or Reversioners have executed or agreed to execute some other improvement and where (in the last-mentioned case) the Reversioner or Reversioners have in fact executed such other improvement and provided further that in cases not included in the preceding proviso whenever the Reversioner or Reversioners shall during the tenancy have executed at his or their own cost on the premises hereby demised any improvement of any of the kinds specified in the said First Schedule hereto it shall for the purpose of ascertaining the amount of compensation payable to the Lessee his executors administrators or licensed assigns be implied and conclusively presumed that such improvement was so executed in consideration that the Lessee his executors administrators or assigns would execute some other improvement of one of the kinds specified in the said First Schedule and of equal manurial value to the improvement so executed by the Reversioner or Reversioners and there shall be deducted from the compensation which would but for this proviso be payable to the Lessee his executors administrators or licensed assigns a sum equal to the value (to be assessed in accordance with the First Schedule hereto) of the improvement so executed by the Reversioner or Reversioners And it is hereby agreed and declared that the custom of the country and Section 33 of the Agricultural Holdings (England) Act 1883 shall not apply to the tenancy hereby created And it is hereby lastly agreed and declared that any difference arising between the Reversioner or Reversioners on the one hand and the Lessee his executors administrators or assigns on the other hand relative or with respect to compensation for improvements and the amounts of all compensation allowances payments deductions set-offs and valuations to which either party may claim to be entitled either under these presents or under the Agricultural Holdings (England) Act 1883 shall be ascertained and settled by a reference in manner provided by the said Agricultural Holdings (England) Act 1883 except that there shall be no appeal in any case to the County Court and that the provisions of Sections 7 and 23 of the said Act relating respectively to notices and appeals to the County Court and the provisions of Section 10 of the said Act relating to the appointment of Umpires shall not apply to the tenancy created by these presents In

witness whereof the said parties to these presents have hereunto set their hands and seals the day and year first above written.

The FIRST SCHEDULE above referred to.

Improvement.	Land applied to	Proportion of Cost to be allowed as Compensation the Cost being that for Delivery at the nearest Railway Station or Warehouse and to include nothing for carting by the Lessee.
Lime except gas lime	Pasture land	Cost less $\frac{1}{7}$th for each crop grown after application.
Ditto ditto	Meadow	Half after first crop $\frac{3}{10}$ths after 2nd $\frac{1}{5}$th after 3rd crop grown after application.
Ditto ditto	Arable land	Cost less $\frac{1}{7}$th for each of first 3 years and $\frac{1}{10}$th for each of next 3 years provided not more than two crops of corn have been grown since application. In the latter event no compensation will be payable.
Bones raw $\frac{1}{2}$ in. or $\frac{1}{4}$ in.	Permanent pasture	Cost less $\frac{1}{7}$th for each crop after application.
Ditto boiled or meal undissolved	Ditto	Cost less $\frac{1}{7}$th ditto.
Ditto ditto	Arable or meadow	Half after 1st crop $\frac{3}{10}$ths after 2nd $\frac{1}{5}$th after 3rd crop after application.
Artificial manure with bone phosphate	Permanent pasture	Half after 1st crop $\frac{1}{2}$ after 2nd crop grown after application.
Ditto ditto	Meadow	Ditto ditto if hay consumed on farm otherwise nil.
Ditto ditto	Corn crop	One-third in last year if crop consumed on farm.
Ditto ditto	Green crop except potatoes	One-fourth in last year if crop consumed on buildings. One-third ditto ditto on land.
Ditto with mineral phosphate	Similar crops	Half the above rates for artificial manure with bone phosphates.
Purchased feeding stuffs	Consumed by cattle	Sheep or pigs as under viz.:—
Cotton cake decorticated	To fattening stock	Half where no crop taken from manure $\frac{1}{7}$th after one crop so taken.
Ditto ditto	To cows and young stock	Two-thirds of those rates.
Linseed cake	Ditto	One-third where no crop taken from manure $\frac{1}{7}$th where one such crop (also $\frac{1}{10}$th where two such crops taken when cake given to fatten cattle).
Compound cakes Waterloo Bibby &c.	Ditto	One-fourth where no crop taken from manure $\frac{1}{7}$th where one such crop taken.
Bran peas and beans	Ditto	Ditto ditto ditto.
Other purchased corn or meal	Ditto	One-sixth where no crop taken from manure $\frac{1}{7}$th where one such crop taken.

NOTE I.—Carting done by the Lessee for new buildings drainage or other permanent improvement created made or executed by the Reversioner or Reversioners if such carting be done within five years of the determination of the tenancy will be allowed for but in assessing such compensation (where the Lessee has paid no interest or additional rent in consequence of such improvement) deduction will be made from the cost of such carting of a sum to be fixed by the Lessor or his Agent in his absolute discretion in respect of the benefit the Lessee has derived from such improvement.

NOTE II.—In calculating the compensation for purchased feeding stuffs twenty per cent. will be deducted where milk is sold off the farm and twenty per cent. will be added where feeding stuff is consumed only by fattening cattle except where a different rate is already named.

NOTE III.—No compensation will be allowed for nitrate of soda ammoniacal water from gasworks gas lime sulphate of ammonia or other forcing manure nor will any compensation be made for any of the improvements mentioned in this Schedule where any such improvements have been followed by the application of any such forcing manures.

NOTE IV.—There shall be deducted from the amount of compensation payable to the Lessee his executors administrators or licensed assigns—

(*a*) Any sums due to the Reversioner or Reversioners in respect of rent under this Lease or by virtue of the covenant by the Lessee with respect to hay straw grass or root crops sold off the premises with consent also any rates duties taxes charges assessments impositions or outgoings to which the Lessee his executors administrators or assigns are liable as between him or them on the one hand and the Reversioner or Reversioners on the other hand. Appendix A. I.

(*b*) Such sums as may be agreed upon or in default of agreement shall be awarded upon a reference under the provision for a reference contained in this lease in respect of any of the following matters viz.:—

(1) In respect of any benefit which the Reversioner or Reversioners shall have given or allowed to the Lessee his executors administrators or assigns in consideration of the Lessee his executors administrators or assigns executing any improvement in respect whereof he or they shall claim compensation.

(2) In respect of the value of the manure that would have been produced by the consumption on the premises of any hay straw roots or green crops sold off or removed from the premises at any time during the tenancy without the consent of the Reversioner or Reversioners except so far as a proper return of manure to the premises has been made in respect of such produce so sold off or removed therefrom.

(3) In respect of any waste committed or permitted by the Lessee his executors administrators or assigns at any time during the tenancy.

(4) In respect of any breach of any of the Covenants by the Lessee contained in this Lease.

The SECOND SCHEDULE above referred to.

No. on Estate Plan.	NAMES OF FIELDS, &c.	Cultivation.	Acreage.

Signed sealed and delivered by the above-named in the presence of

APPENDIX II.

Appendix A. II.

Handed in by Mr. C. Sewell Read (see after Question 16,677).

The last heading of the evidence I prepared for the chairman was "Some minor grievances of recent legislation," upon which I was not questioned, and I therefore respectfully submit the following to the Commission:—

Every farmer and market gardener who employs anyone to carry a gun to scare the birds which prey upon his crops has to pay a 10*s.* license. A large farmer probably takes out a game certificate, and so escapes the tax, and a farmer can use a gun himself to "scare birds and kill vermin," but it has been held by some Excise officers that if he kills a rook (or, I suppose, frightens a rat without killing it.) he is liable. However this may be, it is certain that when a crow boy uses a pistol to scare birds his employer must take out a gun license. The Act was passed when Mr. Lowe was Chancellor of the Exchequer for preventing the too common use of *revolvers*. It has entirely failed to do this, and although the Act may be very useful in limiting the number of idle loafers from carrying guns, it

Appendix A. II.

has inflicted a fine on every husbandman who employs anyone to protect his crops with fire-arms. I carried an amendment in committee on the Bill to exempt all guns used for protecting farm and garden produce from the ravages of birds and vermin, but upon report the exemption was confined to the occupier himself. In the debate Mr. James Howard said, "Government "might as well tax a plough, for a gun was as neces- "sary to protect growing crops as a plough was to "prepare the land for them."

Another small agricultural grievance is the law which prohibits the killing of *sparrows* by *poison*. These most destructive birds have so increased and multiplied that in many parts of East Anglia they consume acres of grain around the villages, and frequently destroy half the corn grown upon the cottage allotments. It is impossible to keep sparrows down by shooting or netting, and the law has of late been disregarded, and no one thinks of prosecuting the offenders. It is necessary to poison sparrows as rats and mice, and as they generally feed during the winter by themselves there is little fear of killing other birds with them.

It is also considered a hardship that a gamekeeper may trap and destroy the farmer's *cats* in any way he pleases, but the farmer must *not set a trap above ground* to catch rabbits under the Ground Game Act, which is almost the only chance he has of catching them when they come out of an adjoining wood and prey upon his crops at night.

(Signed) CLARE SEWELL READ.

Honingham Thorpe, Norwich,
3rd May 1894.

Appendix A. III.

APPENDIX III.

NORFOLK VALUERS REGULATIONS.

Handed in by Mr. W. T. Simpson (*see Question* 16,835).

AGRICULTURAL HOLDINGS ACT, 1883.

The following recommendations for carrying out the above Act were unanimously agreed to by the united discussions of a committee of the Norfolk Valuers, at a meeting of their general body, and a committee of the Norfolk Chamber of Agriculture:—

FIRST SCHEDULE.

PART I.

Improvements to which Consent of Landlord is required.

It was not considered necessary to offer any recommendations upon this part of the Act, as landlord's consent is necessary before compensation can be claimed, and where buildings are erected without consent of landlord they are the tenant's property, and unless he can obtain compensation may be removed by him.

PART II.

Improvements in respect of which Notice to Landlord is required.

Drainage.—This class of improvement, it was considered, would mainly be carried out by landlord, or by an arrangement between landlord and tenant. Where a mutual arrangement is made for landlord to provide tiles, and the tenant pays all labour, carriage, and haulage, compensation should be based upon a *twelve years'* principle; where tenant provides tiles as well as labour, &c., upon a *twenty years'* principle; bush draining and mole ploughing, when done at tenant's cost, upon an *eight years'* principle.

PART III.

Improvements for which the Consent of Landlord is not required.

"No. 16. Boning Land with Undissolved Bones."

To allow bones (not less than ¼ in.) where applied to arable land upon a four years' principle; where applied to pasture land, eight years.

"No. 17. Chalking of Land."
"No. 19. Claying of Land."
"No. 21. Marling of Land."

To allow upon a 12 years' principle: the entire cost to be allowed for the first four years, and after that period one-eighth to be deducted yearly for the remaining eight years. Claying and chalking on fen lands on a six years' principle.

"No. 18. Clay Burning."

To allow one-third of the cost where only one crop has been taken.

"No. 20. Liming of Land."

To allow upon a four years' principle.

"No. 22. Application to Land of Purchased Artificial or other Purchased Manures."

To allow one-third of the cost of the following, namely: rape, mustard and cotton cakes, greaves, malt culms, bone meal, town-made and farmyard manures used for roots or other green crops during the last year.

And where a root crop fails and the land has been properly cultivated, and is left in a clean condition, half the cost of such manures, and also half the value of the farmyard manure used thereon.

"No. 23. Consumption on the Holding by Cattle, Sheep, and Pigs, of Cake, or other Feeding Stuff not produced on the Holding."

To allow one-third of the cost of linseed and cotton cake, linseed and cotton seed meals, beans, and peas, and one-sixth of the cost of all other corn and feeding stuff consumed on the holding during the last year of the tenancy; but in estimating the value of the improvements under this clause, no larger amounts for compensation shall be taken into calculation for allowance of the proportions of one-third and one-sixth respectively than their average expenditure during the last three years of the occupation.

Also, subject to the three years' average expenditure, one-sixth of the cost of linseed and cotton cake, linseed and cotton seed meals, beans, and peas consumed in the preceding year, but in making any allowance under this clause the nature of the soil to be taken into consideration.

Where the unexhausted value of feeding stuff is allowed, the maximum price of farmyard manures made by cattle, sheep, and pigs should not exceed 3*s.* per load.

Folding on the olland for winter corn in the last year shall be subject to a reduction of one-half where the artificial food consumed thereon has already been charged.

In all cases of a compensation claim, under Part 3 of First Schedule, foulness of the land to be taken into consideration as a reduction or set off; such foulness, however (unless excessive, over the whole or greater portion of the holding), shall not be deemed to extend beyond the lands comprised in the root and fallow shift, and the last year's summer corn shift.

Where fences that are usually trimmed have been properly so done in the preceding autumn, and where drains, dykes, ditches, and watercourses have been properly done out during the last year of the tenancy, no claim or set off shall be allowed.

Appendix A. IV

APPENDIX IV.

Handed in by Mr. Albert Pell (*see Questions* 17,711 *and* 18,026).

BOARD OF AGRICULTURE.

FARMERS AND THE INCOME TAX.

The Board of Agriculture have reason to believe, from statements which have recently been made to them, that persons occupying lands, for the purpose of husbandry only, are not fully aware of their statutory and other rights in regard to the assessments made upon them to income tax. The Board desire, therefore, to give publicity to the following memorandum, compiled under the authority of the Board of Inland Revenue, which sets out fully the principles upon which those assessments are originally made, and the various rights of appeal and relief which exist. The Board call special attention to the fact that by the exercise of the option (referred to in paragraph No. 4 of the annexed memorandum) of being dealt with according to the rules of Schedule D. of the Income Tax Acts, occupiers of land for the purpose of husbandry only who have made no profits therefrom on the average of the three years preceding the year of assessment, or whose aggregate income from every source does not amount to 150*l.* a year, need not be assessed to income tax at all, provided, of course, that the returns they make on the form which will be supplied to them by the Surveyor of Taxes are regarded as satisfactory by the Commissioners of Taxes. In such cases no appeal to the Commissioners is requisite, as no assessment is made, and no question arises involving payment and subsequent repayment of the tax.

In the year 1890–91 the assessments under Schedule D. in respect of profits from the occupation of lands, the occupiers of which availed themselves of this option, amounted to 6,826*l.*, whereas the assessments which would have been made under Schedule B. on the yearly rent or value of such lands would have amounted to 55,977*l.* It was only, however, in 116 cases that the option was exercised, and the Board cannot doubt that if the provision of the law in this matter were more widely known it would be very much more freely resorted to.

Even in cases in which assessments are made under Schedule B. the law provides ample means of obtaining relief if at the end of the year the farmer has made no profits, or if his profits have fallen short of the sum assessed, but by reason of the fact that the Commissioners of Taxes require the production of accounts before they issue a certificate for repayment, the process is necessarily more troublesome to the farmer. It is for this reason that the making of a return for assessment under Schedule D. would in many cases be a simpler and more advantageous proceeding.

In any case of difficulty arising under any of the heads mentioned in the memorandum, the Board recommend that application for advice and assistance should be at once made to the local Surveyor of Taxes, or to the Board of Inland Revenue, Somerset House, London, W.C.

HERBERT GARDNER,
President of the Board of Agriculture.

4, Whitehall Place, S.W.,
April 1893.

MEMORANDUM.

Income Tax. Schedules A. and B. On Lands used for the purposes of Husbandry.

1. Income tax is chargeable under Schedule A. in respect of the ownership, and under Schedule B. in respect of the profits derived from the occupation of lands.

2. For income tax purposes the income arising from the occupation of lands for the purposes of husbandry is deemed to be, in England and Wales, *one half* of the full yearly rent or annual value, including tithe rent-charge, if any, and, in Scotland, *one third* of the full yearly rent or annual value.

3. "Annual value" means the rack rent at which lands are worth to be let by the year, that is, the yearly rent which a tenant might reasonably be expected, taking one year with another, to pay for the lands, if the tenant undertook to pay all usual tenant's rates and taxes and if the landlord undertook to bear the cost of repairs and the other expenses necessary to maintain the property in a state to command that rent.

4. Any person occupying lands for the purpose of husbandry only may elect to be assessed under Schedule D. on the average profits of the three preceding years instead of being assessed under Schedule B. on the yearly rent or value. The election of such person to be assessed under Schedule D. must be signified by notice in writing addressed to the Surveyor of Taxes for the district on or before the 5th of June in each year. In Scotland the time within which notice must be given to the Surveyor is extended to 5th August.

5. Meetings of the Commissioners of Taxes are held annually between the 29th September and the 25th of December for the purpose of hearing appeals under Schedules A. and B. and D. In England and Wales intimation of the dates of these meetings is given by notice affixed to church and chapel doors, and any person aggrieved by the assessments made upon him may appeal, on giving 10 days' notice of his intention either to the local assessor or to the district Surveyor of Taxes. In Scotland notice of intention to appeal should be sent to the Surveyor of Taxes for the district within 10 days after receipt of the notice of assessment, and thereafter intimation will be given of the place and date of meeting of the Commissioners.

6. The Commissioners also hold meetings after the expiration of the year of assessment for the purpose of hearing appeals by persons who have paid income tax in the previous year under Schedules B. or D. on amounts in excess of the actual profits made in that year.

7. Persons who desire to appeal with a view to obtain repayment on the ground of loss or diminution of profits must apply to the Surveyor of Taxes within six months from the 5th of April for information as to the time and place of meeting of the Commissioners.

8. Persons who have sustained a loss by farming operations may obtain repayment of the tax paid under Schedules B. or D., and also of a proportionate amount of the tax paid in respect of their incomes (if any) derived from sources other than from the occupation of land.

9. The following printed form of account of profit and loss for the use of farmers has been provided by the Commissioners of Inland Revenue, and may be obtained on application to any Surveyor of Taxes:—

No. 79D. Farmers' Appeals.

Parish of _____

INCOME TAX.

County of _____

No. of Acres—

STATEMENT of PAYMENTS and RECEIPTS in respect of the occupation of LANDS for the purposes of HUSBANDRY for the year ending _____ 18 ____.

Arable.

Pasture.

PAYMENTS:—	£ s. d.	RECEIPTS:—	£ s. d.
Live stock bought		Live Stock and Wool sold	
Corn and Seeds bought for seed		Corn and Seeds sold	
Feeding Stuffs, Oil Cake, and Manure bought		Dairy Produce and Poultry sold	
Rent and Tithes		Other Produce, including Hay, Straw, or Roots where sold	
Rates, Taxes, and Insurance of Farm Stock		Labour, Stock, Implements, &c., hired out	
Labour on the Farm		OTHER RECEIPTS, viz.:—	
Tradesmen's accounts for Goods supplied or work done upon the Farm		Value of Farm Produce used by Household	
Sundries			
	£		£

Form of Declaration to be filled up and signed.

I solemnly and sincerely declare that the amount of live and dead stock and produce upon my holding on* the _____ day of _____ 18 ____, did not differ materially for the purposes of this account from the average amount in hand on the corresponding day of previous years [†except in the particulars stated below, which are true to the best of my knowledge and belief].

* Name the day to which accounts are made up.

† Strike out the words in brackets if the amount is the average one.

Particulars of difference referred to above.

Description of Stock and Produce.	Increase.	Decrease.

Signature _____

Postal Address _____

Date _____ 189____.

Appendix A. IV.

10. The Commissioners of Inland Revenue have instructed their officers not to object to the admission of farming accounts made up annually from Michaelmas Day instead of from Lady Day.

11. Any person whose total income from all sources is proved to be less than 150*l.* a year is exempt from the payment of income tax. Where the total income amounts to 150*l.* but is less than 400*l.* the person is entitled to claim an abatement of duty on 120*l.*

12. *Remission of Rent.* — Where temporary abatements or remissions of rent have been allowed, a reduction or repayment of duty may be claimed in respect of the amount remitted for each complete year ending on the 5th of April. This allowance may be claimed under both Schedules (A. by the landlord, B. by the tenant) on a special form of claim which will be supplied by the Surveyor of Taxes. When the remission has the effect of bringing the total income of the tenant below 150*l.* the whole of the duty paid or payable under Schedule B. will be repaid or allowed to the tenant.

13. Further information on any of the points mentioned in this memorandum may be obtained from the Surveyor of Taxes for the district, who will take steps to afford proper facilities to all persons who desire to appeal with the object of obtaining relief from or the repayment of income tax.

APPENDIX V.

(*Handed in by Mr. Albert Pell. See Question* 17,893.)

UNIVERSITY OF CAMBRIDGE.

Examination for the Diploma in Agricultural Science.

The Syndicate for Examinations in Agricultural Science give notice that for the year 1894 these Examinations will be held in Cambridge, and will begin on Monday, July 2.

Order of Examinations in Agricultural Science.

Part I.

Monday,	July 2.	2.30—5.30.	Chemistry I.
Tuesday,	July 3.	9—12.	Botany I
,,	,,	2—4.	Physiology.
,,	,,	5—6.	Book-keeping.
Wednesday,	July 4.	9—11.	Chemistry II.
,,	,,	11—12.	Entomology.
,,	,,	2—4.	Botany II.
Thursday,	July 5.	9—10.30.	Geology.
,,	,,	10·30—12.	Engineering.
,,	,,	2—5.	Practical Chemistry.
Friday,	July 6.	9—12.	Practical Botany.

Part II.

Saturday,	July 7.	9—12.	Agriculture.
,,	,,	2—4.	,,
,,	,,	5—6.	Surveying.
Monday,	July 8.	Examination on a farm.	

The fee for admission to Part I. is 1*l.* 1*s.*, and for admission to Part II. 2*l.* 2*s.*

The names of Candidates for either Part of the Examination must be sent to the Registrary of the University on or before June 13, 1894; and the fee transmitted at the same time. In no case are fees returnable.

A Candidate who has passed both Parts of the Examination to the satisfaction of the Examiners shall be entitled to a Diploma, testifying to his competent knowledge of the Science and Practice of Agriculture; and a Candidate who has passed Part I. to the satisfaction of the Examiners shall be entitled to a Certificate to that effect.

SCHEDULES.

The Syndicate for Examinations in Agricultural Science have drawn up the following Schedules defining the range and details of the subjects of Examination in Agricultural Science.

The Examinations will be partly in writing, partly oral and practical.

Part I.

This part of the Examination will relate to

I.—*Botany.*

The elements of the Morphology, Histology, and Physiology of Plants, illustrated principally by a study of Flowering Plants.

The constitution of the ash of plants, including the experimental study of the effect of various external conditions on the ash. The study of the mineral constituents of the food of plants by water-culture and cognate methods. The effect on the plant of the various constituents. The assimilation of carbon including the appearance of the assimilated products, and the necessary gas analyses. The detection and estimation of starch, inulin, and cellulose. The assimilation of nitrogen in the form of nitrate, amide, ammonia, and in the free condition. The detection and estimation of proteids and nitrogenous compounds. The nature of the changes occurring in germinating seeds, tubers, and other reserve stores, together with the translocation of food-materials, and the action of ferments. The detection and estimation of glucose, maltose, cane sugar, tannin, glucosides, oils and fats. The function of the root in relation to the soil; the absorption of water and of salts in solution. The detection and estimation of organic acids and organic salts. The phenomena of growth, especially in regard to external conditions.

The elements of the classification of Phanerogams as illustrated by British Agricultural plants. The detailed study of the genera of Agricultural plants belonging to the Natural Orders Gramineæ, Leguminosæ, Cruciferæ, Umbelliferæ, Solanaceæ, Chenopodiaceæ, Rosaceæ, Urticaceæ. The study of the principal weeds and harmful plants, and of the seeds occurring as adulteration, or otherwise, in commercial samples of agricultural seeds.

The general characteristics of the Fungi and the elements of their systematic classification. The characteristics and life-history of the Fungi producing the principal diseases of Agricultural plants, for instance:—"Damping off" of seedlings, White-Rust, Mildews, Potato-disease, Finger and Toe, Smuts, Bunt, Ergot, Rusts. The more common diseases of timber. The remedies in use for the fungoid diseases of plants.

II.—*Chemistry.*

The composition and properties of atmospheric air. Diffusion. Hygrometry, clouds, dew and rain. Thermometry and radiation, frost and ice. Water, solution of solids and gases in water, rain, spring, river and sea-waters, filtration, and softening of waters. Dialysis.

The composition and properties of carbon dioxide and carbonates, oxides of nitrogen, nitrates, ammonia, silica and silicates, phosphates, sulphates, chlorides, potash and soda, lime, magnesia, alumina, and oxides of iron. Oxidizing and reducing agents. Saccharine and amylaceous substances, alcohol, acetic acids, lactic acid, urea, fats and soaps, paraffin oils, turpentine, and phenol. Antiseptics and disinfectants. Nitrification.

Chemical and physical properties of various soils, and the effects on soils of ploughing, subsoiling, draining, burning, and irrigation. Use of lime and marl.

The general chemical composition, and use, of manures of different kinds, including sewage, soot, ashes, and other town refuse. The chemical composition of bones, apatite, and other phosphates. Determination of the value of different samples.

The composition and properties of milk, butter, and cheese.

Qualitative analysis of substances which may contain ammonia, sodium, potassium, calcium, magnesium, barium, zinc, manganese, iron, aluminium, copper, antimony, arsenic, mercury, lead, sulphur, sulphites, sulphates, chlorides, nitrites, nitrates, phosphates, carbonates, oxalates, acetates.

Simple volumetric and gravimetric analysis of acids and alkalies, lime, oxides of iron, silica, phosphates, carbonates. Hardness of water. Analysis of milk and butter.

III.—*Physiology and Hygiene.*

General build of the animal body as it may be seen, for instance, by the dissection of a rabbit. General relations and structural features of the constituent tissues and organs.

Special and characteristic anatomical features of domestic animals; alimentary canal of horse, ox, sheep, pig, and fowl.

The more important elementary facts and principles relating to—

Circulation: nature and properties of blood; mechanics of circulation; influence of the nervous system on the vascular mechanism. Respiration: mechanics of respiration; chemistry of respiratory interchange; ventilation; influence of the nervous system on the respiratory mechanism. Nervous system: general arrangement and mode of action of the nervous system; reflex actions.

Nature, general characters, composition and reactions of the several food-stuffs: proteids, fats, carbo-hydrates including cellulose; salts; water. Composition of foods used in farming.

Special digestive processes in domestic animals: nature and uses of saliva, gastric juice, bile and pancreatic juice; digestion by means of microbes.

The changes which foods actually undergo in the alimentary canal: rumination; function of the caecum in herbivora; digestion of cellulose. Relative digestibility of various foods. Absorption from the alimentary canal: distribution of absorbed products over the body; effects and final fate of the absorbed and distributed products.

Excretion of waste: the excretory organs; nature and composition of the several excretions.

Effect of food on the body: income and output of material: income and output of energy as heat and work. Regulation of body temperature.

Special influence of the several food-stuffs on the composition of the body. The physiology of fattening: comparative nutritive and fattening value of proteids, fats, and carbo-hydrates including cellulose; exemplification of the principles with reference to the foods in general use for feeding and fattening purposes, such as corn, beans, hay, straw, brewers' grains, malt, oil cake.

The nature and properties of milk: the secretion of milk; the changes taking place in milk after secretion; the effect on milk of feeding and other influences.

IV.—*Entomology.*

The structure of a typical insect.

The characteristics of the principal orders of insects; and those which distinguish the *larvae* of coleopterous, hymenopterous, lepidopterous, and dipterous insect pests.

The life history of the commoner insect and acarine pests, especially those which attack crops, or are injurious to farm animals. The principal indications of attack and the general appearance of infested crops; the principal measures of prevention and remedy.

V.—*Geology.*

The fundamental principles of geology, including the elements of stratigraphy and lithology. The classification of rocks according to their origin, stratification, texture, and organic remains. The recognition of the commoner rock forming minerals.

The application of geology to the work of a farm: the composition, origin, and treatment of soils; effects of different kinds of subsoils; water supply, drainage, and irrigation; minerals of agricultural value; materials used in building, road making, &c.; quarrying, cuttings and embankments, in stratified, unstratified, jointed, or cleaved rock.

The use of geological plans and sections, and identification of minerals and rocks.

VI.—*Mechanics and Engineering.*

Mechanics. Mass, velocity, acceleration, weight, density, momentum, energy, work, laws of motion, centre of mass. Friction. Mechanical powers; shafting and gearing. Strength of materials. Trusses. Equilibrium of liquids. Flow of water in pipes and channels. Pumps. Power derived from water-falls; water-wheels and turbines. Wind and windmills.

Heat. Sources of heat. Specific heat, heat of fusion and of evaporation, vapour pressure. Quantity of heat generated in combustion. Mechanical equivalent of heat. Second law of thermo-dynamics. Principles of steam, gas, and petroleum engines. Boilers. Construction of valves. Expansion working. Fly-wheels. Consumption of fuel and water per horse-power.

VII.—*Book-keeping.*

The principles and methods of book-keeping.

Principles of double entry: memorandum or waste book, day book, ledger, cash book.

Balancing accounts: profit and loss and preparation of the balance sheets.

Discount and interest; Consignments; bills of exchange.

Part II.

This part of the examination will relate to—

VIII.—*Agriculture.*

Composition of soils (mineral and organic matter, chemical ingredients, &c.). Physical properties of soils. Classification of soils (loams, marls, calcareous soils, &c.). Improvement of soils (physical and chemical). Tillage and implements. Manuring. Rotation of crops; modifications of the ordinary rotation to suit special circumstances. Cultivation of crops (sowing, cleaning, harvesting, &c.). Formation and treatment of pasture. Ensilage. Live stock (breeds, rearing, feeding, &c.). The dairy. Hygiene of the farmyard and dairy. Farm management, including outlay at commencement.

The questions will be of a practical nature and the examination will be in part conducted on a farm.

IX.—*Surveying.*

Rules and scales for linear and circular measure. Verniers, measuring rods and chains. Levels. Use of logarithms and slide rule. Use of theodolite.

Ordinary rules of superficial and solid mensuration applied to examples. Estimation of volume of a cylinder. Estimation of the weight of a mass from its dimensions and specific gravity.

Ordinary land surveying by chain; levelling; plotting and determination of area; working out examples.

Surveying with theodolite. Trigonometric solution of triangles.

Francis Darwin,
Secretary to the Syndicate for Examinations in Agricultural Science.

10 February 1894.

* Corner.

† In 1888 this is the quotation for Brown West Indian. I have been unable to find a quotation for "Manilla Muscavado" in the usual price lists; but the price of Brown West Indian in 1885 was nearly the same as that here given for Manilla Muscavado.

‡ Brown West Indian.

§ This is Ceylon Plan. Mid., as I do not find the old quality quoted in the lists before me. The price taken in 1885 was rather higher than Ceylon Plan. Mid. at that time, but the difference was not material, and I have taken the top price instead of the mean price.

‖ Ceylon Plan. Mid., top price.

TABLE II. (*See Questions* 18,097, 18,574.)

COMPARISON of the INDEX NUMBERS of the "ECONOMIST," Mr. SAUERBECK, BOARD of TRADE IMPORT and EXPORT PRICES, Dr. SOETBEER, and an AMERICAN INDEX NUMBER.

	Average years 1868–77.	Average Years 1878–87.	Decrease in Second Period.		Average Years 1888–93.
			Amount.	Per Cent.	
I. "Economist"	2,750	2,300	450	16½	2,170
II. Sauerbeck	100	79	21	21	71
III. Soetbeer*	129	120	9	8	—
IV. American†	113	93	20	18	—
V. Board of Trade import and export prices — exports‡	85·7	59·9	25·8	30	—
V. Board of Trade import and export prices — imports‡	85·6	71·7	13·9	16	—
I. Silver (Sauerbeck)	100	82	18	18	71·7

* 1866-75 and 1876-85.

† 1866-70 and 1876-80. The American figures are not later than 1880. *See* Appendix III., Appendix to First Report of Royal Commission on Trade Depression.

‡ Figures of 1873 and 1883. These figures not being calculated for every year, it is not possible to give an average of a ten-yearly period, but the results would be much the same comparing any other years at ten years' interval.

TABLE III. (*See Question* 18,098.)

AVERAGE IMPORTS per HEAD and TOTAL IMPORTS and EXPORTS per HEAD of the POPULATION of the UNITED KINGDOM in the under-mentioned QUINQUENNIAL PERIODS; with the ENTRIES of SHIPPING per HEAD in the same periods; also showing PERCENTAGE INCREASE or DECREASE.

[Extracted from "First Report of Trade Depression Commission," page 127, &c., and continued.]

Appendix A. VI.

TABLE XIII. (*See Questions* 18,163, 18,250.)

SUMMARY of "RETURN of ASSESSMENTS of LAND in ENGLAND and WALES under INCOME TAX ACTS in 1842–43 "and 1888–89 compared; with AMOUNT of TITHE as commuted and AMOUNT according to AVERAGE PRICES of "1883–89, in parishes or groups of parishes" obtained for the use of the BOARD of TRADE in 1890.

Counties.	Annual Value of Lands assessed, including Rent-charges under Tithes Commutation Act, &c., and of Tithes raised by Rates and other Tithes not arising from Lands. (Not including Easter Offerings, Surplice Fees, Dues, and Money Payments in right of the Church.)		Approximate Annual Value of Assessments given up by Schedule in 1888-89, in respect of Allowance for Temporary Abatement of Rent, or in respect of Farms usually let, but which have been thrown on Owner's Hands.	Tithe.		Annual Value of Houses assessed.	
				Amount of Tithe as commuted under the Tithes Commutation Act.	Amount of Tithe payable according to Gazette average Prices for 1883-89.		
	1842-43.	1888-89.				1842-43.	1888-89.

NOTE.—The figures in the column headed "Amount of Tithe as commuted under the Tithes Commutation Act," have been taken from the Parliamentary Return, No. 214, of session 1887. The totals shown by that return, including corn rents converted into tithe rentcharge, amount to 4,059,126*l.* as against the above total of 4,058,692*l.* a difference of 434*l.* It would be impossible to trace this small difference without very great labour, on account of it having been necessary to transfer border parishes or portions thereof from county to county in order to make the return agree with the grouping in the Inland Revenue Returns, and in addition a large portion of the difference may probably be accounted for by the way in which fractions of a pound have been dealt with.

The figures relating to the year 1842–43 are taken from the Parliamentary Return, No. 43 of session 1846, with which however the totals are not in precise agreement owing partly to the treatment of fractions of a pound and partly to errors in the original Return itself.

APPENDIX VIII.

Appendix A. VIII.

(*Handed in by Mr. W. Lipscomb. See Question* 20,466.)

CENTRAL CHAMBER OF AGRICULTURE.

AGRICULTURAL HOLDINGS ACT COMMITTEE, 1894.

1. The Council of the Central and Associated Chambers of Agriculture, at their meeting held on February 4th, 1894, resolved—

> That in the opinion of this Council the time has come when the Agricultural Holdings Act requires amendment, and that a committee of not more than fifteen members be appointed to consider the various suggestions made by the Associated Chambers and Clubs, and to report what amendments in the Act are desirable.

The Committee was accordingly appointed as follows:—Mr. Channing, M.P. (Chairman of the Central Chamber), Mr. Jeffreys, M.P. (Vice-Chairman of the Central Chamber), The Right Hon. H. Chaplin, M.P., Mr C. S. Read, Mr. Lipscomb, Mr. Bowen-Jones, Mr. W. Biddell, Mr. Rowlandson, Mr. Carrington Smith, Mr. Treadwell, Mr. St. John Ackers, Mr. Kay, Mr. Latham, Mr. F. E. Muntz, and Mr. Kidner.

2. The Committee beg to report that at their first meeting on March 6th they elected Mr. Lipscomb as Chairman. They have held altogether five meetings. They have carefully considered all the suggestions sent up by Associated Chambers and Clubs (including some which have reached them since their appointment), and present an analysis of the same as an appendix to this Report. They have also gone carefully through the Agricultural Holdings Act, 1883, and considered what amendments are desirable (whether suggestions respecting them had been sent up or not).

3. The Committee, before proceeding to state the results of their deliberations, think it desirable to draw attention to the action which has been previously taken by the Central and Associated Chambers in regard to the question of tenant right.

PREVIOUS ACTION BY THE CHAMBERS.

4. In 1870 the Council declared that the application of capital to Agriculture was discouraged, among other causes, by "the uncertainty of tenure and absence of compensation for unexhausted improvements, and by unnecessary restrictions on cropping."

In 1872 a large number of resolutions were sent up by Associated Chambers, and the Central Council, after prolonged discussion at two meetings, resolved—

> (1) That this Council considers it necessary for the proper security of capital engaged in husbandry that, when such security is not given by a

Appendix A. VIII.

lease or agreement, the outgoing tenant should be entitled by law to compensation for the unexhausted value of his improvements, while, at the same time, the landlord should be paid for dilapidations and deterioration caused by default of the tenant, provided that such compensation is subject to previous consent of the owner in the case of buildings, drainage, reclamation, and other works of a permanent character.

(2) That this Council considers absolutely necessary a change in the law of tenancy so that in all yearly holdings, the letting and hiring of agricultural land, as well on entailed and ecclesiastical as on other estates, shall be subject to at least twelve months' notice to quit, cases of insolvency excepted.

5. In March, 1873, a Committee comprising Sir Michael Hicks-Beach (then Chairman of the Chamber), Mr. G. F. Muntz (then Vice-Chairman of the Chamber), Mr. E. Heneage, Mr. Clare Sewell Read, Mr. W. C. Little, Mr. W. Lipscomb, Mr. Russon, Mr. R. H. Masfen, and Mr. R. Fowler, was appointed to collect and prepare information on compensution for unexhausted improvements. Schedules of inquiry were distributed in all districts of England and Wales, many of the local Chambers making also independent inquiries, and sending up their reports and recommendations.

6. In the meantime, during the session of 1873, a Landlord and Tenant Bill—the earliest measure dealing with the subject which was laid before Parliament—was introduced by Mr. James Howard and Mr. Clare Sewell Read. This was discussed in April, and the following resolution passed :—

> That this Council, without pledging itself to the details of the Landlord and Tenant Bill, approves of its principle of compensation to tenants for the unexhahsted value of their improvements, and to landlords for dilapidation or deterioration caused by default of tenants ; and desires that security for this purpose, when not given by lease or agreement, should be provided by legislation, subject only to the written consent of the landlord in the case of permanent improvements.

A similar resolution was subsequently passed at a special general meeting of the Central Chamber. Objection was taken to the proposal to prevent the power to contract out, but the Chamber decided in favour of a measure which should *not be permissive*, but effectually made binding wherever security was not given by custom, lease, or agreement. The Bill was withdrawn owing to the sudden illness of Mr. Howard on the day when it would have come forward.

7. In 1874 the subject was again considered, and previous resolutions re-affirmed. A report was presented by the Committee showing the customs existing in most of the counties in England, and in June the Council authorised the Parliamentary Committee to draft a Bill.

8. In February, 1875, the final report of the Committee on Agricultural Customs was presented. It stated that

> Looking at the results of the inquiry so far as it has at present proceeded, revealing a very partial prevalence of equitable tenant right customs, very conflicting practices as between one county and another, and even between different parts of the same county, and over a very large number of counties and districts the absence of any compensation whatever for unexhausted capital invested by the occupier (and this a quarter of a century after the labours of Mr. Pusey's Committee and the attempted legislation of 1848), your Committee cannot but conclude that the time has arrived for a settlement of the agricultural customs of the kingdom upon an equitable basis.

The draft of an Agricultural Tenancies Bill was brought forward and discussed very fully at two meetings in February and March. As then settled it was forwarded to the Prime Minister and the Lord President of the Council, and in May the Government introduced their Agricultural Holdings Bill. The Council cordially concurred in the main principle of this measure, but regarded with great doubt the principle of mainly testing the amount of compensation by the increase or diminution of letting value of the holding.

Attempts were made on behalf on the Chamber to modify the unconditionally permissive character of the Bill, but the amendments brought forward with this object were defeated. The principle laid down by the Council, and consistently adhered to, was "compensation certain—if not by agreement, then by law. The measure, however, was passed without the demands of the Chambers being met.

The Act of 1873.

9. It may be of interest to recapitulate the main provisions of the Agricultural Holdings Act of 1875, as it was repealed by the Act of 1883, and is now not easily accessible. It came into operation on February 14th, 1876, and every new tenancy created after that date was subject to its provisions, *unless an agreement that it should not apply was made in writing between landlord and tenant.* It applied to all tenancies from year to year or at will existing at the time of its commencement, *unless either landlord or tenant give notice within two months that the existing contract of tenancy should be unaffected.* Twelve months' notice to quit was substituted for six months, in accordance with the suggestion in the draft Bill of the Chrmbers.

The three groups of improvements (corresponding to the permanent, durable, and temporary improvements set forth in the Bill of the Chambers) were described as first-class, second-class, and third-class improvements respectively the maximum limit of exhaustion being taken as twenty years for the first-class, seven years for the second-class, and two years for the third-class.

Thirteen improvements were specified in the first-class, namely, drainage, erection or enlargement of buildings laying down permanent pasture, the making of osier beds, water meadows, irrigation works, gardens, or fences, the making or improving of roads and bridges, of watercourses, ponds, wells, or reservoirs, or of works for the supply of water for agricultural or domestic purposes, as well as the planting of hops and orchards, and the reclaiming or warping of land. For these works the previous written consent of the owner was indispensable. It was provided by the 7th section of the Act that the tenant's compensation was to be "the sum laid out by the tenant on the improvement, with a deduction of a proportionate part thereof for each year while the tenancy endures after the year of tenancy in which the outlay is made and while the improvement continues unexhausted.

Second-class improvements were boning with undissolved bones, chalking, clay-burning, or the claying, liming, or marling of land. The period fixed for endurance was seven years, and notice was required to be given in each case to the landlord not more than 42 or less than 7 days before commencing.

Purely temporary improvements of the third-class consisted of applications of purchased manures, and the consumption by cattle, sheep, or pigs on the holding of cake and other feeding stuff not grown on the farm, No compensation was due if a corn, potato, hay seed, or other exhausting crop has been taken from the improved portion of the holding, nor was any recoverable under the Act in cases where the tenant was, by custom or by agreement, allowed payment by the landlord or the incoming tenant for additional value produced by the consumption of feeding stuff in the manure left on the holding. The outlay must have been properly incurred, and the sum finally awarded was to represent the value of the improvement to an incoming tenant. Neither was claim allowed by this statute whereby the tenant could be credited with a larger outlay in the last year of his tenancy than the average of the three preceding years, and an equivalent in manure was to be returned for all hay, straw, roots, or green crops sold off the holding before a claim for compensation was made.

The landlord could counter-claim for waste or breach of covenant committed within four years of the close of the tenancy.

The procedure was by arbitration, unless the parties themselves agreed. One referee might be jointly appointed, or landlord and tenant each might appoint one, such referees appointing an umpire. If they failed to do this the appointment might be made by the County Court judge, or either the Inclosure Commissioners or the County Court judge might be invited by either party to name the umpire without leaving it to the referees. The award was to set forth, "as far as "reasonably may be," the details by which the compensation awarded was arrived at. On paying compensation the landlord might obtain, on the order of the

County Court, a charge on the holding, but no instalment or interest was to be made payable in the case of a landlord who was not an absolute owner for his own benefit after the time when improvement paid for was assumed to be exhausted.

The Act of 1883.

10. It was long before proposals were brought in for amending this Act. A general meeting of owners and occupiers of land was convened under the auspices of the Central Chamber and of the Farmers' Club, on the 2nd July, 1879, to consider remedies for the depression in Agriculture. This was very largely attended, and the permissive character of the Agricultural Holdings Act was generally condemned. A Royal Commission was unanimously demanded to enquire into the causes of depression. This demand was at once acceded to by the Government, and in August the Commissioners were appointed for the purpose.

In their Report, issued in 1882, the Commissioners "recommend that the principle of the Agricultural "Holdings Act relating to compensation should be "made compulsory in all cases where such compensa-"tion is not otherwise provided for."

11. In 1881 Mr. Chaplin and Sir Thomas Acland introduced their Bills, and the Council again approved the principle of both, expressing, however, a preference for the former, as it established the principle originally laid down by the Council in the draft Bill suggested by them before the introduction of the Agricultural Holdings Act, that every tenant on quitting his holding should be compensated by law, by custom, or agreement.

Two Bills were also introduced in the same Session dealing with the law of Distress, and the Council approved the principle of exempting agisted stock and hired machinery, and also the limitation of the power to distrain to a period of two years.

12. In 1882 the Council re-affirmed their resolutions of the previous year. Two Select Committees of the House of Commons were appointed to consider the Bills introduced to amend the laws relating to Agricultural Holdings and to Distress.

13. Early in 1883 the Council again pressed their demand for legislation, and the Government late in the Session introduced their Bill. Two meetings were held by the Council to consider it, and it was approved generally with some criticism of details. The Select Committee on the Law of Distress having reported in favour of the limitation of the power to distrain to one year, the Council approved the inclusion of this recommendation in the Agricultural Holdings Act. The Act was passed on 25th August of this year.

14. It was at once felt by practical men that although "the Value of the Improvement to an Incoming Tenant" was theoretically sound, as a measure of compensation it left wide scope for dispute, which would tend to increase the costs of arbitration, with nothing more definite as a guide. On December 12th, 1883, the Council debated as to the expediency of adopting a basis of valuation, such as was proposed by the Lincolnshire and West Riding Chambers.

As a result a Committee was appointed to draw up a standard of compensation under the Act. It consisted of Mr. Lipscomb (Chairman), the Right Hon. H. Chaplin, M.P., the Earl of Suffolk and Berkshire, the Hon. M. Finch-Hatton, M.P., Mr. Heneage, M.P., Mr. W. Biddell, M.P., Mr. Bowen-Jones, Mr. C. S. Read, Mr. Bell, Mr. Willson, Mr. Jabez Turner, Mr. W. T. Scarth, and Mr. Duckham.

The Report of this Committee was presented in June 1884, and contained a proposed scale of allowances for the unexhausted nominal value of feeding stuffs, with a schedule giving the suggestions sent up by Associated Chambers from various districts. In December following the Report was adopted unanimously.

15. In March 1889, and again in May 1890, the question of the position of a tenant on land subject to mortgage was considered, and on the latter occasion the following resolution was carried:—

> That where compensation for improvement is due to the occupier under the Agricultural Holdings Act of 1883, such compensation shall, with the exception of any sum arising from the payment of tithes, be a first charge on holdings, any contract with the mortgagee under the provisions of the Conveyancing Act of 1881, or of the Settled Land Act of 1882, notwithstanding; and that it is expedient to introduce a Bill into Parliament to amend the existing law in such cases.

A Bill was immediately afterwards introduced by Col. Cotton-Jodrell to give effect to this resolution, and passed into law.

16. In May 1890, the Council resolved—

> That home-grown corn, being now so very much consumed, should, under proper safeguards, be included in the third part of the Schedule under which compensation is to be given.
>
> That te counter-claims of landlords under the Agricultural Holdings Act should be scheduled.

17. In November of the same year the Council resolved—

> That in the opinion of this Council it is desirable to amend the Agricultural Holdings Act by establishing the relation of landlord and tenant, for the purpose of compensation under the Act, as between a tenant for life occupying his own land and the remainderman.

RECOMMENDATIONS.

18. The Committee have to a considerable extent formulated their recommendations as specific amendments to the present Agricultural Holdings Act, but they have not thought it within their reference to attempt to draft a new Bill, or to completely set out all the amendments which may be consequential on their recommendations. They now proceed to state the alterations in the Act which they recommend to the Council.

19. *Basis of Compensation.*—The Committee recommend that the words—

> "Provided always that in estimating the value of any improvement in the First Schedule hereto, there shall not be taken into account as part of the improvement made by the tenant what is justly due to the inherent capabilities of the soil,"

be struck out of Section I.

20. *Compensation to tenant for unexhausted improvements.*—The Committee recommend that the First Schedule should be amended so as to stand as follows:—

Part I.

Improvements to which Consent of Landlord is required.

(1.) Erection or enlargement of buildings.
(2.) Formation of silos.
(3.) Making and planting of osier beds (exceeding one acre).
(4.) Making of water meadows or works of irrigation.
(5.) Making of gardens (exceeding one acre).
(6.) Planting of orchards or fruit bushes (exceeding one acre).
(7.) Making of roads or bridges.
(8.) Making of watercourses, ponds, wells, or reservoirs, or of works for the application of water power, or for supply of water for Agricultural or domestic purposes.
(9.) Making of fences.
(10.) Removal of fences.
(11.) Planting of hops.
(12.) Reclaiming of uninclosed waste land.
(13.) Warping of land.
(14.) Embankment and sluices against floods.

Part II.

Improvements in Respect of which Notice to Landlord is required.

(15.) Drainage.
(16.) Improving of roads.
(17.) Improving of watercourses, wells, or reservoirs, or of works for the application of water power, or for supply of water for agricultural or domestic purposes.
(18.) Laying down of permanent pasture.
(19.) Making of gardens (not exceeding one acre).
(20.) Planting of orchards or fruit bushes (not exceeding one acre).
(21.) Making and planting of osier beds (not exceeding one acre).
(22.) Reclaiming of enclosed waste land.

Appendix A. VIII.

Part III.

Improvements to which Consent of or Notice to Landlord is not required.

(23.) Boning of land with undissolved bones.
(24.) Chalking of land.
(25.) Clay burning.
(26.) Claying of land.
(27.) Liming of land.
(28.) Marling of land.
(29.) Application to land of purchased artificial or other purchased manure.
(30.) Consumption on the holding by horses exclusively engaged or kept on the holding, cattle, sheep, or pigs, of cake, or other feeding stuff not produced on the holding.
(31.) Consumption on the holding by horses exclusively engaged or kept on the holding, cattle, sheep, or pigs, of corn produced on the holding, provided that satisfactory evidence be adduced of the same.
(32.) Two years' and older seeds, if a good plant, and the land clean and in good heart.
(33.) Increased fertility of the holding, due to continuous good farming.
(34.) Any other improvement increasing the value of the holding as an agricultural holding, and not specifically mentioned in this schedule, for which the tenant is not otherwise compensated.

19. *Record of Condition of Holding.*—The Committee recommend that the Act be amended so as to provide:—

(1.) That on the face of every award in the case of a quitting tenant, there shall be a record in a scheduled form of the general condition of the holding.
(2.) That in case of no award a record shall be made either by the landlord and entering tenant themselves, or by a valuer or valuers; and that such record shall be in duplicate or accessible to both landlord and tenant, and signed by all parties making the record.

20. *Compensation to Landlord for Dilapidations.*—The Committee recommend that the dilapidations for which a landlord may claim be scheduled, and that the following be inserted as the Second Schedule to the Act:—

(1.) Unduly mowing grass lands.
(2.) Over-cropping.
(3.) Land neglected or rendered foul by default of the tenant.
(4.) Breaking up old grass land without written consent of landlord.
(5.) Neglect of gates and fences.
(6.) Neglect of roads.
(7.) Neglect of drains, outfalls, and watercourses, for which the tenant is liable.
(8.) Damage to plantations, coppices, and timber included in the holding.
(9.) Neglect of ordinary repairs of buildings, for which the tenant is liable by custom or agreement.
(10.) Loss of manure by hay, straw, roots, or green crops, removed off the farm without written consent of the landlord, or without previous security having been given that equivalent manurial value has been or will be forthwith brought on the holding, and, of required, vouchers for the same produced at the next rent audit, provided that no removal of hay, straw, roots, or green crops, being the last year's produce, shall take place, except with the written consent of the landlord.
(11.) Other dilapidations and deteriorations or decreased fertility of the holding, caused by act or neglect of the tenant which detract from the letting value of the holding.

The Committee further recommend that the period in respect of which a landlord may claim for waste or breach (Section 6) be reduced from four years to two years.

21. *Notice of Claims.*—The Committee recommend that the tenant and landlord shall have an equal right to claim for improvements or dilapidations respectively, and that Section 7 be amended accordingly so as to read as follows:—

A tenant claiming compensation under this Act shall, twenty-eight days at least before the determination of the tenancy, give notice in writing to the landlord of his intention to make such claim.

A landlord shall, twenty-eight days at least before the determination of the tenancy, give notice in writing to the tenant of his intention to make a claim in respect of any waste or any breach of covenant or other agreement, provided that the landlord shall have power, within fourteen days after the determination of the tenancy, to amend his claim in respect to dilapidations to buildings occurring after the notice of claim has been delivered.

Every such claim shall state, as far as reasonably may be, the particulars and amount of intended claim.

22. *Appointment of Valuers and Umpires, and Procedure.*—The Committee recommend:—

That the word "valuer" be substituted for "referee" throughout the Act.

That either the landlord or tenant may act as his own valuer.

That the county council for every county (other than the metropolis) shall from time to time appoint such number of fit persons as they shall think fit to be umpires, and shall forward the names of such persons to the Board of Agriculture, who shall appoint all umpires to be appointed by them under the Act from such list.

That all umpires appointed under the Act shall be selected from a list of valuers nominated by county councils, and sanctioned by the Board of Agriculture.

That in the event of valuers not appointing an umpire before they enter upon the reference (as provided by Section 9, ss. 7) they shall not be entitled to their charges.

That the authority to appoint an umpire in the event of the valuers failing to do so shall be the Board of Agriculture (Section 9, ss. 9).

That the costs of and attending a reference (Section 20) shall be subject to review by the Board of Agriculture, who shall also draw up, and from time to time revise, a scale of maximum fees for umpires.

That on questions of fact and value there shall be no appeal from the award of the umpire, but that on any question of law there may be, at the request of either party, an appeal to the judge of the county court, whose decision shall be final.

That the day fixed by the award for the payment of money awarded shall be "not later than two months" (instead of "not sooner than one month") after the delivery of the award.

That if any umpire shall be proved to the satisfaction of the Board of Agriculture to be incompetent or guilty of any misconduct in the execution of his duty as an umpire, he shall be liable to have his appointment summarily cancelled by the said Board.

23. *Service of Notice.*—The Committee recommend that Section 28 be amended so that a notice sent by post shall be deemed to have been served at the time when the letter containing it was registered.

24. *Fixtures.*—The Committee recommend that the right of the tenant to remove fixtures shall be limited to ten days (instead of "a reasonable time," Section 34) after the termination of the tenancy; and further, that a tenant who shall have acquired by purchase any fixture, under Section 34, shall be in the same position as though he himself had affixed or erected the same.

25. *Damage by Works on Land Resumed.*—The Committee recommend that a tenant shall be entitled to fair and reasonable compensation for any damage which he may suffer by the construction or carrying out of any of the works mentioned in Section 41.

26. *Distress.*—The Committee recommend that the right of a landlord to distrain for rent be limited absolutely to rent for twelve months before the making of such distress; and that the period within which (under the Law of Distress Amendment Act, 1888) a tenant may replevy goods and chattels distrained be extended to twenty-one days.

27. *Loans to Landlords for Carrying out Improvements.*—The Committee recommend that the Board of Agriculture be empowered to grant loans to landowners for carrying out improvements on their estates.

Signed on behalf of the Committee,

WM. LIDSCOMB,
Chairman.

April 30th, 1894.

CENTRAL AND ASSOCIATED CHAMBERS OF AGRICULTURE.

AGRICULTURAL HOLDINGS ACT COMMITTEE, 1894.

ANALYSIS OF SUGGESTIONS RECEIVED FROM ASSOCIATED CHAMBERS AND CLUBS.

No.	Name of Chamber.	Compensation for Improvement. Section 1.	Improvements executed after Commencement of Act. Sections 3–5.	Regulations as to Compensation. Section 6.	Procedure.			Change of Tenant's Compensation and Notice to quit. Sections 29–33.	Fixtures. Section 34.	Crown, Duchy, Ecclesiastical, and Charity Lands and Resumption for Improvements, &c. Sections 41–43.	Distress. Sections 44–52.	General Provisions, Definitions, &c. Sections 53–64.	First Schedule.	Additional Suggestions and Opinions.	Notes.
					Notice of Claim. Section 7.	Reference. Sections 8–14.	Award. Sections 15–28.								
1	BERKS AND OXON CHAMBER.	Omit proviso as to inherent capabilities of soil.	Omit Section 3 (consent of landlord to improvements in Part I. of Schedule I.) Part II. (proposed to be Part I.) of Schedule I. (improvements made after notice) to apply only to tenants holding under lease of which at least 3 years are unexpired, or under a two-yearly agreement; and in latter case only, if tenant gives notice to quit within 12 months after completion of improvement, except in case of death of tenant. (Section 4.)	- - -	Tenant to give 21 days' notice of claim (instead of two months.) Landlord to have right to claim irrespective of any notice of claim by tenant.	Omit Sections 10 and 11 and "substitute new clause empowering Board of Agriculture to appoint umpire." (a)	Allow appeal (Section 23) irrespective of amount of claim. Appeal to be heard and decided by assessor appointed by the Board of Agriculture (instead of County Court Judge).	- -	Include formation of silos. Provide that incoming tenant who purchases fixtures of an out-going tenant which landlord has refused to take to shall, at the termination of his tenancy, be in the same position as though he himself had erected them.	- - -	Extend period within which tenant may replevy his goods to 21 days (Section 51).	Definition of "tenant" — "The holder of land under a contract of tenancy." (Section 61.) Extend Act to market gardens, and omit "as to any holding let to the tenant during his continuance in any office appointment or employment held under the landlord." (Section 54.)	Omit Part I. Part II. to become Part I., and comprise:— 1. Drainage. 2. Laying down permanent pasture. 3. Making of water meadows or works of irrigation. 4. Making or improving roads or bridges. 5. Making or improving of water courses—ponds, wells, or reservoirs, or of works for the application of water power, or for supply of water for agricultural or domestic purposes. 6. Planting of orchards. 7. Reclaiming of waste lands. 8. Embankment and sluices against floods. Part III. to become Part II., and include consumption on the holding by horses, cattle, sheep, or pigs, of cake or other feeding stuff, whether purchased or produced thereon; also 1. Making and planting osier beds. 2. Making of gardens. 3. Making of fences. 4. Planting of hops. 5. Planting of fruit bushes. 6. Warping of land.	Act in all cases to supersede "custom." Provide compensation for disturbance for tenant receiving notice to quit owing to change of ownership. Board of Agriculture empowered to grant loans to landlords for carrying out improvements.	(a) Under Section 10 Board of Agriculture appoints umpire on application of either party.
2	BLANDFORD FARMERS' CLUB.	- - -	- - - - -	- - -	Sections 7 to 23 to be made clearer and more definite, and procedure simplified and cheapened.	- - -	Reference under arbitrators to be made final (Section 23).	- -	- - - - -	- - -	- - -	- - -	Reconsider First Schedule.	Act in the main fairly conceived.	—

Analysis of Suggestions received from Associated Chambers and Clubs—*continued.*

No.	Name of Chamber.	Compensation for Improvement. Section 1.	Improvements executed after Commencement of Act. Sections 3–5.	Regulations as to Compensation. Section 6.	Procedure.			Change of Tenant's Compensation and Notice to quit. Sections 29–33.	Fixtures. Section 34.	Crown, Duchy, Ecclesiastical, and Charity Lands and Resumption for Improvements, &c. Sections 41–43.	Distress. Sections 44–52.	General Provisions. Definitions, &c. Sections 53–64.	First Schedule.	Additional Suggestions and Opinions.	Notes.
					Notice of Claim. Section 7.	Reference. Sections 8–14.	Award. Sections 15–28.								
3	Bucks Chamber.	- - -	- - - -	- - -	Notice of claim simultaneously by landlord and tenant.	- - -	- - - -	- - -	- - -	- - -	- - -	- - -	Compensation for home-grown corn consumed on the holding.	Diminish technicalities of Act.	—
4	Canterbury Farmers' Club.	Strike out "on quitting his holding" and the proviso.	- - - -	- - -	Strike out "give notice in writing."	Substitute County Court Judge for Board of Agriculture (Section 10).	- - - -	- - -	- - -	Strike out "at the expiration of their current year of tenancy," and insert, "at the same time as the notice given to the tenant by the landlord to quit a part of his holding"—(Section 41).	- - -	- - -	Compensation for home-grown corn consumed on the holding.	—	—
5	Cheshire Chamber.	Adequate compensation for all improvements—fairly representing their value to incoming tenant.	- - - -	- - -	- - -	Board of Arbitration in each county to settle all differences between landlord and tenant.	- - -	- - -	- - -	- - -	- - -	- - -	Compensation for home-grown corn consumed on the holding.	Better security of tenure. Greater freedom of cultivation. Liberty to sell produce without detriment to the land.	—
6	Cleveland Chamber.	- - -	- - - -	- - -	- - -	- - -	- - -	- - -	- - -	- - -	- - -	- - -	Compensation for continuous good farming. Compensation for home-grown corn consumed on holding.	—	—
7	Darlington Chamber.	- - -	- - - -	- - -	Tenant to give 10 days' notice of claim. Landlord to give 10 days' notice of counter claim.	- - -	Referee to have 40 days (instead of 28 days) for making his award (Section 16).	- - -	- - -	- - -	- - -	- - -	Compensation for home-grown corn consumed by cattle, sheep, and pigs, on holding—tenant to keep an account of quantity crushed and consumed.	—	—
8	Gloucestershire Chamber.	- - -	- - - -	- - -	- - -	- - -	- - -	- - -	- - -	- - -	- - -	- - -	Compensation for home-grown produce consumed on holding.	—	—

Crown, Duchy, Ecclesiastical, and Charity Lands and Resumption for Improvements, &c. Sections 41-43.	Distress. Sections 44-52.	General Provisions, Definitions, &c. Sections 53-64.	First Schedule.	Additional Suggestions and Opinions.	Notes.
9	LANCASHIRE FARMERS' FEDERATION.	Omit proviso. Compensation for all improvements based upon actual expenditure, (*b*) unless such expenditure proved to be worthless in the opinion of the official valuer.	Capital improvements made by tenant to be subject to consent of landlord, or failing such consent on the certificate of an official valuer.	- - -	Landlord and tenant to send claims on same day—one month before expiration of tenancy — to Registrar of County Court.	Official valuers appointed by district councils.	- - -	- - -	- - -	- - -	Abolish law of distress.	- - -	Complete scale of compensation to be scheduled.	A "Tenant Right Bill" required.	(*b*) This was the basis adopted in the Agricultural Holdings Act of 1875. (Sections 8, 9.)
10	MILBORNE ST. ANDREW'S FARMERS' CLUB.	Compensation for all improvements.	- - - - -	- - - - -	- - - - -	- - - - -	- - - - -	- - - - -	- - - - -	- - - - -	- - - - -	- - - - -	Allowance in valuation for corn grown by consumer where a grinding record can be shown in same proportion as bought.	Compensation for capricious disturbance. Give tenant security in holding. Freedom of cultivation except last year of tenancy. Free sale of produce except last year of tenancy. Divide rates equally between owner and occupier. (*c*) No shooting to let over be tenant. (*c*) Equal right of tenant with landlord to all game. (*c*)	(*c*) Outside reference to Committee.
11	NORFOLK CHAMBER.	- - -	Record to be made at entry of state of buildings and condition of land. Good and clean cultivation to be scheduled for compensation unless rent is reduced by reason of foul and exhausted condition of land at time of entry.	Landlord's dilapidations to be scheduled and claim confined to Act, unless tenant is allowed to claim under custom and agreement, as well as under Act. Cross-cropping not to be a dilapidation unless land is left deteriorated and foul.	Landlord's counterclaim in one month. Landlord and tenant allowed to amend claims up to expiration of tenancy. No after-claims allowed.	- - -	- - -	- - -	- - -	- - -	- - -	- - -	Two years and older seeds to be paid for if a good plant, and the land clean and in good heart. Compensation for home-grown corn consumed on holding, if consumption certified and proved correct.	——	——

CENTRAL CHAMBER OF AGRICULTURE.

Report of the Committee on the Agricultural Holdings Act.

Addendum.

The Committee on the Agricultural Holdings Act (appointed February 4th, 1894) presented their Report to the Council on June 5th, 1894.

On the motion of Mr. Lipscombe, seconded by Mr. T. Carrington Smith, the Council received the report and resolved to consider it clause by clause.

Clauses 1 to 15, down to "recommendations," were adopted.

Clauses 16 and 17, "recommendations," were adopted.

Clause 18 was amended by the insertion of the word "alteration" after "erection" in Item, 1, Part I., of the First Schedule.

Clause 19 was adopted.

Clause 20 was amended as regards the proposed schedule of dilapidations for which a landlord may claim in the following particulars:—

Item (2). The words "without adequate manuring" added.

Item (4). The word "old" struck out and "permanent" inserted. After grass land the words "existing at the commencement of the tenancy, "towards which the landlord has contributed," inserted.

Item (6). The words "for which the tenant is liable" added.

Item (10). All after "without" in first line to "provided" in fourth line struck out, and the words "adequate manure being returned" inserted.

Clause 21 amended by striking out "fourteen" and inserting "twenty-eight" days as the period within which the landlord may amend his claim, and by the addition of the following words:—

"Provided that where the tenancy of the holding is determined at different periods with respect to the land and the buildings, the valuers or the umpires shall be empowered to make an interim award as to the matters affected."

[Note.—"Every such claim" should read "every such notice."

Clause 22. Verbal amendment made in first line of paragraph three, "appoint" struck out and "nominate" inserted.

Clause 23 adopted.

Clause 24 amended by striking out "ten" and inserting "twenty-eight" days for removal of fixtures.

Clauses 25 and 26 adopted.

Clause 27 amended by the addition of the words:—

"At a rate of interest not greater than 2¾ per cent. with a sinking fund upon the usual basis."

R. Henry Rew,
Secretary.

APPENDIX X.

(Handed in by the Duke of Richmond and Gordon, K.G., &c. See Question 22,574.)

FORM of LEASE used on the GOODWOOD ESTATE.

THIS INDENTURE made the day of one thousand eight hundred and , between the THE MOST NOBLE CHARLES HENRY DUKE of RICHMOND AND GORDON, K.G., of Goodwood, in the county of Sussex, of the one part, and in the parish of in the said county, farmer, of the other part. WITNESSETH that the said CHARLES HENRY DUKE OF RICHMOND AND GORDON doth hereby demise to the said his executors and administrators:—All those farm, farmhouse, lands and premises situate in the parish of , in the county of Sussex, and called or known by the name of , and which are more particularly mentioned and described in the Schedule hereto, and in the plan thereof, hereto annexed, reserving thereout unto the said CHARLES HENRY DUKE OF RICHMOND AND GORDON, his heirs and assigns: All timber trees, tellers, and trees likely to become timber, and the right of entry to cut, convert, and carry away all such timber, and for all reasonable purposes; And also reserving all chalk, clay, brickearth, gravel and stones, and substrata, with power to work, convert, and carry away the same and to make roads for that purpose, paying for any damage by valuation in the usual way; and also reserving power to take acres for any purpose other than agricultural purposes at three months' notice, paying for any crop or preparation for a crop which may be thereon, by valuation in the usual way; and also subject to the Ground Game Act of 1880, reserving to the said CHARLES HENRY DUKE OF RICHMOND AND GORDON, his heirs and assigns, all game, wild fowl, woodcocks and rabbits, with liberty for himself, his servants, and all other persons authorised by him, to hunt, course, shoot, kill, and carry away the same. To hold the same unto the said , his executors and administrators for the term of years from the 29th day of September, one thousand eight hundred and rendering therefor unto the said CHARLES HENRY DUKE OF RICHMOND AND GORDON, his heirs and assigns, the yearly rent of and rendering also the yearly over rent of fifty pounds for every acre of the pasture or meadow land which shall be broken up, and twenty pounds per acre for every acre of arable land which shall be cropped contrary to the covenants herein-after contained by the said his executors and administrators, and a proportionate rent for every less quantity than an acre so broken up or cropped.

And the said CHARLES HENRY DUKE OF RICHMOND AND GORDON and , do hereby mutually covenant and agree with each other:—

1.—That the term Landlord shall mean and include the said CHARLES HENRY DUKE OF RICHMOND AND GORDON, his heirs, executors and administrators, and the term Tenant shall mean and include the said , his executor, administrators, and assigns.

2.—That the said rent and any over rent which may accrue, shall be and be considered to be due and recoverable half-yearly, on the 25th day of March and the 29th day of September.

3.—The Tenant will pay all existing rates, taxes, and all outgoings at present assessed upon and payable in respect of the premises, except land tax, and landlord's income tax, and tithe rent charge, and half of such new and additional rates and taxes as may be hereafter assessed upon the premises.

4.—The Tenant will make the farmhouse the general residence of himself and family, will keep and leave at the end of the tenancy the dwelling-house, homestead, cottages and buildings in good repair, and tarred and painted (except repairs required in consequence of fire or other inevitable accident), will keep all gates, gate irons, stiles, posts, pales, rails, roads, ditches, drains and fences upon the premises in good repair, and will carry the materials necessary for all repairs (except for repairs required in consequence of fire, or other inevitable accident) from the distance of seven miles.

5.—The Tenant not to cut any coppice or underwood at less than eight years' growth, and not to cut without giving the Landlord one month's notice in writing. The Landlord to have power to mark to stand any saplings or tellers whether growing from stools or otherwise.

6.—The Tenant shall cutivate and manage the arable lands in a husbandlike manner, and shall keep the said lands clean and in good heart and condition, and during the last four years of the tenancy shall farm the lands upon the four-course system of husbandry, that is to say, one-fourth part in fallow or root crops, one-fourth part in Lent corn, one-fourth part in clover or good grass seeds, and the remaining fourth part in wheat.

7.—The Tenant will allow the Landlord, or succeeding Tenant, to sow in his Lent corn at the proper time in the last year of the tenancy, clean clover or other grass seeds, and will, at his own expense, properly harrow in and protect the same from injury.

8.—The Tenant shall on or before the 1st day of December in the last year of the tenancy give up to the Landlord or the succeeding Tenant one-fourth part of the arable lands of the said farm, which shall be in due course for a turnip lain, and permit and suffer the Landlord or succeeding Tenant to enter upon, and cultivate the same for a root crop. The Tenant will also give up to the Landlord or succeeding Tenant, on the 1st day of December in the last year of the term, proper and sufficient stabling and cart-house room, for horses and implements, for the preparation of the fallows, and also will provide from time to time sufficient hay and straw for the horses, being paid for the same at a consuming price.

9.—The Tenant will consume, by feeding stock on the farm during the last four years of the tenancy, all the hay, straw, haulm, and fodder, turnips, mangold wurzel, and other root and green crops, grown on the premises, except that he shall leave all the hay, straw, haulm, fodder and chaff grown or produced in the last year of the tenancy for the benefit of the Landlord, or his incoming tenant, upon being paid for the same at a feeding or consuming price by a valuation to be made in the usual way.

10.—All the manure and compost which shall arise, and be made, or brought upon the premises during the tenancy shall be used thereon, but the dung made in the last year of the tenancy shall be left in the yards for the use of the Landlord, or his incoming tenant, with power to either to either of them to use the same.

11.—The Tenant will year by year, and every year, weed and keep free from grass, and noxious weeds, all the corn, grain, pulse, root, and green crops, grown on the lands, and shall in every year between the months of October and March, trim and keep in good order all hedges and fences, and cleanse and scour the ditches and watercourses, and keep the drains free and open at the mouths.

12.—The Tenant will not mow any of the meadow land more than two years in succession without well manuring the same, nor mow the same meadow twice in any one year.

13.—The Tenant will not assign, underlet, except cottages, or part with the possession of the premises, or any part thereof, without the written consent of the Landlord.

14.—The Tenant, when required by the Landlord, will sign notices to warn off trespassers, and will permit his name to be used in any prosecution or action to be brought against such trespassers, the Landlord paying the expense of such action or prosecution.

15.—If the Tenant fails in the performance of any of the covenants herein on his part contained, or shall become bankrupt, or do any act whereby his effects upon the premises may be or become liable to be taken in execution or become vested in any other person, these presents shall become void, and the Landlord may re-enter as in his former estate, and saving always to the Landlord all rights of distress.

16.—The Landlord will find within seven miles of the premises, the sawn timber, bricks, tiles, slates,

Appendix A. X.

lime, tar, paint, and sand for such repairs, as the Tenant is hereby bound to execute, and in case of fire or injury by storm or tempest, the Landlord will rebuild at his own expense, including the cartage of materials, within a reasonable period.

17.—The Landlord will at the end of the tenancy pay or cause to be paid to the Tenant by valuation one half the cost of weeding the corn crops of the last year, for the hay, straw, haulm, and fodder at a feeding or consuming price, such valuation to be made by two valuers or their umpire in the usual way.

18.—The Landlord will pay the land tax and landlord's income tax and the tithe rent charge due and payable in respect of the demised premises, and half of such new and additional rates and taxes as may hereafter be assessed upon the premises.

19.—The tenancy of the cottages included in this demise may be determined by the Landlord giving one month's notice at any time to the Tenant for that purpose, and in such case a proportionate abatement of rent shall be made in respect thereof.

20.—The Tenant shall have the use of the barn and rickyards until the 25th day of March, after the expiration of the tenancy, for thrashing out his corn, rendering up the same in good repair; and shall thrash his corn of the last year at reasonable times, whereby he value of the fodder is not lessened and this proportion, that is to say, one third part, or thereabouts, to be thrashed between harvest and Christmas, one-third part between Christmas and the 1st day of February, the remainder on or before the 25th day of March.

21.—And it is hereby understood and agreed that either Landlord or Tenant shall express to the other, in writing, two years before the expiration of the tenancy, his desire that the same be renewed upon terms to be submitted by one to the other or others and mutually agreed on; and that if the said Landlord and Tenant shall fail to agree to terms for a renewal of the tenancy, then this demise, and the term hereby granted, shall cease, determine, and come to an end at the expiration of such term of 14 years.

In witness whereof the said parties have hereunto set their hands and seals the day and year first above written.

Signed, sealed, and delivered by the above-named CHARLES HENRY DUKE OF RICHMOND AND GORDON, in the presence of

---

Appendix A. XI.

APPENDIX XI.

(Handed in by His Grace the Duke of Richmond and Gordon, K.G., &c. See Question 22,599.)

ARTICLES, REGULATIONS, and CONDITIONS, on which are let the Farms, Crofts, and Possessions on the estates in the Counties of Aberdeen, Banff, Elgin, and Inverness.

FIRST.—The Leases shall be for the periods, for payment of the rents, and in favour of the persons specified in the extended Leases, excluding heirs-portioners, and assignees, legal and voluntary, and all sub-tenants.

SECOND.—The Proprietor reserves all mines and minerals, including stones, clay, marl, gravel, sand and others, with power to search for, work, manufacture and carry away the same, and to build houses, sink pits and make roads, railroads, and water-courses for that purpose upon the lands let. The Proprietor also reserves right to resume possession at any time of any part of the lands, for planting and sites for cottages and gardens. The Proprietor also reserves the right to regulate the use of all mill-dams, mill-leads, water-courses, main-drains, and burns, and the water therein, and right of access thereto, and of making alterations thereon; as also right to conduct springs and streams of water from or through the farms and possessions, for the use of other farms and possessions, or of mills or machinery, or for other purposes, and also reserves the use of all roads. And the Tenant shall be entitled to compensation for all damages caused by any of the Landlord's operations aforesaid; and the Tenant shall be entitled to an abatement of rent, for all land taken for such purposes and for all land or pasture resumed, all as the same shall be fixed by arbiters or an oversman, as provided in Article Eighteenth of these regulations.

THIRD.—The Proprietor reserves power to divide and allocate commonties, to make excambions, and to straighten and alter marches with neighbouring proprietors, and also to adjust the boundaries, of his own Tenants' possessions; a corresponding increase or abatement of rent, to be fixed by arbitration, being made to the Tenant according as the value of his possession may be increased or diminished.

FOURTH.—Subject to the provisions of the Ground Game Act, 1880, the Proprietor reserves all game, including deer and wild fowl on the respective lands, and all fish, with full power and liberty to himself and others having his permission to hunt, shoot, kill, and take the same.

FIFTH.—The Proprietor reserves the wood of every description, whether natural or planted, upon the possessions, and the whole woods and plantations on the estate, and the pasture therein, except where such pasture is expressly specified in the leases as being let. The tenant shall not suffer any bestial or sheep belonging to him or grazing upon his farm, to trespass in any woods or plantations, and shall be liable to pay to the proprietor for each offence, half a merk, scots or sixpence and two-thirds of a penny sterling, for each sheep, and two shillings sterling for each beast found trespassing, which payments shall be fractional and not penal, and not subject to modification. The Tenant shall be accountable to the Proprietor for the preservation of all growing timber from injury and damage by himself, family, servants and bestial. The Proprietor reserves right to cart and carry away all timber, unmanufactured and manufactured, from woods and plantations through the Tenant's lands, the Tenant being indemnified for surface damage thereto. And it is a special condition that the Tenant shall not let any grass or pasture for grazing or wintering sheep during the period between the first day of November and the first day of April, without the written consent of the Proprietor, under a penalty of two shillings and sixpence of additional rent for each sheep so taken in to graze or winter, payable, said additional rent, at the first term of Martinmas or Whitsunday after the contravention occurs.

SIXTH.—The Proprietor reserves all peat mosses, and the Tenants are precluded from cutting or carrying away peats, feal, or divot, except with the written consent of the Proprietor.

SEVENTH.—The Proprietor reserves all cottages and gardens, and the Tenant shall not be entitled to let or to allow any person to occupy any cottage or garden except under special agreement.

EIGHTH.—The Tenant shall be bound to reside personally with his family on his farm during the currency of the Lease.

NINTH.—The Tenant shall be entitled to follow any system of cropping he may prefer, but shall be bound at all times to cultivate the farm according to the rules of good husbandry, and properly to work, clean and manure the same and keep it in good heart and condition, and he shall annually apply to the Lands the whole dung made on the farm, except the dung made from the crop of the year immediately preceding the Whitsunday of removal. The Tenant shall consume on the farm the whole straw, turnips, and other green crops grown upon the farm in the year immediately preceding the Whitsunday of removal, and shall deliver over the dung produced therefrom to the Landlord or incoming tenant at valuation, as after-mentioned. The Landlord reserves the right at any time, by giving written notice to the Tenant, to prohibit and prevent the Tenant, should he think proper, from selling any straw, potatoes, turnips, or other green crop. The Tenant, in a Lease for a term of years, shall, during the last four years of the Lease or tenancy, be bound to consume on the farm the whole of the straw turnips, and other green crops.

TENTH.—The outgoing Tenant shall, at his removal, have a claim for compensation from the Landlord or

incoming Tenant, for the unexhausted value of lime and the extraneous manures after specified, purchased and applied to the arable lands, and also for the unexhausted value of the extraneous feeding stuffs after specified, purchased and used in feeding sheep or cattle in houses or yards and on arable land, as follows, viz. :—

Lime.—For the net cash price or value of lime, exclusive of carriage and cartage, under deduction of two-tenths thereof for the first crop grown or reaped after the application, two-tenths for the second crop, two-tenths for the third crop, and one-tenth for each of the four subsequent crops.

Bones.—For the net cash price or value of inch undissolved bones, exclusive of cartage, under deduction of four-tenths thereof for the first crop grown or reaped after the application, two-tenths thereof for the second crop, two-tenths thereof for the third crop, and one-tenth thereof for each of the two subsequent crops. For the net cash price or value of undissolved mixed bones, bone dust, and bone meal, exclusive of cartage, under deduction of six-tenths thereof for the first crop grown or reaped after the application, three-tenths for the second crop, and one-tenth for the third crop.

Dissolved Bones.—For the net cash price or value, exclusive of cartage, of dissolved bones, under deduction of four-fifths thereof for the first crop grown or reaped after the application, and one-fifth for the second crop.

Feeding Stuffs.—First, for such part of the net cash price or value of linseed, cotton or rape cake consumed by cattle in houses or yards, in the last year of the tenancy, as may be fixed by the arbiters when valuing the dung at the outgoing Tenant's removal, to be the value added to the dung by the consumption of such cake. Second, for the net cash price or value, exclusive of cartage, of linseed, cotton, or rape cake consumed by cattle or sheep, along with grass or turnips, on the land, under deduction of five-sixths thereof for the first crop grown or reaped after the crop along with which the cake has been consumed, and one-sixth for the second crop. Grass, whether grazed or cut, shall at all times be counted as a crop; and the way-going crops to be taken at valuation by the Landlord or incoming Tenant, as hereinafter provided, shall be held to be crops grown and reaped by the outgoing Tenant. All claims for compensation, must be accompanied by vouchers for the purchases a written declaration by the Tenant, certifying the dates and manner of the application or consumption of the article, and in the case of manures and feeding stuffs, by a guaranteed analysis, from a respectable merchant, from whom the same were purchased, and in all cases be substantiated by proof of the application or consumption of the articles and of the quality and value thereof.

ELEVENTH.—The Tenant by entering into an agreement for Lease shall be held to have satisfied himself as to the extent and boundaries of his farm, and to have accepted the whole buildings and fences on the farm belonging to the Proprietor as sufficient and in complete repair, and to have become bound at his own expense to uphold such buildings and fences, including hedges and paling for the protection thereof in that state during the currency of the Lease, and to leave them in the same at its termination. And the Tenant shall be bound to repay to the Landlord one half of whatever cost or outlay, if any, which the Landlord in his discretion may think proper to incur in any year or years of the Lease, for cutting and cleaning and upholding and keeping in repair all hedges on and around his possession, and of paling where necessary for the protection of the same, which paling the Tenant shall be bound to cart free of expense. The Tenant shall also be bound to erect sufficient march fences with neighbouring Tenants on the estates if sanctioned by the Proprietor; and all fences round plantations shall be kept up at the mutual expense of proprietor and Tenant, and in the event of the Proprietor erecting or being required by adjoining Proprietors to erect march fences, the Tenant shall be bound to perform his Landlord's share of all cartages, and to repay to the Landlord whatever expenses he may incur in keeping such fences in proper repair, and shall pay to the Landlord interest at the rate of five pounds sterling per centum per annum upon the cost to the Landlord of erecting the same. The Landlord shall make over to the incoming Tenant any claim which he may have against the outgoing Tenant in respect of the said buildings, fences including hedges and paling not having been maintained and left in complete repair by the outgoing Tenant, in consideration of the obligation to receive and uphold the same in repair in terms hereof which the incoming tenant undertakes. But nothing herein contained shall be considered as relieving the outgoing tenant of his obligation to leave the said houses and fences, including hedges and paling, in complete repair. Further, the Landlord shall have power at all times to order an inspection of the whole of said houses, fences and paling, and to cause such repairs from time to time to be made as may be necessary, including the painting of all doors, windows, and outside woodwork, once at least in every three years, the Tenant being bound to repay the expense of the said work, and to hold the tradesmen's receipts sufficient vouchers for the outlay.

TWELFTH.—The outgoing Tenant at his removal shall have a claim against the Landlord or incoming Tenant for (*first*) the value as it may be ascertained by arbitration as aftermentioned of all buildings erected by him at his exclusive expense, with the written consent of, and in accordance with plans and specifications approved of by the Proprietor, provided the said buildings shall have been kept in complete repair and shall be in that state at the Tenant's removal; (*second*) the value to be ascertained as above of all buildings which may have been erected by the Tenant at his exclusive expense without the Proprietor's approval, and also the value of any materials of buildings which may be upon the farm at the Tenant's removal, and for which he has paid at his entry, should the Landlord or incoming Tenant elect to take such buildings or materials or any part thereof at valuation, failing which the Tenant shall be entitled to remove them, it being provided that the tenant shall not be entitled to attach new buildings to existing buildings without the written permission of the Landlord.

THIRTEENTH.—In the event of the Landlord agreeing to perform the drainage of any part of the lands, the Tenant shall perform, without payment, the cartage of all materials, and in respect of all drainage so executed by the proprietor the Tenant shall be bound to pay along with the rent, interest at the rate of five pounds sterling per centum per annum, on the amount expended by the Proprietor, which per-centage shall commence to run from the first term of Martinmas or Whitsunday after the drains are finished, to be charged as rent, and to be recoverable in the same manner.

FOURTEENTH.—The Tenant shall be bound and obliged to keep the whole drains, outlets thereof, sluices, ditches, water-courses, mill-dams, mill-leads and embankments thereof, upon the farm, and mill-dams, and mill-leads and embankments thereof upon other lands leading to and required for the use of the farm, at all times clear and in good working order, and in proper and sufficient repair, and regularly to scour and keep in good working order all march ditches with neighbouring Tenants and Proprietors, and the Proprietor shall have power to order the inspection of all the above and cause the same to be cleaned, scoured, and repaired from time to time as he may see necessary at the expense of the Tenant, who shall be bound to pay the same, and the workmen's receipts shall be sufficient vouchers for the outlay. The Tenant shall further be bound to have the whole weeds on every part of his farm, including road-sides, water-sides, and sides and corners of fields, including the land under the way-going corn crop, cut or pulled before the first day of August in each year, and failing his doing so, the Landlord shall be entitled to employ workmen to cut or pull the same, and to charge the Tenant with the expenses of the work, which the Tenant shall be bound to pay, holding the workmen's receipts sufficient vouchers for the outlay.

FIFTEENTH.—The outgoing Tenant shall be bound at the first day of May preceding the Whitsunday of removal to deliver over to the Proprietor or incoming Tenant the fallow or green crop lot which shall have been once ploughed, and also the garden, and shall be bound at the fifteenth day of May before removal to deliver over to the Proprietor or incoming Tenant at least one half of the whole dung made upon the farm from the crop of the year immediately preceding the Whitsunday of removal. The outgoing Tenant shall farther be bound at the Whitsunday of removal to deliver over to the Proprietor or incoming Tenant the whole grass on the farm, together with the remainder of the dung and the straw. The outgoing tenant shall be

Appendix A. XI.

entitled to receive payment from the Proprietor or incoming Tenant at the Whitsunday term of removal of (*first*) the fair rent of the fallow land or green crop lot with the value of the labour bestowed on it; (*second*) the value of all sown grass which the arbiters or oversman may determine to be part of the arable land of the farm; (*third*) the value of the dung and straw, but the straw shall only be paid for in so far as it does not exceed a reasonable quantity for summer use beyond which the outgoing Tenant shall only be entitled to the value thereof as manure; and the whole of the said valuations shall be ascertained and fixed by arbitration as hereinafter mentioned. The outgoing Tenant shall also be bound to sell to the Proprietor or incoming Tenant the whole of the last crop of corn and straw which the Proprietor or incoming Tenant shall be bound to take at valuation, the quantity of grain to be estimated on the ground, and the sum to be allowed the incoming Tenant for harvesting, stacking, threshing, dressing, and carting to market the corn thereof, to be at the same time fixed all by arbitration at the time the crop is ready for cutting, which time shall be fixed by the arbiters or oversman. The price of the said corn and straw shall also be fixed and determined by arbitration immediately after the fiars prices of the County are struck, and shall be payable one half as nearly as may be computed at the term of Martinmas immediately after the crop is reaped, and the balance ten days after the fiars prices of the County are struck. And the Landlord and incoming Tenant shall have liberty to sow grass seeds in the shift which has the previous year been in green crop or fallow, at any time within eight days after the outgoing Tenant shall have sown corn therein, and the outgoing Tenant shall be bound to give the Landlord or incoming Tenant timeous notice of the proper time for sowing such grass seeds, and shall be bound to harrow in the same within three days after sowing, without charge. The Landlord shall be entitled to exact payment to himself from the incoming Tenant, and the incoming Tenant shall be bound to make payment to the Landlord of the amounts of all the aforesaid valuations of crop, grass, dung, straw, rent and labour of fallow or green crop lot, compensations for unexhausted manures, lime, and feeding stuffs, and valuations, if any, of buildings, at the respective terms and times at which the same are hereby declared payable. It is a special condition that in the event of the away-going corn crops exceeding in extent one half of the arable land on the farm, a deduction shall be made from the total valuations of the away-going crops corresponding to the excess in extent above the said one half, and for such excess the outgoing Tenant shall only be entitled to the value of the seed and the labour bestowed upon it. It is also a special condition that in the event of the shift for fallow to be given over to the incoming Tenant at the First day of May preceding the Whitsunday of removal being less than one-third or more than one-half of the extent of the land in corn crop, the Landlord or incoming Tenant shall be entitled to deduct from the aforesaid valuations a sum equal to three times the average yearly rent per acre of the arable land of the farm for every acre of such excess or deficiency on account of the loss and inconvenience he may suffer thereby. The outgoing Tenant shall not be entitled to plant potatoes in the last year of the tenancy and shall not be entitled to payment therefore if planted, or to remove them. In settling for the valuations and compensations with the outgoing Tenant, the Landlord shall be entitled to retain the amount of any arrears of rent which the outgoing Tenant may be due, or of any rent to become due under the outgoing Tenant's lease, as also the amount of any other claim which the Landlord may have against the outgoing Tenant.

Sixteenth.—The Tenant shall be bound not to burn any heather or muir on any part of the property, either by himself, his family, or servants, without the Landlord's written permission. And it is hereby declared that for every acre of muir burned without the consent of the Landlord or his factor, in any manner or by any person whatsoever, on any part of the muir ground or pasture occupied by the Tenant, an additional yearly rent at the rate of two pounds sterling for fifty acres shall be paid by the Tenant to the Landlord during the remainder of the lease in respect of the additional value to the Tenant of the muir so burned, and that over and above the rent stipulated in the lease, which additional rent shall commence and be payable at the first term of Martinmas after such muir burning, and shall be recoverable in the same manner as the original rent, and in the case of the said muir burning taking place on any common pasture, the Tenants using the common shall pay the said additional rent amongst them in proportion to the rents of their respective farms. Written permission as aforesaid will be given to burn to such extent, not exceeding one-fifteenth in any one year, as the Landlord shall think reasonable, subject to such regulations as may appear to him to be expedient for the effectual control of the fire and the proper supervision of the work.

Seventeenth.—The Tenant shall be bound in the last year of the lease to flit and remove himself, his family, servants and dependants, with their goods and gear, forth and from his farm or possession, as follows, viz., From the fallow land or land intended for green crop and the garden, on the First day of May; from the houses, natural pasture and grass land, on the Twenty-sixth day of May; and from the remainder of the land at the separation of the corn crop from the ground, and that without any previous warning or process of removing to that effect.

Eighteenth.—All questions as to the amount of compensation, damages, and valuations shall be determined by two arbiters, one to be named by each party, or an oversman, to be named by said arbiters, and whom they shall be bound to appoint before proceeding with the reference, to decide in the event of their differing in opinion, and the expense of such arbitrations and valuations shall be paid by the parties equally.

Nineteenth.—It is expressly stipulated that if a Tenant become notour bankrupt or be sequestrated, or shall convey his effects or part thereof in trust for behoof of Creditors, although not rendered notour bankrupt, the tack shall *ipso facto* immediately become null, and expire, and the farm revert to the Landlord without any declarator or other process of law being necessary to that effect. And, further, if the Tenant shall allow at any time one half-year's rent to remain unpaid when another half-year's rent shall become due, then and in that event it shall be optional to the Landlord to terminate the Lease, and in the event of his exercising such option, either immediately or at any term of Martinmas or Whitsunday thereafter, the Lease shall, as at the date of such exercise of his option, become null, and expire, and the farm revert to the Proprietor without any declarator or process of law to that effect; reserving the Proprietor's right to all rents due and to become due under the Lease, and all other claims and rights competent to the Landlord.

Twentieth.—It is understood with regard to Leases for more than one year, that the terms for the renewal of the Lease shall be adjusted two years before the expiry of the current Lease, and in the event of the Landlord and Tenant not coming to an agreement for a new Lease two years before the expiry of the current Lease, then, and in that case, such current Lease shall cease, determine and come to an end at the term of expiry therein mentioned, and the Tenant shall be bound to remove from the farm and lands without further notice, as specified in Article Seventeenth hereof. In cases where there are no Leases or Leases for one year only, one year's notice of removal shall be given by either party.

Twenty-First.—And I, The Most Noble Charles Henry Gordon Lennox, Duke of Richmond, Gordon and Lennox, consent to the registration hereof, for preservation and execution. In witness whereof these presents, written upon this and the seven preceding pages, by James Pillans Russell, Clerk to John Clerk Brodie and Sons, of Edinburgh, Writers to the Signet, are subscribed by me at Goodwood, Chichester, on the Twenty-second day of January, in the year Eighteen Hundred and Eighty-three, before these witnesses, Charles Henry Gordon Lennox, Earl of March, Member of Parliament for West Sussex, and Lord Algernon Gordon Lennox, Lieutenant-Colonel Grenadier Guards. (Signed) Richmond and Gordon. March, Witness. Algernon G. Lennox, Witness.

(Recorded in the Books of Council and Session, 24th January, 1883.)

EXPLANATORY NOTES.

The *Diagram* gives the course of prices in England according to my *Index Numbers* of 45 commodities (before 1846 only 31 principal commodities). It formed part of my paper on "Prices of Commodities and the Precious Metals," and was first published—with movements up to 1886—in the Journal of the Royal Statistical Society. The commodities comprise the following, some of the more important articles being represented by two descriptions: Wheat, flour, barley, oats, maize, potatoes and rice, beef, mutton, pork, bacon and butter, sugar, coffee and tea, iron, copper, tin, lead and coals, cotton, flax, hemp, jute, wool and silk, hides, leather, tallow, palm-oil, olive-oil, linseed-oil, petroleum, soda, nitrate, indigo and timber.

The *Index Numbers* have been constructed in the following manner: The average prices of the 11 years 1867-77—which in the aggregate are equivalent to the average of the 25 years 1853-77—were called 100 in the case of each commodity and the percentage variation was calculated for each year; for instance English wheat, average 1867-77=54/6d. ₱ qtr. equal to **100**, average price in 1855=74/8d. equal to **137** (or 37 per cent. *above* the average point) and average price 1893=26/4d. equal to **48** (or 52 per cent. *below* the average point). The percentage figures of all articles in each year were added together and divided by the total number of commodities and the figure thus obtained formed the Index Number for the respective year, for instance, 1893, total numbers of 45 commodities=3061, Index Number **68** or 32 per cent. *below* the average point. The Index Number is therefore the arithmetical mean, all articles being considered as of equal value. By the test of quantities—according to the importance of each article—the result was found to be perfectly reliable.

AUGUSTUS SAUERBECK, F.S.S.,
3, MOORGATE STREET BUILDINGS, LONDON.

Average Prices of all Commodities in each year,
Average of 1867-77 being 100.

Average Prices of 10 years ending with the year named, viz.:
Dotted line in 1852 = 82, being Average of the 10 years 1843-1852.
,, ,, 1873 = 102, ,, ,, ,, ,, 1864-1873.
,, ,, 1893 = 71, ,, ,, ,, ,, 1884-1893.

This dotted line gives the best picture of the gradual movement of the average prices of whole periods as the fluctuations from year to year are obliterated.

[As the dots represent the average of the 10 years *preceding* any given date, the resulting curve is projected somewhat beyond its true position.

Difficulties of this kind are best avoided when the average curve is sketched by a careful freehand draft. Such a draft, made by Mr. Sauerbeck, is here shown in the blue line on the chart. H.S.F]

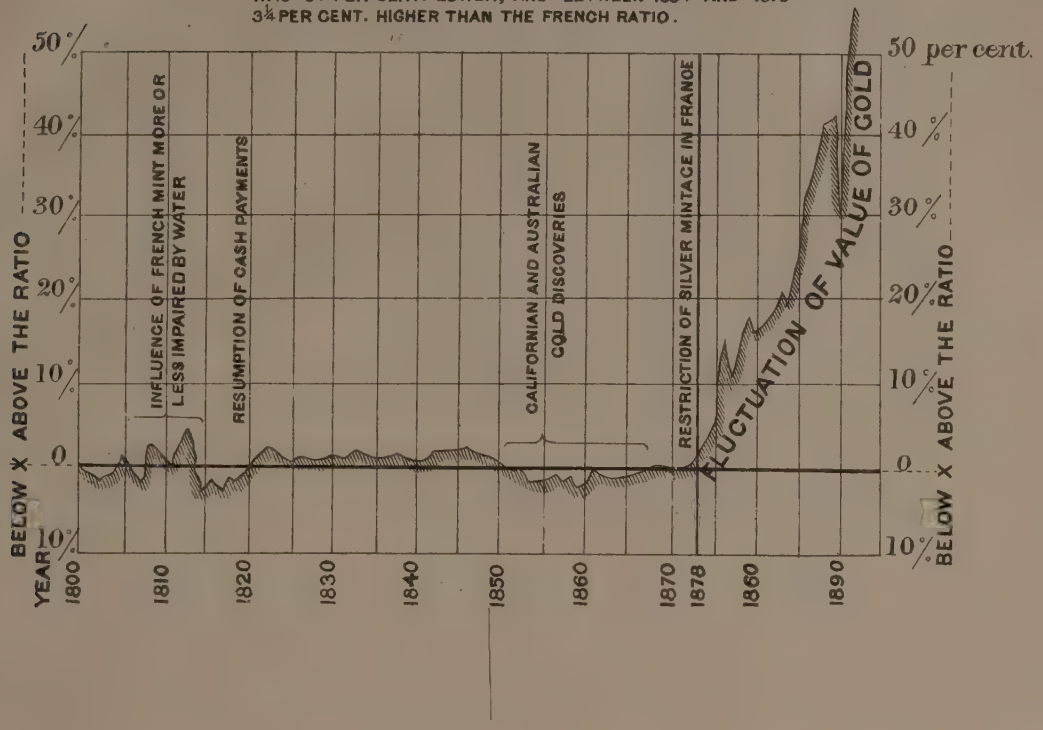
APPENDIX XIII.

Handed in by Professor Foxwill. (See Q. 23845.)

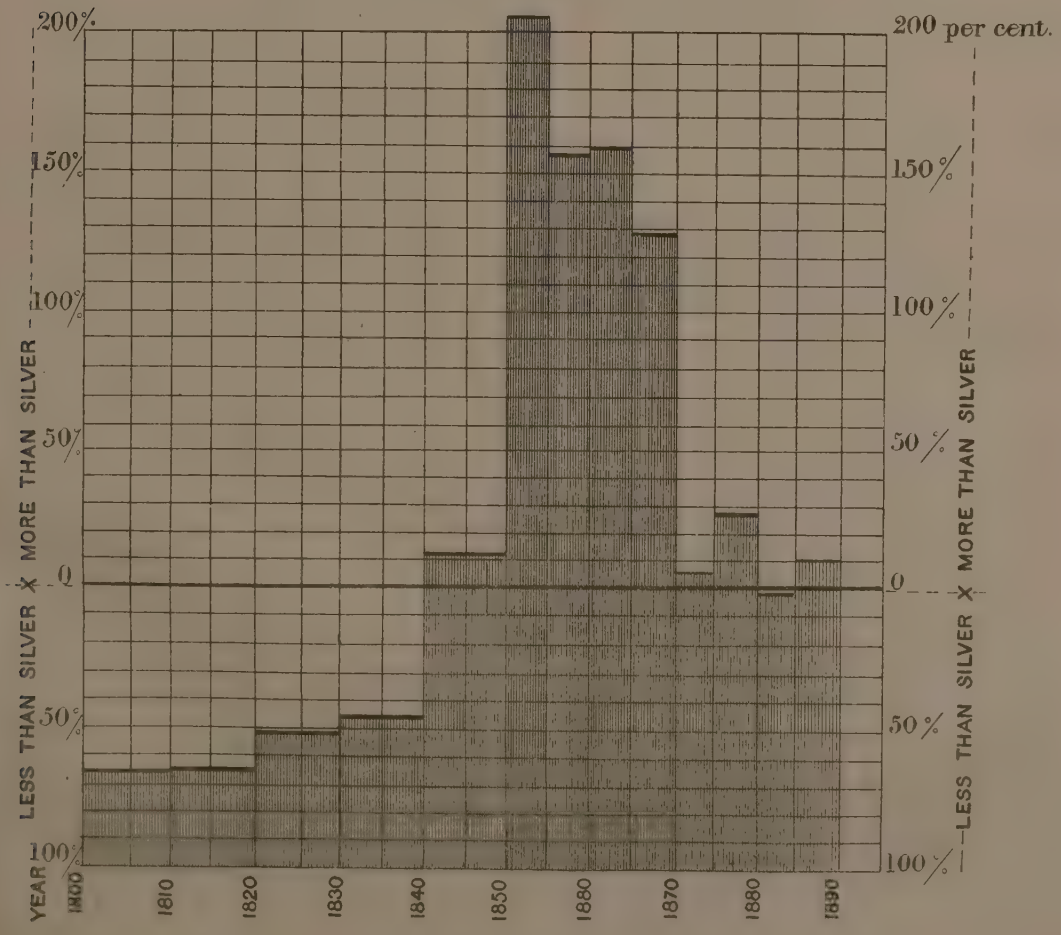
DIAGRAMS PREPARED BY SIR GUILFORD MOLESWORTH FOR THE BRUSSELS MONETARY CONFERENCE.

No. 1. ANNUAL AVERAGE FLUCTUATION IN THE VALUE OF GOLD MEASURED BY SILVER PER CENT. ABOVE OR BELOW THE FRENCH MINT RATIO OF 15½ TO 1.

NOTE. BETWEEN 1800 AND 1834 THE UNITED STATES MINT RATIO WAS 3¾ PER CENT. LOWER, AND BETWEEN 1834 AND 1873 3¾ PER CENT. HIGHER THAN THE FRENCH RATIO.



No. 2. RELATIVE PRODUCTION OF GOLD (IN VALUE AT THE RATIO OF 15½ TO 1) MEASURED BY THE PRODUCTION OF SILVER.



APPENDIX XIV.

Copy of Lease on the Earl of Strathmore's Estate.

(Handed in by Mr. A. Ralston. See Question 24,976.)

IT IS CONTRACTED AND AGREED between the Right Honourable Claude Bowes Lyon, Earl of Strathmore and Kinghorne, Heritable Proprietor of the farm and lands after mentioned, on the one part, and

on the other part, in manner following:—That is to say, the said Earl (herein-after called the Proprietor), in consideration of the rent and other prestations after written, and under the reservations and conditions after expressed, hereby lets to the said (herein-after called the Tenant) and his heirs, excluding heirs-portioners, the eldest heir-female succeeding without division; and also excluding, except with the previous written consent of the Proprietor, sub-tenants, and assignees legal or voluntary, and creditors or managers for creditors in any way or shape, but with power to the Tenant to destine this lease to any of his children, or to his widow, all and whole

Subjects included in lease.

Duration.

And that for the period of years from and after the term of

Reservations—

(1.) Minerals.

Reserving always to the Proprietor the whole coal, lime, marle, stone, clay, slate, sand, and other minerals and metals within the farm, with power to search for, work, win, manufacture, and carry away, or to let, sell, or dispose of the same, and to make all pits, mines, quarries, roads, aqueducts, buildings, and works necessary therefor: as also reserving to the Proprietor power to resume any part or parts of the farm, not exceeding acres imperial measure in whole, he being at the expense of making and upholding fences around all ground so resumed that may be planted or otherwise appropriated so as to render fences necessary; as also to straighten or alter marches, and excamb ground with any neighbouring proprietor or tenant, and to make, alter, and use, or to shut up roads upon the farm;—the yearly value of any ground that may be added to the farm by excambions or alterations of marches being to be added to the rent herein-after stipulated, and the value, or damage done to the yearly value, of any ground that may be taken from the farm, or damaged by any of the operations before mentioned, being to be deducted from the said rent, as such values and damages shall be ascertained by two arbiters, one to be chosen by each party, or by an oversman to be named by the arbiters in case of their differing in opinion, declaring always that it shall not be competent to the Tenant to make any claim for damages alleged to have been done in any year of this lease whereof the rent has been paid, and unconditionally discharged: reserving also to the Proprietor all trees on the farm, with power to prune, cut, and remove them, and to plant others in their place, or in the hedges and marches, without payment of compensation; and also all water in streams or springs rising in or flowing through the farm, subject to the proper use thereof by the Tenant for the purposes of the farm only; and also the game on the farm, and the fish in the rivers and streams, with the exclusive privilege to the Proprietor, and such persons as may be authorised by him, of shooting, sporting, and fishing, subject always to such rights as may be competent to the Tenant under "The Ground Game Act, 1880," as incident to and inseparable from his occupation of the farm; and it is hereby agreed, with reference to the terms of "The Game Laws Amendment (Scotland) Act, 1877," that the amount of annual damage done to the Tenant's crops by game (other than ground game as defined by the first-mentioned Act), for which no compensation shall be due, shall be the sum of , and that any claim of damage beyond that sum arising under the said Act shall be referred to arbitration, and that no compensation shall, in any case, be due for damages done by ground game; which tack, with and under the reservations and conditions before and after written, the Proprietor binds himself to warrant at all hands: For which causes and on the other part, the said binds and obliges himself and his heirs, executors, and successors whomsoever, to pay to the said Earl of Strathmore and Kinghorne and his successors, and to his or their assignees, or to their factor for the time, at Glamis Castle, or such other place as they may appoint, the yearly rent of at two terms in the year Candlemas and Lammas by equal portions, beginning the first term's payment at Candlemas and the second at Lammas following, in full of the rent for crop and the first year's possession under this lease, and so forth half-yearly during this lease, but declaring that the rent of the last crop shall be payable at the term of Martinmas after reaping that crop: As also to pay along with the rent at Candlemas yearly the premiums on a policy or policies of insurance against fire to be effected by the Proprietor in his own name on the houses, crop, and stocking on the farm, the amount of insurance not exceeding on the houses, nor a year's rent on the crop and stocking; with a fifth part more of each term's payment of the said rent and premiums of insurance of penalty in case of failure, and interest at the rate of five per cent. per annum from and after each term of payment during the not-payment: As also to perform his share of carriages of all materials necessary for rebuilding or repairing the church and churchyard dyke, manse, and offices, of the parish of or, in the option of the Proprietor, to pay a proportion of the expense of performing such carriages corresponding to the rent of the farm: Further, the Tenant obliges himself, during the lease, to reside upon the farm, and to keep thereon a sufficient stocking of every kind, which shall be *bonâ fide* his property, and to crop and cultivate the lands according to the rules of good husbandry; and, in particular, without prejudice to the foregoing generality, to follow the rotation and mode of cropping after specified, viz.:—

Appendix A. XIV.

(1.) Rent.

(2.) Insurance premiums.

(3.) Carriages.

(4.) Residence on farm, stocking, cropping, &c.

Note.—The cropping clause to be adjusted with each Tenant on his entry. If a Tenant deems it expedient to alter the course of cropping during the currency of his lease, he may make written application for the Proprietor's permission, stating change desired.

(2.) Power to resume land.

(3.) Power to straighten marches or excamb.

(4.) Trees.

(5.) Streams and springs.

(6.) Game.

Warrandice clause.

Tenant's obligations.

And in case the Tenant shall, without the Proprietor's approval, crop or manage the farm in a manner contrary to any of the preceding regulations, whereby the land or any part thereof shall become fouled or deteriorated, he binds himself to pay to the Proprietor such sum in name of damages for the ground so fouled or deteriorated as shall be ascertained by two arbiters or an oversman to be chosen as aforesaid, and that along with the rent before stipulated in the year or years in which such damage shall arise, without prejudice nevertheless to the Proprietor's right to put a stop to irregular cropping or mismanagement: And the Tenant further binds himself not to sell, remove, or dispose of any fodder, or turnips, or other manure-producing article raised upon the farm,—excepting only potatoes and hay, the produce of not more than acres in any year,—but to consume the same upon the farm, and to apply annually to the lands the whole manure made on the farm: And it is hereby agreed, with respect to unexhausted manures, and to feeding stuffs consumed upon the farm, that the Tenant or his executors shall, at the expiry or sooner termination of the lease, receive compensation for the same from the Proprietor or incoming Tenant, in terms of the schedule annexed and signed as relative hereto, —such compensation to be ascertained, in case the parties fail to agree about it, by two arbiters or an oversman to be chosen as aforesaid: And the Tenant binds himself, in the last year of this lease—(1.) To allow the Proprietor or incoming tenant to sow grass seeds in such fields as fall to be sown out in that year, provided they do so within five lawful days after written notice by the Tenant that the ground is ready for being sown, the Tenant being bound to harrow and roll in the said seeds, and to protect the grass of said seeds from being pastured by cattle or sheep or otherwise injured, without compensation; (2.) To apply the whole dung made before turnip seed-time to the green crop of that year, and to leave the whole dung made after sowing the last green crop, and also the straw on the farm, to the Proprietor or incoming Tenant (who shall be bound to take the same) at such valuation as shall be put thereon by two arbiters, one to be chosen by

Fodder, turnips, &c. to be consumed on farm.

Provisions for last year of lease—

(1.) Compensation for unexhausted manures and feeding stuffs.

(2.) Sowing of grass seeds by proprietor or incoming tenant.

(3.) Disposal of dung made before and after turnip seed time.

Appendix A. XIV.

the Proprietor or incoming Tenant and the other by the Tenant, or by an oversman to be named by the arbiters in case of their differing, declaring always that the amount of such compensation shall not exceed ten per cent. of the rent of the farm, and that the dung shall be valued according to the value in the district of ordinary farmyard manure, without reference to any increased value which it may have by reason of feeding stuffs consumed by the Tenant's cattle; (3.) To leave the whole waygoing fodder and grain crop, and also the waygoing crop of turnips, to the Proprietor or incoming Tenant (who shall be bound to take the same), —the grain crop at the fiars prices of the county of Forfar for that crop, and the fodder and turnip crop at such valuation as shall be put thereon by arbiters or an oversman to be chosen as aforesaid; and the quantity and quality of the grain and the value of the fodder shall be ascertained by arbiters or an oversman to be chosen as aforesaid, within ten days before the crop is ready for harvesting, and one-half of the value, as nearly as may be, as the said arbiters or oversman shall fix, shall be paid at Martinmas after reaping, and the remainder when the fiars of the crop shall have been struck; and the value of the turnip crop shall be ascertained on or before the tenth day of October; declaring that the Proprietor or incoming Tenant shall, in accounting with the Tenant, be entitled to such allowance for cutting and stooking the grain crop as shall be fixed by the said arbiters or oversman; (4.) To allow the Proprietor or incoming Tenant to occupy as many houses on the farm as he may require for lodging his servants and horses while leading in the waygoing crop, or while ploughing for the ensuing crop which he shall have right to do, in the case of each field, after the crop of that field has been led in;

(4.) Waygoing crops to be left to Proprietor or incoming tenant.

(5.) Houses for servants and horses to be at disposal of Proprietor or incoming tenant.

NOTE.—At the commencement of the lease, the Proprietor and Tenant to arrange as to the new buildings, fences, and drains, if any, required for the farm. The Proprietor will execute the improvement so arranged for without charging interest,—the Tenant performing the carriage of materials free of charge.

Houses, dykes, fences, &c. on farm.

the Tenant hereby accepts the whole houses, dykes, fences, ditches, and drains on the farm, as being in good tenantable condition and sufficient for the farm, declaring that in case, during the currency of the lease, he shall require any additional houses to be erected, or fencing or draining to be executed, the Proprietor shall erect or execute the same, if and so far as he approves of them, the Tenant performing all carriages of materials free of charge, and paying, as he hereby binds himself to pay, interest on the Proprietor's expenditure, at the rate of five per cent. per annum during the remainder of the lease, and that half-yearly along with his rent; or, in the case of draining, the Tenant may, in his option, elect to open and fill the drains at his own expense, at the Proprietor's sight and to his satisfaction, the Proprietor, in that case, supplying him with tiles for the same, free of charge, at the tile-work; and the Tenant binds himself during the lease to uphold, and at his removal to leave, the whole houses, dykes, gates, and fences, made or to be made on the farm, in a proper habitable and fencible state, and always to keep, and at his removal to leave, all the ditches and drains, made or to be made, properly scoured and in good order; and in case of the Tenant neglecting to fulfil these obligations, the Proprietor shall have power to order the necessary repairs to be executed at the Tenant's expense, and the Tenant binds himself to pay the Proprietor the cost of such repairs, as the same shall be ascertained by the tradesmen's receipts: And it is further provided and declared that, in the event of either party failing to name an arbiter for any of the purposes herein-before provided, it shall be lawful for the sheriff of the county on the application of either party, to name two arbiters, who shall have power to appoint an oversman, and the award of the arbiters or oversman so named shall have the same force and efficacy as if the arbiters so named had been nominated by the parties respectively, and as if the oversman had been named by arbiters nominated by the parties; and both parties bind themselves to fulfil such award accordingly: And in case the Tenant shall, at any time during the lease, become bankrupt, or be sequestrated, or voluntarily divest himself of his property by trust-deed for behoof of creditors or otherwise, or allow one half-year's rent to remain unpaid when the first half-yearly payment of the next year's rent shall have become due, or fail to reside on the farm, then, and in any of these events, it shall be in the power of the Proprietor to put an end to this lease, and to resume possession of the farm without any declarator or process of law for that effect; and in case, on the Tenant's death during the currency of the lease, there shall be an arrear exceeding one-half year's rent, it shall be in the option of the Proprietor to declare that his heir shall not take up the lease, but that the same shall come to an end at the first term of Martinmas thereafter: And further, the Tenant binds himself to remove himself and his family, servants, goods, and effects, from the farm at the expiry of the lease without any warning or process of removing; and failing his doing so, then he binds himself to pay the sum of as a pactional and not a penal rent for each year he shall possess the farm or any part thereof after the expiry hereof, and proportionally for any part of a year, but without prejudice to the Proprietor's right to insist in a summary process of removing, as accords of law; and both parties bind themselves to implement their respective parts of the premises to each other, under the penalty of to be paid by the party failing to the party observing, or willing to observe his part thereof, over and above performance; declaring that the obligations herein before undertaken by or imposed upon the parties hereto under the descriptions of "the Proprietor" and "the Tenant," shall be held to be applicable to, and binding upon, the successors of the said parties respectively as Proprietors and Tenants for the time of the farm hereby let, and all other persons who are, or may be, legally bound as representing the said parties respectively for fulfilment of the said obligations; and in like manner the stipulations and obligations in favour of the said parties under the same descriptions shall be available to, and may be enforced by, the successors and representatives of the said parties respectively: And they consent to registration hereof for preservation and execution: IN WITNESS WHEREOF,

Tenant's obligation to remove at end of lease.

Proprietor and Tenant's obligations binding on their successors.

Sheriff may, in certain case, name arbiters.

Optional irritancy in case of bankruptcy, &c.

Schedule referred to in foregoing Lease (*see Question* 25,013).

1. *Lime applied to Land.*—Eight-tenths of cost after first crop has been taken; five-tenths after second crop; three-tenths after third crop; and one-tenth after fourth crop.
2. *Crushed Bones, Bone Dust, Police Manure, and other Manures of equivalent value.*—One-half of cost where one crop has been taken, and one-fourth where two crops have been taken.
3. *Dissolved Bones, Bone Phosphate, and Guano.*—One-fourth after first crop has been taken.
4. *Feeding Stuffs.*—For linseed, cotton cakes, or other substances of equal manurial value which have been consumed on the farm by cattle or sheep during the last year of the lease, one-third of the value shall be paid, provided the quantity shall not exceed the average of the preceding three years.

NOTES.—(1.) Vouchers in all cases to be produced, and also an analysis by a competent analytical chemist if required.

(2.) In cases of arbitration, the arbiters to be entitled, in fixing the compensation, to make such deductions as they think fit, if, in their opinion, the manurial value of the substances has been reduced through the Tenant's fault or negligence; or if, through his fault or negligence, the land is in such a state of cultivation as to prevent the substances having their proper beneficial effect on the soil.

(3.) No allowance to be made to the Tenant for the cartage of lime, manure, or feeding stuffs, or for the cost of applying the manure to the land.

(4.) No compensation will be allowed for nitrate of soda, sulphate of ammonia, or other such stimulating manures, these being held to be exhausted in the year they are applied.

APPENDIX XV.

(*Handed in by Mr. H. H. Scott. See Question* 30,055.)

The Report of a Committee composed of Land Agents and Farmers of the "Newcastle Farmers' Club," appointed for the purpose of framing a Basis on which to estimate Compensation as provided in the "Agricultural Holdings Act, 1883.

It is provided for in the Act that a tenant at the termination of his tenancy shall obtain from the landlord such compensation "as fairly represents the value of the improvement to an incoming tenant."

It appears to your Committee that, fixing a scale naming a hard-and-fast value for every "improvement" named in the Act, whether well or ill executed, whether in good or bad repair, and reducing the price by a certain per-centage for each year used, would in effect and incidence be unjust, resulting in the good farmer getting too little and the bad farmer too much. For instance, in regard to under drainage, it cannot be said that if badly planned and executed and kept in bad repair, it would be of the same value to the landlord or incoming tenant as if it had been efficiently made and kept in good repair; or that the application of purchased manures, or the consumption of purchased foods would leave the same manurial value in a holding full of weeds, badly cultivated and managed, as on that clean, thoroughly cultivated, and well managed. Therefore, to obviate as much as possible the unequal operation of the Act, your Committee propose a basis on which "improvements" may be estimated, having a certain degree of elasticity; so that arbiters may have sufficient scope to arrive at decisions, which will not only tend to encourage tenants permanently to improve their holdings, but also prevent the danger of landlords or incoming tenants having to pay for that which has been so badly made or treated that it is exhausted, and little more left in the shape of an improvement than a name.

Your Committee suggest that, in regard to each "improvement" (with one exception), there should be compensation of three degrees, viz., 1st class, 2nd class, and 3rd class. The 1st class to mean that when in regard to an "improvement" the effects were very beneficial, from the management generally having been good and judicious; 2nd class, when these conditions had not been so meritorious; and 3rd class, when the conditions had been bad.

As the improvements scheduled in Part I. of the schedule to the Act require the consent of the landlord, and are therefore likely to be a matter of arrangement between landlord and tenant as heretofore, your Committee do not attempt to lay down any basis on which to estimate their value.

Part II. of the Schedule to the Act.

1. Under drainage:
   1st class—Estimated to last 35 years as a maximum.
   2nd class ,, 25 ,,
   3rd class ,, 15 ,,
   Exhaustion to be estimated in 1st class at $\frac{1}{35}$ part of first cost in each year since made, 2nd class, at $\frac{1}{25}$, and 3rd class at $\frac{1}{15}$ in each year.
2. Surface drains:
   That the outgoing tenant be repaid the reasonable first cost of open drains, minus the cost of putting the drains into efficient working order, provided the said drains have been executed in proper manner and method.

Part III. of Schedule to the Act.

3. Boning of land with undissolved bones:

	Arable land and hay meadow.	Pasture land.
1st class—Exhaustion each crop	$\frac{1}{5}$	$\frac{1}{10}$
2nd class ,,	$\frac{1}{4}$	$\frac{1}{8}$
3rd class ,,	$\frac{1}{3}$	$\frac{1}{6}$

4. Liming of land (magnesian limestone and gas lime excepted):

	Arable land and hay meadow.	Pasture.
1st class—Exhaustion each crop	$\frac{1}{10}$	$\frac{1}{20}$
2nd class ,,	$\frac{1}{8}$	$\frac{1}{16}$
3rd class ,,	$\frac{1}{6}$	$\frac{1}{12}$

5. Dissolved bones and phosphates, phosphatic guanos, ground phosphates, kainit and fish guano:

	On arable land and hay meadow.	Pasture.
1st class—Exhaustion each crop	$\frac{1}{3}$	$\frac{1}{8}$
2nd class ,,	$\frac{1}{2}$	$\frac{1}{4}$
3rd class ,,	all	$\frac{1}{2}$

6. Ammoniacal guanos:

	On arable land and hay meadow.	Pasture.
1st class—Exhaustion each crop	$\frac{1}{4}$	$\frac{1}{8}$
2nd class ,,	$\frac{1}{2}$	$\frac{1}{4}$
3rd class ,,	all	$\frac{1}{2}$

7. Sulphate of ammonia and nitrate of soda. That no compensation be paid for these manures when applied to arable land.
8. When applied to grass land:
   1st class—Exhaustion each crop - $\frac{1}{3}$
   2nd class ,, - $\frac{1}{2}$
   3rd class ,, - all
9. Farmyard manure:

	On arable land and hay meadow.	Pasture.
1st class—Exhaustion each crop	$\frac{1}{5}$	$\frac{1}{9}$
2nd class ,,	$\frac{1}{4}$	$\frac{1}{7}$
3rd class ,,	$\frac{1}{3}$	$\frac{1}{6}$

10. Town manure (Scavenger):
    1st class—Exhaustion each crop, $\frac{1}{4}$ on arable and pasture.
    2nd class—Exhaustion each crop, $\frac{1}{3}$ on arable and pasture.
    3rd class—Exhaustion each crop, $\frac{1}{2}$ on arable and pasture.

Residuary manurial value left by the consumption of (purchased) artificial and other foods. For every ton used:

	Value of residuum. £	s.	d.
Decorticated cotton cake (containing about 6 per cent. nitrogen, 16 per cent. oil	3	0	0
Linseed and rape cake ($4\frac{1}{2}$ per cent. nitrogen, 11 per cent. oil)	2	10	0
Undecorticated cotton cake (3 per cent. nitrogen, 6 per cent. oil)	2	0	0
Beans, peas, tares, lentils, linseed, malt dust	1	10	0
Wheat, oats, barley, bran, maize, malt	1	2	0
Hay and locust beans	0	16	0
Straw of beans, oats, wheat, barley, and peas	0	11	0
Potatoes	0	4	0
Mangel wurzel, carrots and turnips	0	3	0

Manurial residue from the foregoing foods:

	On arable land and hay meadow.	Pasture.
1st class—Exhaustion each crop	$\frac{1}{4}$	$\frac{1}{6}$
2nd class ,,	$\frac{1}{3}$	$\frac{1}{4}$
3rd class ,,	$\frac{1}{2}$	$\frac{1}{3}$

"Crop" in every case to mean the produce of one year.

It is not pretended that the manures and foods enumerated are exhaustive of those in the market, but your Committee have dealt with those most commonly used in the district; others not mentioned can be estimated by comparing them to those mentioned of like character and quality.

When a crop of hay is taken from pasture land it should be counted as having the same effect as a crop from arable land.

The onus of proof to rest on the person claiming compensation that the manures and foods were pure of their kind, and not charged at more than their fair market value.

In conclusion, your Committee have to say that they are strongly impressed with the conviction that the practical working and effect of compensation, so regulated and scheduled as they have put it, would be a general and constant attempt on the part of tenants to secure, by good farming, compensation of the 1st class. The three classes would always be present in their mind, and whilst trying for the higher or highest rate of compensation—pursuing their own interest—they would necessarily be acting for the permanent good of the holding; and the probable (and, indeed, reasonable) outcome would be a vast advance and improvement in the agriculture of the country, with advantage to the landowner, the tenant, and the consumer.

	6,920 19 0½				5,174 6 2¾					1,926 16 7¼

In the above 13 parishes on an actual tithe of 5,174*l.* no less than 1,926*l.*, or 37¼ per cent., was overpaid in 1893.

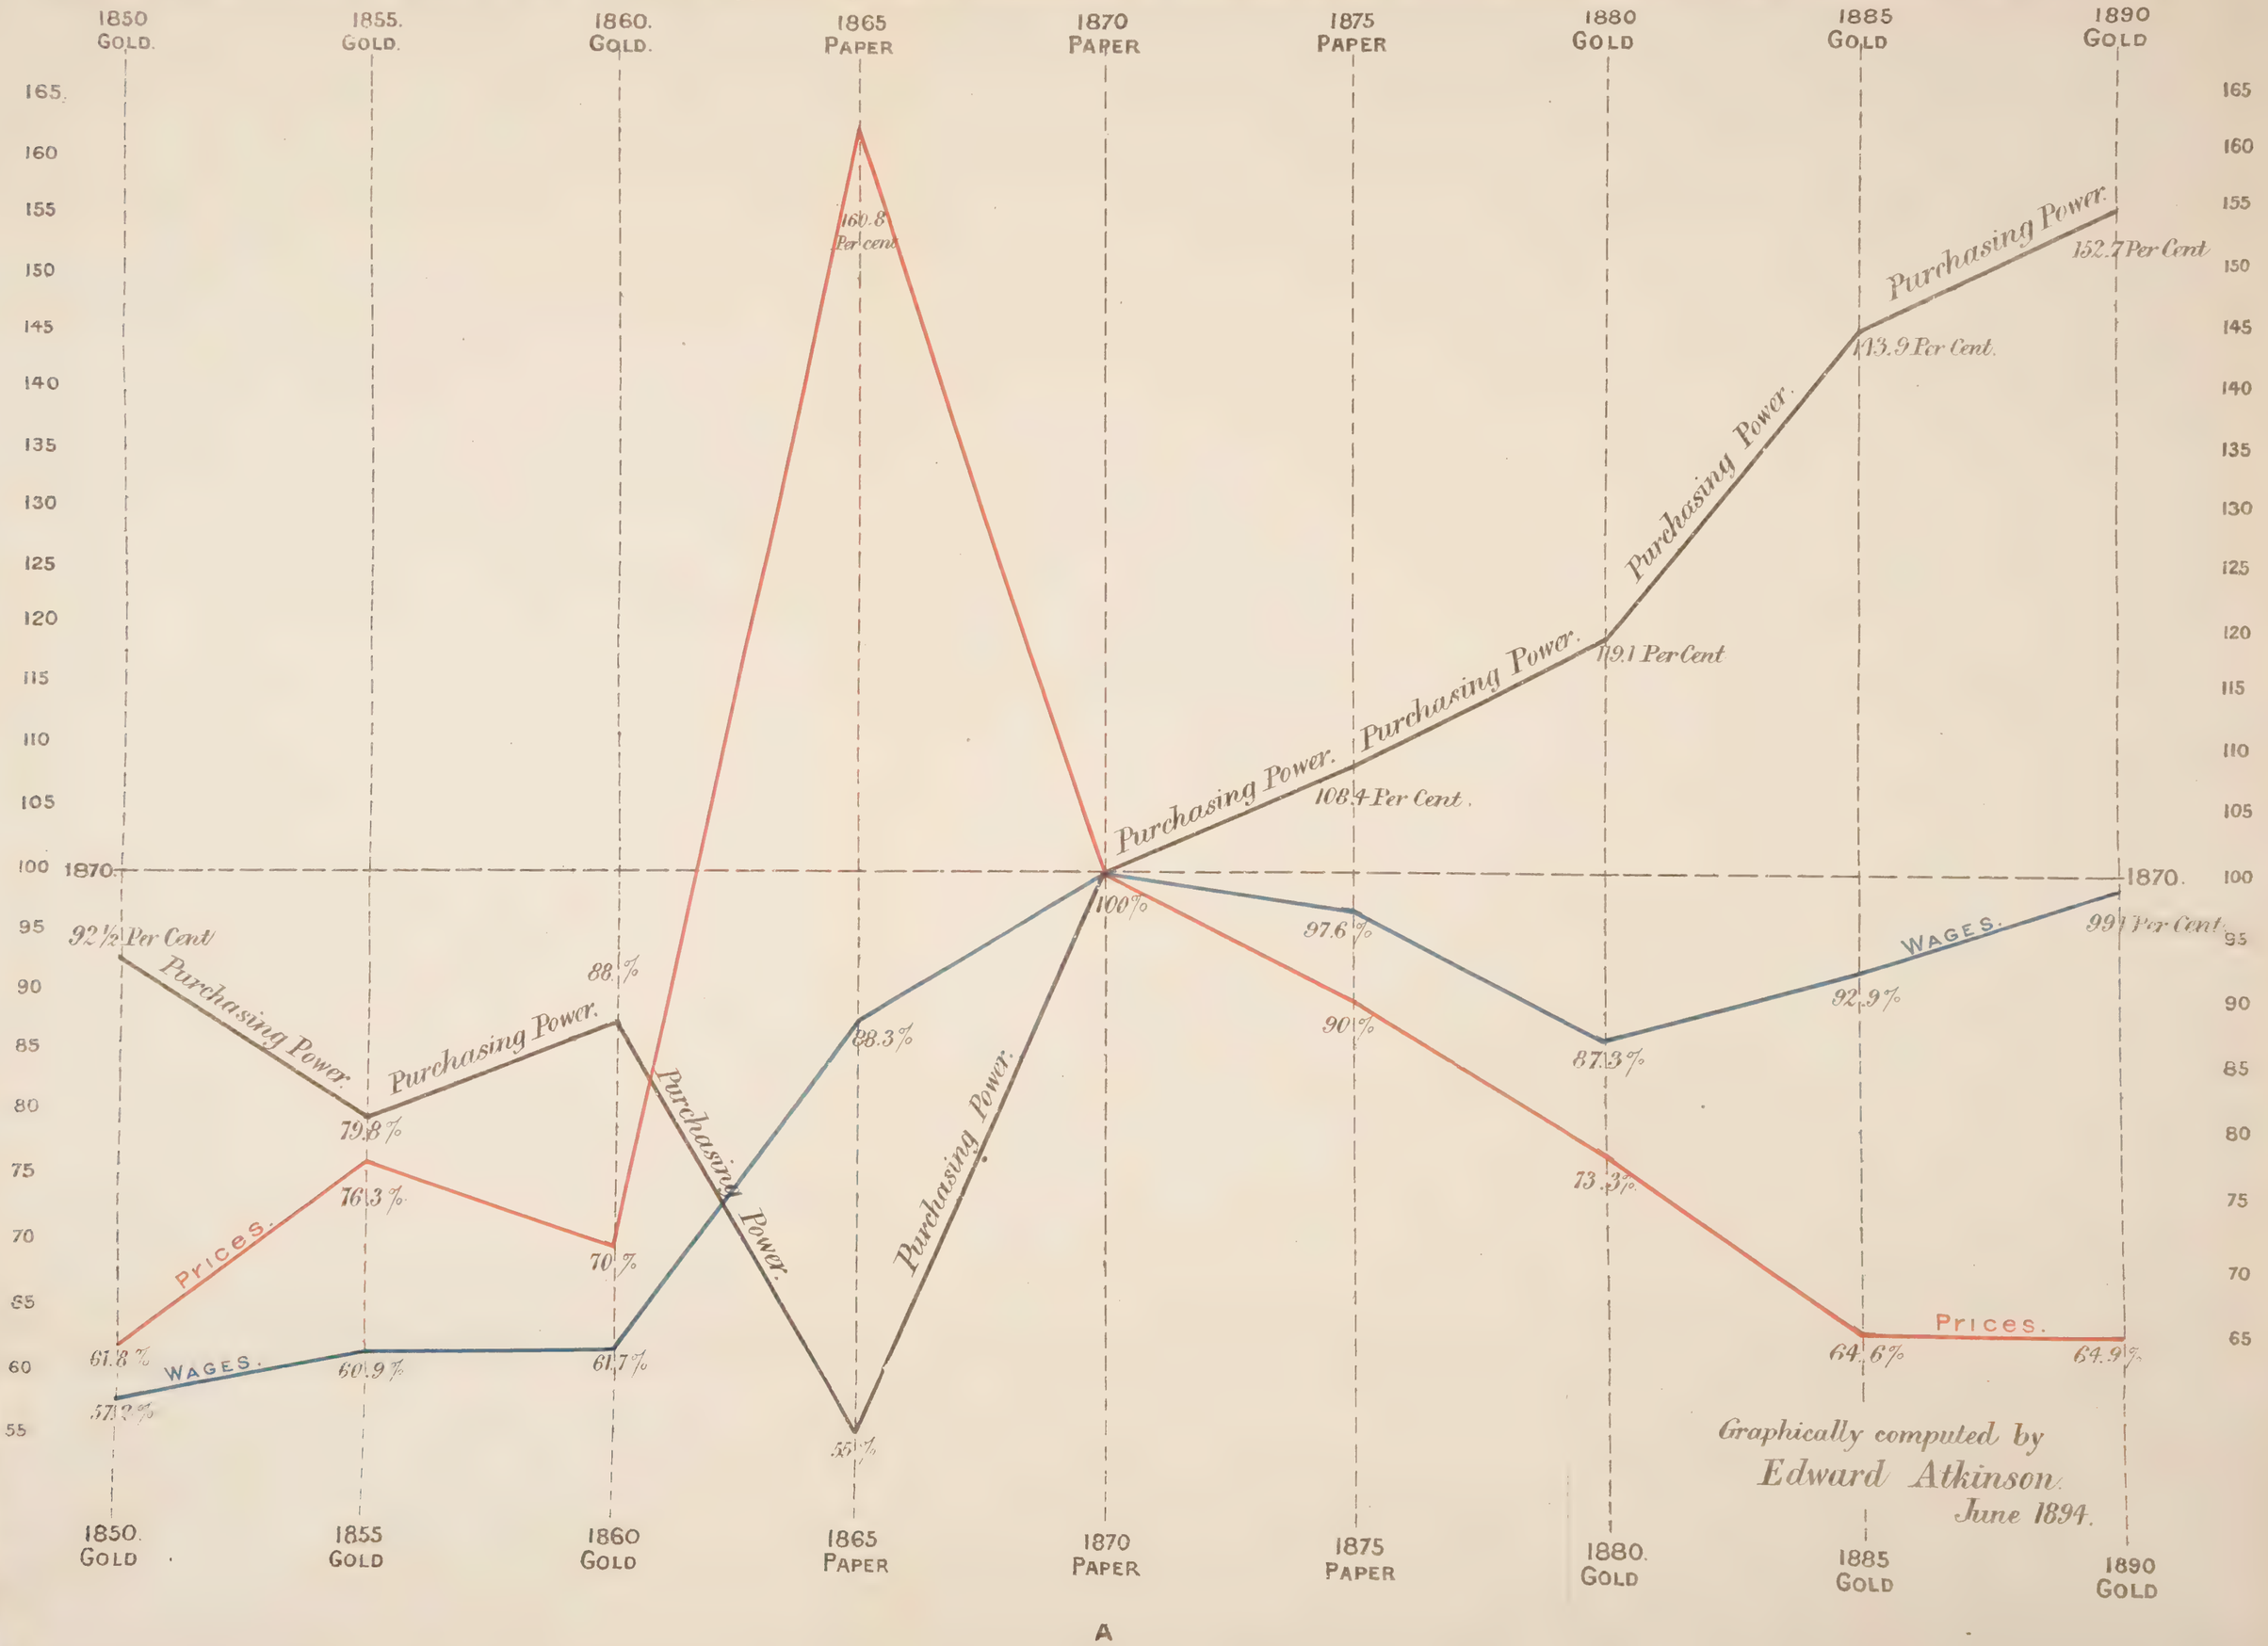
NOTE.—In calculating the amount payable for rates in 1893, 15 per cent. has been struck off the tithe to bring it to its rateable value. In nearly every case the actual allowance was much larger, and the amount paid as rates correspondingly less.

APPENDIX XVIII.

Handed in by M. E. Atkinson (See Ques. 32619.)

Purchasing Power of Wages. *Compared by Periods of Five Years.*

Comparison of the relation of wages and prices, coupled with the relative purchasing power of wages 1850 to 1890 inclusive. The standard of 1870 being taken at 100 on the three elements, the variations are from that initial point. The data for the table are taken wholly from the Senate Report on Prices and Wages for 52 years, compiled under the direction of Commissioner Carroll D. Wright. The digest of these statistics was made by Professor Roland P. Falkner. The wages are computed on all industries covered in the report. See Vol. I., page 174. The prices are on all articles treated in the report, averaged by Professor Falkner according to the relative importance in consumption. See Vol. I., page 93. The initial point taken at 100 by Professor Falkner is 1860. I have changed the initial point to 1870, and the line of purchasing power of wages dates from that year when the civil war had been over more than five years, and measures for restoring the specie standard on a gold basis had begun.



Graphically computed by
Edward Atkinson.

APPENDIX XIX.

(*Handed in by Mr. E. Atkinson. See Question* 32,951.)

CENSUS BULLETIN.

Statistics of Agriculture.

Department of the Interior,
Census Office,
Washington, D. C., March 15, 1894.

This bulletin, prepared under the supervision of Mr. W. H. Olcott, in charge of the division of agriculture of the Census Office, shows for the United States, by geographical divisions and by states and territories, the principal statistics of agriculture as obtained at the Eleventh Census.

In enumerating farms, no farm was reported of less than 3 acres unless $500 worth of produce had been actually sold from it during the year; and all land once ploughed was considered improved, unless afterwards abandoned for cultivation.

The value of products was estimated by the farmers when there was no exact account kept of the same.

The statistics relating to the cultivation of potatoes and hay do not appear in this bulletin, as their revision has not been completed.

The table shows the number, area, and valuation of farms in 1890, live stock on hand June 1, 1890, and the agricultural products for the year 1889. The figures are preliminary and subject to modification for final report.

Farms.

The total number of farms enumerated in 1890 was 4,564,641, as compared with a total of 4,008,907 in 1880, an increase of 555,734, or 13·86 per cent.

The total area of land in these farms in 1890 was 623,218,619 acres, 357,616,755 acres of which were improved. In 1880 there were 536,081,835 acres in farms, 284,771,042 acres of which were improved. Therefore, there was an increase of 87,136,784 acres, or 16·25 per cent., of the total land in farms, and 72,845,713 acres, or 25·58 per cent., improved.

The per-centage of the total land service in farms in 1890 was 32·79, as compared with 28·20 in 1880, and the per-centage of the total farm area that remained unimproved at the latter date was 42·62, as compared with 46·88 at the former.

The value of these farm lands, including fences and buildings, was in 1890 $13,279,252,649 and in 1880 $10,197,096,776, showing an increase of 30·23 per cent. in their valuation since 1880.

The value of farm implements and machinery in 1890 on these farms was $494,247,467, and in 1880 $406,520,055, showing an increase of 21·58 per cent. since 1880.

The value of live stock on hand June 1, 1890, on these farms was $2,208,767,573, and the value in June 1880 was $1,500,384,707, showing an increase of 47·21 per cent. since 1880.

In the year 1889 the value of farm products was $2,460,107,454, and in the year 1879 the value was $2,212,540,927, showing an increase of 11·19 per cent. since 1880.

Live Stock and Live Stock Products on Farms.

There were 14,969,467 horses on farms in 1890, which was an increase of 4,611,979, or 44·53 per cent., over the number reported in 1880. Of this number, 8,571,177, or 57·26 per cent., were reported in the North Central Division. There were 289,316 horses reported on ranges in 1890, making the total number, including both those on farms and on ranges, 15,258,783.

There were 2,295,532 mules and asses on farms in 1890, which was an increase of 482,724, or 26·63 per cent., over the number reported in 1880. Of this number, 1,093,722, or 47·65 per cent., were reported in the South Central division. There were 19,253 mules and asses returned as on ranges in 1890, making the total number, including both those on farms and on ranges, 2,314,785.

There were 57,409,583 swine on farms in 1890, which was an increase of 9,727,883, or 20·40 per cent., over the number returned in 1880. Of this number, 37,624,632, or 65·54 per cent., were reported in the North Central division. There were 15,704 swine reported as on ranges in 1890, making a total, including both those on farms and on ranges, of 57,425,287.

There were 1,117,494 working oxen, 16,511,950 milch cows, and 33,734,128 other cattle, making a total of 51,363,572 neat cattle on farms in the United States on June 1, 1890, as compared with 993,841 working oxen, 12,443,120 milch cows, and 22,488,550 other cattle, making a total of 35,925,511 in 1880. There is, therefore, an increase of 123,563, or 12·44 per cent., in the number of working oxen, of 4,068,830, or 32·70 per cent., in the number of milch cows, and of 11,245,578, or 50·01 per cent., in the number of other cattle, the increase in the total number of neat cattle on farms being 15,438,061, or 42·97 per cent. In addition to the above there were 6,285,220 neat cattle reported on ranges June 1, 1890, making a total of neat cattle on farms and ranges of 57,648,792.

The total production of milk on farms in the United States in the year ending December 31, 1889, was 5,209,125,567 gallons, equivalent to 315·48 gallons for each milch cow reported on June 1, 1890, and to 83·18 gallons per head of population.

The total production of butter on farms in the year ending December 31, 1889, was 1,024,223,468 pounds, as compared with a total of 777,250,287 pounds in 1879, and the total production of cheese 18,726,818 pounds, as compared with a total of 27,272,489 pounds in 1879, an increase of 246,973,181 pounds, or 31·78 per cent., in the production of butter on farms, and a decrease of 8,545,671 pounds, or 31·33 per cent., in the production of cheese on farms.

It should be borne in mind that the above figures for butter and cheese represent only that which has been produced on farms, and does not include the amount made in cheese and butter factories, the returns of which will appear in the report on manufactures, although the total of milk produced is shown.

The total number of sheep, exclusive of spring lambs, on farms in the United States on June 1, 1890 was 35,935,364. The number of fleeces shorn in the fall of 1889 and spring of 1890 was 32,126,868, yielding 165,449,239 pounds of wool, or an average of 5·15 pounds per fleece.

The total number of sheep on farms in 1880 was 35,192,074, yielding 155,681,751 pounds of wool, or an average of 4·42 pounds per fleece.

There was, therefore, an increase from 1880 to 1890 of 743,290, or 2·11 per cent., in the number of sheep, and of 9,767,488, or 6·27 per cent., pounds of wool.

In addition to the sheep and wool reported on farms there were 4,940,948 sheep and 25,828,845 pounds of wool reported on ranges, which would make a total of 40,876,312 sheep and 191,278,084 pounds of wool in the United States.

The figures appearing in this bulletin as to the amount of wool clipped are from the definite returns made to the Eleventh Census, and do not include the estimated amount of pulled wool, or of wool that might have been clipped in the summer of 1890 after the enumeration of June 1.

As the live stock on ranges in 1880 was largely estimated, there are no comparisons made in this bulletin, except for the live stock on farms. The following statement will show the live stock on ranges in the United States in 1890 as gathered by special agents :—

Horses	289,316
Mules and asses	19,254
Swine	15,704
Neat cattle	6,285,220
Sheep	4,940,948

Fibres.

The total area devoted to the production of cotton in the United States in 1889 was 20,175,270 acres, and the total production in the fall of 1889 and the early winter of 1889–90 was 7,472,511 bales of 477 pounds net, amounting to 3,564,387,747 pounds, an average of 176·67 pounds to the acre.

In 1879 the total area devoted to cotton was 14,480,019 acres and the total production 5,755,359 bales of 453 pounds net, amounting to 2,607,177,627 pounds, an average of 180·05 pounds to the acre.

There is therefore an increase of 5,695,251 acres, or 39·33 per cent. in the area, and 957,210,120 pounds, or 36·71 per cent. in the production.

The returns which were made to the Census Office in bales have been reduced to pounds, in accordance with the figures appearing in the statistical abstract, prepared by the Bureau of Statistics of the United States Treasury Department in 1890. It will be noted that the weight per bale is heavier in 1890 than in 1880.

There were 1,318,698 acres devoted to the cultivation of flax in the United States in 1889, 1,301,137 acres, or 98·67 per cent. being in the North Central division. There were 10,250,410 bushels of flaxseed produced, 98·40 per cent. of which was in the North Central division. There were 241,389 pounds of fibre produced, 72·09 per cent. of which was in the North Central division.

There were 25,054 acres devoted to the cultivation of hemp in the United States in 1889, 23,468 acres of which, or 93·67 per cent. were in the state of Kentucky, the total production in the United States being 11,511 tons, 10,794 of which, or 93·77 per cent., were in the state of Kentucky, Illinois being the only other State producing over 100 tons.

Cereals.

The area devoted to the cultivation of cereals in the United States in 1889 was 140,217,545 acres, and the total production of cereals 3,518,816,904 bushels, such acreage and production being distributed among the different cereals as follows:—

Products.	Acres.	Bushels.
Corn	72,087,752	2,122,327,547
Wheat	33,579,514	468,373,968
Oats	28,320,677	809,250,666
Barley	3,220,834	78,332,976
Rye	2,171,604	28,421,398
Buckwheat	837,164	12,110,349

This area of 140,217,545 acres is an increase of 21,585,766 acres, or 18·20 per cent. since 1879. This increase, however, is not keeping pace with the growth of population, which increased 24·86 per cent. between 1880 and 1890, the area per capita being 2·24 acres as compared with 2·37 at the Tenth Census, a decrease of 0·13 acres per capita. There has been an increase in the production of cereals since the Tenth Census of 821,236,675 bushels, or 30·44 per cent., the total production per capita being 56·19 bushels as compared with 53·78 bushels at the Tenth Census, showing an increase of 2·41 bushels per capita.

Of the area under cereals in the United States in 1889, 51·41 per cent. was under corn, 23·95 per cent. under wheat, 20·20 per cent. under oats, 2·29 per cent. under barley, 1·55 per cent. under rye, and 0·60 per cent. under buckwheat, as compared with 52·57 acres under corn, 29·87 acres under wheat, 13·61 acres under oats, 1·68 acres under barley, 1·55 acres under rye, and 0·72 acres under buckwheat in every 100 acres under cereals in 1879.

Tobacco.

There were 695,301 acres devoted to the cultivation of tobacco in the United States in 1889, yielding a product of 488,256,646 pounds, an increase of 15,595,489 pounds since 1879.

Rice.

There were 161,312 acres in the United States in 1889, devoted to the cultivation of rice, all of which were reported from 10 States, principally from Louisiana and South Carolina, the production amounting to 128,590,934 pounds.

The table following also contains statistics relating to the cultivation of hops, broom corn, pulse, and peanuts.

Carroll D. Wright,
Commissioner of Labour in charge.

APPENDIX XX.

Appendix A, XX.

(*Handed in by Mr. E. Atkinson. See Question* 32,951.)

EXTRA CENSUS BULLETIN.

Statistics of Farms, Homes, and Mortgages.

Ownership and Debt—Summary for 22 States and Territories.

Department of the Interior,
Census Office,
Washington, D.C.,
November 28, 1893.

Sir,

For the purpose of bringing together the more important results of the investigation of farm and home proprietorship and indebtedness in the 22 states and territories for which the returns have been tabulated, this bulletin has been published, with details for the states and territories and for the 170 cities and towns in them having a population of more than 8,000.

In regard to farms, the conclusion is that 32·30 per cent. of the farm families hire, and 67·70 per cent. own the farms cultivated by them; that 30·22 per cent. of the farm owning families own, subject to incumbrance, and 69·78 per cent. own free of incumbrance. Among 100 farm families, 32 hire their farms, 21 own with incumbrance, and 47 without incumbrance. On the owned farms there are liens amounting to $290,481,192, which is 35·44 per cent. of their value, and this debt bears interest at the average rate of 6·94 per cent., making the annual average interest charge $78 to each family. Each owned an incumbered farm, on the average, is worth $3,190, and is subject to a debt of $1,130.

The corresponding facts for homes are that 63·25 per cent. of the home families hire, and 36·75 per cent. own their homes; that of the home owning families 71·12 per cent. own free of incumbrance, and 28·88 per cent. with incumbrance. In 100 home families, on the average, 63 hire their homes, 11 own with incumbrance, and 26 without incumbrance. The debt on owned homes, aggregates, $331,628,030, or 40·53 per cent. of their value, and bears interest at the average rate of 6·03 per cent., so that the annual amount of interest to each home averages $80. An average debt of $1,319 incumbers each home, which has the average value of $3,254.

There are 161 cities and towns in these states and territories in the class of those having a population of 8,000 to 100,000, and in these cities 67·37 per cent. of the home families hire, and 32·13 per cent. own their homes, and of the home owning families, 37·03 per cent. own with incumbrance, and 62·97 per cent. own free of incumbrance. In 100 home families, on the average, are found 68 that hire their homes, 12 that own with incumbrance, and 20 that own without incumbrance. The liens on the owned homes are 41·89 per cent. of the value of those subject to lien. Several averages show that the rate of interest is 5·82 per cent.; value of each owned and incumbered home, $3,837; lion on the same, $1,607, and yearly interest charge on each home, $94.

In the nine cities having a population of more than 100,000, 74·15 per cent. of the home families hire, and 25·85 per cent. own their homes; 38·51 per cent. of the home owning families have incumbrance on their homes, and 61·49 per cent. own and occupy homes free of incumbrance. Among 100 families, on the average, 74 hire, 10 own with incumbrance, and 16 without incumbrance. Averages for each owned and incumbered home: incumbrance, $1,967; value, $4,883; interest charge for one year, $117; rate of interest, 5·94 per cent. Homes are incumbered for 40·28 per cent. of their value.

Real estate, purchase, and improvements, when not associated with other objects caused 74·56 per cent. of the farm debtor families to incur 77·38 per cent. of the farm debt, and 81·98 per cent. of the home debtor families to incur 81·52 per cent. of the home debt.

Very respectfully,
Carroll D. Wright,
Commissioner of Labour in Charge.

The Secretary of the Interior.

express with greater accuracy the change in the yield of Flour from a given quantity of Wheat, the result of the gradual adoption of

† Not separately enumerated in these years.

Appendix C.

APPENDIX C.

STATEMENT SHOWING THE NUMBER OF PERSONS ENGAGED IN AGRICULTURAL OCCUPATIONS IN GREAT BRITAIN ACCORDING TO THE CENSUS RETURNS OF 1871, 1881, AND 1891.

NOTES.

* In the Census of 1891 persons who were in the Census Returns of 1871 and 1881 classed under "agricultural labourer, farm servant, and cottager" were given under two heads, viz., "agricultural labourer, farm servant" and "horsekeeper, horseman, teamster, and carter." The *italic* figures in the 1891 column show the number of the latter and the Roman figures the number of the former class.

† The persons classed under "groom, horsekeeper, horsebreaker" in the Census Returns of 1871 and 1881 are included with "coachman, cabman, groom, &c." in the Returns for 1891 and have therefore not been given in the above table.

‡ In the Census Returns of 1871 and 1881 gardeners were shown partly in the domestic class and partly in the agricultural class, but in the Returns for 1891 they were all included in the agricultural class. The figures in the above table for 1871 and 1881 include both classes.

In 1891 only persons of and above 10 years of age are included in the occupation Returns of England and Wales, and the same is believed to be the case in the Returns for Scotland.

In the Census Returns for Scotland for 1881 and 1891 farmers' sons under 15 years of age were included with children or scholars, and in order that the numbers in the above tables may be comparative, only farmers' sons of and above 15 are included in the 1871 figures.

SUMMARY STATEMENT of the NUMBERS of PERSONS engaged in the under-mentioned occupations (principally agricultural) in ENGLAND and WALES according to the CENSUS RETURNS of 1871, 1881, and 1891.
